Survey	FuelsEurope	Business association (other than association of financial institution)	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	FuelsEurope	Business association (other than association of financial institution)	Belgium	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. I disagree	•ESRS E2 and E4: raise concerns due to the level of detail required and the potential for excessive disaggregation. These requirements could result in disproportionate reporting efforts, especially for large companies, and may not yield meaningful insights for stakeholders. •In particular, ESRS E2 AR 2 expands pollutant reporting to include not only Annex II of Regulation (EU) 2024/1244 (Industrial Emissions Portal) but also pollutants it measures and monitors based on environmental permits. This would significantly increase the reporting burden, requiring companies to track and assess pollutants without clear thresholds, unlike the E-PRTR list, and would complicate materiality assessments. •We recommend that undertakings have the flexibility to define the level of disaggregation needed to reflect the nature of the company's impacts, risks and opportunities.

I disagree	•ESRS E2 and E4: raise concerns due to the level of detail required and the potential for excessive disaggregation. These requirements could result in disproportionate reporting efforts, especially for large companies, and may not yield meaningful insights for stakeholders. Concerning ESRS E4, we have concerns about AR8, which introduces the concept of 'near' a site, requiring site level analysis to determine the buffer zone. This could lead to excessive disaggregation – providing little insight for stakeholders and substantive work for report preparers. •We recommend that undertakings have the flexibility to define the level of disaggregation needed to reflect the nature of the company's impacts, risks and opportunities.

I partially agree and partially disagree	•Social standards the removal of the term "severe" from the disclosure requirements for human rights incidents across the social standards is particularly critical. If we are not able to limit the perimeter of human rights incidents to the most severe cases, considering the magnitude of the human rights subject, we risk having to disclose even less relevant aspects; this consequence, in addition to creating confusion when selecting the fact to be reported, would be contrary to the spirit of simplification of the ESRS amendments. Maintaining a focus on severe human rights incidents is essential to ensure that reporting remains meaningful, proportionate, and aligned with the principles of relevance and efficiency. •S1 Own Workforce: Exclude "non-employees" from S-1 Own workforce reporting. Non-employees are implicitly covered under S-2 as they are contractors (i.e., workers in the value chain). Treating non-employees as part of own workforce can have legal implications. Furthermore, metrics for non-employees are monitored and stewarded as part of site contractor management programs and policies. Itemizing the metrics for this group of site contractors requires a major system and work process revision across all operating and/or office assets.

I agree	•Indirect Business relationships: should only include those directly linked to the undertaking's business operations, products or services. •Human rights incident: should only include confirmed incidents, and not those that are still under investigation at the end of the reporting period. •Risks: should be qualified to material risks. Value chain: limit the scope of the impact materiality assessment to entities in the value chain for which the undertaking has a direct contractual relationship. Large multinational organizations are operating within highly complex and expansive value chains. Tracking and assessing impacts beyond direct contractual relationships presents significant practical and operational challenges, particularly in the absence of consistent data availability and supplier transparency.

Survey	FuelsEurope	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		•We would like to highlight once more that the costs associated with compliance still remain significantly substantial, even when factoring in the proposed amendments to the revised ESRS. •EFRAG should replace all instances of "shall disclose" with "may disclose" to enable reporting entities to apply materiality-based judgments and avoid unnecessary or irrelevant disclosures. •Reporting Boundary: We welcome the relief clause of paragraph 92 ESRS 1 (data of joint operations). If this relief clause were to be deleted, it is essential that it is explicitly stated that for fair presentation, for specific sectors, environmental data can be disclosed on an operated boundary. Furthermore, it would be welcome to allow for GHG to report on any boundary mentioned in the GHG protocol, to be in line with the most relevant international framework on GHG and to align with ISSB. •SOC/SVHC. It is still extremely complicated to consolidate the quantities of these kinds of substances as also for SOC it is very difficult. to classify It makes sense to disclose which SOC/SVHC substances are being used and what the company is doing to replace or reduce their use, rather than collecting quantities, which is very complicated given the wide variety of regulations across countries — including differences in usage limits for mixtures containing these substances.			
Survey	FuelsEurope	Business association (other than association of financial institution)	Belgium	35.E1-1.	Do you agree with the amendments of this chapter?	I disagree	•Application Requirements are far from a simplified approach. It is prescriptive in nature and pressures companies to make uneducated guesses on future economic outcomes	E1	Disclosure Requirement E1-1 - Transition plan for climate change mitigation

I partially agree and partially disagree	•We oppose the new definition of "human rights incidents" and its extension to new ESRS.	S2	Disclosure Requirement S2-4 - Targets related to value chain workers	
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The new procedure is more complicated than the previous requirements and would lead to additional workload. Materiality should generally be determined based on net effects, analogous to the assessment carried out as part of the risk inventory in bank risk management. If the net effects are not considered material, there should be no reporting obligation. If, on the other hand, they are considered material, the net effects and, where applicable, significant measures taken or planned, should be reported. This approach appears sufficient, also from the user perspective. An artificial distinction between different time horizons should not be enforced, as the added value of specifying the period in which a topic became material appears questionable. The NMIG could include examples that are helpful in distinguishing between potential and actual effects. A decision tree to support the logic in appendix C would be helpful.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The option to include a summary at the beginning of the CSRD disclosure is helpful. As it allows users to get an overview quickly. The increased use of appendices could also improve readability, while clearer references would help shorten the sustainability statement without risking any loss of information. Nevertheless, there is still room for improvement in terms of flexibility and striking the right balance between financial and sustainability reporting. We also note that many requirements have been merely summarised rather than simplified, leading to greater complexity and less clarity in discussions with external auditors. Already published concise CSRD reports confirm that the ESRS Set 1 was not the only reason for overly detailed reporting. The individual expectations of the auditors have also contributed to this. Simplifications should therefore focus not only on the report itself, but even more on the process of creating the CSRD report and documentation.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The new architecture and interdependencies appear more streamlined overall, but the implementation effort for entities that have already started ESRS reporting is considerable. The removal of GOV, SBM and IRO from the thematic standards is a positive step and the amended wording makes the GDRs less restrictive. However, the renaming of notions, changes in the numbering of reporting requirements and inconsistent headings in the table of contents are problematic, particularly for the metrics in the social chapter. These amendments would lead to a high level of subsequent adjustment burden for first reporting wave entities. Amendments that increase the burden for reporting entities in the long term should be avoided. A one-off increase in the effort required may be justified for reasonable and necessary modifications, but the cost-benefit aspect should always be taken into account.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The revised structure of the ESRS is generally positive, particularly the clear arrangement of the application requirements (AR) directly after the disclosure requirements (DR), the deletion of 'may disclose' data points and the consistent conversion of 'shall' data points, which contribute to greater stringency. However, language comprehension remains a challenge, since many passages have been significantly condensed, require repeated reading and are sometimes less clear. Extensive changes to the numbering, particularly in the E and S standards, would cause additional adjustment workload, which is why cost-benefit aspects should be taken into account. In addition, some titles disclosure requirements (DRs) for metrics in the S1 standard are inconsistent, we would prefer uniform terminology, analogous to the G standard ('metrics related to ...'), in order to ensure consistency and comprehensibility.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We consider the conceptual basis of the NMIG to be comprehensible and meaningful, and its illustrative and non-binding nature should certainly be retained. We are against it being included in the delegated act because the granularity and the overall extent of the ESRS are already considered sufficiently broad. It is also important that the NMIG is not used to introduce new auditing requirements or to allow interpretations by auditors that lead to increased documentation and reporting obligations. An explicit clarification is crucial.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The proposed amendments are appreciated. The stronger focus on the principle of proportionality, greater flexibility in considering the value chain and the move away from systematically favouring primary data over estimates are particularly welcome. We also consider the concept of "undue cost and effort" a sound and practical approach as it enables entities to avoid disproportionately costly data collection. However, this requires uniform auditing standards in order to avoid extensive discussions with external auditors. In addition, the long-term use of estimates without mandatory annual updated assessment should be permitted, as otherwise this would negate the intended simplification. Another positive aspect is the option to postpone reporting on new investments or subsidiaries until the next reporting period. This represents a practical reduction in workload. We consider the planned consolidation of disclosure requirements DR SX-2 and SX-3 into a single DR SX-2 to be possible in the long term, as it brings together thematically related aspects such as engagement, reporting channels and corrective measures. At the same time, however, we would highlight the considerable implementation effort involved in renumbering all DRs in standards S1 to S4 – particularly with regard to external and internal documentation. We would welcome a reduction in the effort involved here. A balance between burden and benefit is still required. Adjustments should only be made where they generate long-term added value. Overall, we are in favour of the draft in key areas, although individual aspects should be made clearer and more practical.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The proposed simplifications create meaningful flexibility for reporting and are consistent with the requirements of IFRS S1 and S2, which we welcome. Particularly noteworthy is the introduction of the principle of "undue cost or effort", as it supports pragmatic implementation. In addition to the option of partial coverage, a purely qualitative disclosure should also be permitted, provided that it is sufficiently transparent and meaningful. At the same time, efforts should be made to improve data quality. This is particularly relevant for financial institutions that rely on improved customer data for both regulatory requirements and strategic management. In order to ensure transparency and promote continuous further development, the application of the simplifications could therefore be accompanied by regular, though not necessarily annual, reassessment that are proportionate in terms of cost and benefit.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Our preferred option is definitely Option 2 because it allows for a more practical and less costly implementation. Quantifying financial effects is very challenging by now, therefore the focus should be more on qualitative information. Option 2 simplifies reporting and significantly reduces the amount of documentation required. Nevertheless, if another option is to be applied, it must be ensured that existing internal processes and calculation systems can continue to be used unchanged. There must be no obligation to develop additional calculation logic or provide new datapoints that go beyond existing structures. When adjusting requirements to anticipated financial effects, the EBA guidelines should also be taken into account. The Guidelines on ESG Risk Management (Section 28 a) vi.) explicitly require financial institutions to collect information from their customers ("large counterparties") on the current and expected financial impact of environmental risks and opportunities. However, quantification is not required there and in many cases the effects cannot even be calculated within a particular range. In addition, financial institutions would depend on data from their customers, most of which do not fall within the scope of the CSRD. We are therefore strongly in favour of Option 2. The modelling of Option 1, the verification of the results and their disclosure would create significant problems – ranging from technical complexity to competition concerns. Should Option 1 nevertheless be implemented, it is necessary that AR 17 for paragraph 23 is part of the main bodies.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	As for expected financial effects we generally prefer Option 2. The current requirements for the reporting on climate-related financial effects under the ESRS are considered too far-reaching, unclear and potentially problematic. We are in favour of a stronger focus on the existing regulatory requirements of the EBA and other supervisory authorities, without introducing additional quantitative datapoints. In cases of doubt, it should be possible to assess the relevance both from the perspective of financial institutions in general and of the respective bank individually, with the decision-making power on assessment and disclosure remaining with the reporting entity. The required disclosures are challenging to implement in practice as they are not compatible with the current system logic and, in some cases, relate to sensitive strategic information. In addition, some ESRS requirements are legally vague and pose a risk of being misinterpreted and of legal liability. Overall, we are calling for differentiated, risk-oriented and practicable simplification of the requirements that realistically take into account how institutions actually deal with physical and transition risks and opportunities, without creating new disclosure requirements that go beyond current business practices or jeopardise strategic positioning.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We welcome the improved interoperability between ESRS and ISSB. Interoperability creates consistent and reliable data, irrespective of the framework used, thereby bolstering confidence in the information used for analysis and reporting. Wording adjustments will contribute to better common understanding and greater comparability. In addition, EFRAG should provide an updated table with a complete 1:1 mapping that is more detailed than the previous one and shows, at the level of each individual datapoint, which ESRS requirements simultaneously comply with reporting requirements under IFRS S1 and S2. Without such a table, each single reporting entity would be forced to carry out a time-consuming comparison at datapoint level to demonstrate compliance with IFRS S1 and S2, in addition to ESRS compliance.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We generally consider the reduction of mandatory datapoints to be a step in the right direction. However, the announced reduction in the number of datapoints wouldn't lead to a siginificant reduction of reporting efforts, which is more likely to be moderate to minimal. This is partly because many removed datapoints were already classified as non-material in the first report. On the other hand, the expected simplification is offset by the effort required for the implementation of modificationsand by largely unchanged expectations regarding auditing processes and documentation. However, we appreciate the efforts to strike an acceptable balance between workload and information value. Due to comprehensive regulatory requirements, such as the EBA Guidelines on ESG Risk Management, as well as data requirements for strategic management (portfolio, risk, etc.), financial institutions depend on prompt and continuous improvement of customer data. These needs should be taken into account when removing data points. We are interested in a permanently established core set of decision-useful data that does not need to be adjusted regularly. Continuity is the key to a robust reporting framework that aims to provide meaningful information over time.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	E4: We support the proposed wording and preconditions for the disclosure of the biodiversity transition plan. G1-2: 10c: With regard to the management of suppliers' relationships, it seems sensible for consistency reasons to include a separate chapter on metrics. The materiality of training of the procurement team should be considered independently of other training topics, as the relevance may vary depending on the sector. In the financial sector, the data point is often considered not material compared to other issues.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The introduction of the 'fair presentation' concept could be positive but will only work if auditors confirm it as a pragmatic, simplified approach to ESRS implementation. Corporate reporting should be principles-based to ensure focused, decision-useful information. However, the legal basis of the European Sustainability Reporting Standards (ESRS), the Accounting Directive (2013/34/EU), is compliance-oriented. Article 34(1)(2)(aa) explicitly requires adherence to its provisions. The double materiality analysis reflects a rules-based approach driven by datapoints requiring disclosure when material. We are critical of the interplay between entity-specific disclosures, double materiality with its broad stakeholder focus (unlike IFRS S1/S2), and the unclear definition of 'fair presentation' in the sustainability context. Together, these create a risk of uncontrolled expansion of reporting, undermining ESRS's political goal of simplification and proportionality. Ensuring 'fair presentation' could require additional processes. Under the compliance-driven approach, auditors expect checklist-style assessments that may include irrelevant information. This risks overburdening reports and reducing their usefulness. On the one hand, ESRS could help companies strengthen ESG practices. On the other, it remains a comprehensive framework with disclosures of questionable decision-making relevance. Thus, 'fair presentation' could become just another criterion leading to debates with auditors. It must therefore be clarified that within ESRS, 'fair presentation' is meant to streamline reporting and processes, not create an extra hurdle. Including concrete examples (e.g., in NMIG or the basis for conclusions) would highlight its beneficial effects and ensure the concept supports simplification rather than complication.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Absolute emissions targets are crucial in the real economy for assessing actual emission reductions and compliance with climate targets. They allow for transparency and for progress to be tracked credibly. However, indirect emissions, particularly financed Scope 3 emissions, are by far the largest emission driver for financial institutions. The direct influence on the emissions of counterparties and their value chains is limited, meaning that absolute targets could potentially suggest a misleading direct influence. In addition, the heterogeneity of portfolios makes it difficult to meaningfully compare absolute target values. Intensity targets, whether physical or economic, and sectoral reduction pathways are considered more appropriate for aligning with EU climate targets and presenting developments transparently. Since over 90% of greenhouse gas emissions from financial institutions are attributable to financing activities, intensity targets provide a realistic and comparable basis for assessing progress towards net zero. A comprehensive disclosure framework should therefore cover the intensity evolution as well as the long-term net-zero strategy and relevant interim targets.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	The new disclosure requirement (DR) is suitable not for every reporting entity. The change from 10% to "Top 10" could lead to excessive and misleading information, for example if a country with very few employees is included in the list. In addition, there are businesses that are represented in fewer than ten countries. It should therefore be clarified that the list may be correspondingly shorter. It should also be made explicitly clear that countries should only be indicated in which both more than 50 employees and more than 10% of the total workforce are employed. This clarity is currently lacking in AR 11. We suggest that the type and granularity of the breakdown should not be made mandatory, as key figures at group level are usually more commonly used and are more meaningful.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We welcome that "minimum wage" is relevant in the first step and is not to be preceded by a comparison with "collective bargaining agreements". However, the following issues remain unresolved: For "living wage estimate produced by an institution mandated by the public authorities of the country", a specific provider should be named or provider lists should be published, e.g. by ILO. It is unclear what auditing steps are required to ensure compliance with ILO standards with regard to minimum wages. It should be clarified that own calculations are permitted if no such benchmarks incorporating ILO standards are available.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	It is crucial that all the information on Principal Adverse Impact (PAI) that must be disclosed by financial market participants in accordance with SFDR, can continue to be derived from the CSRD reports of portfolio companies even after the ESRS amendments. It is therefore particularly important that reporting obligations under the SFDR are harmonised with disclosure requirements for undertakings under the revised ESRS. Financial market participants, such as asset managers, should not be required to provide information that goes beyond the obligations of non-financial undertakings. The alignment of ESRS and PAI is important particularly given the upcoming SFDR review. We see the integration of Human Rights Policy in ESRS 2 as positive. At the same time, there is a need to clarify the scope of application for "human rights incidents" in ESRS S1 16: It is not clear whether this also applies to ESRS S2 because there is no corresponding mention of it in Appendix 6 of the BfC. Furthermore, it should be clarified in the application notes for ESRS S3 and ESRS S4 that ESRS S1-16 applies to human rights incidents under S3 and S4. There should be greater coherence between the SFDR and CSRD in order to reduce regulatory complexity.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	The current wording is closely oriented on the area targets according to Global Biodiversity Framework (GBF). However, there is empirical evidence to suggest that area alone does not automatically lead to a positive contribution for biological diversity and functioning ecosystems. It would therefore be sensible to also take into account the targeted stabilisation or improvement of the 'state of nature' i.e. the status of species and ecosystem functions. The focus should not be placed exclusively on rare or endangered species, as the decline in flora and fauna affects the entire range (keyword: population protection). We propose the following amendment to AR26 (amendments are marked in CAPITAL LETTERS): Measurable targets related to biodiversity and ecosystems may, for example, refer to the following aspects: •Size and location of all habitat areas IN WHICH THE STATE OF NATURE IS PROTECTED OR HAS BEEN restored, whether directly or indirectly controlled by the undertaking, and whether the success of the restoration measure was or is approved by independent external professionals; •Recreated surfaces ((environments in which management initiatives are implemented so as to create a DIVERSE habitat WITH BIODIVERSITY THAT IS SPECIFIC OF THE LOCATION where it did not exist initially); •Number or percentage of projects / sites whose ecological integrity was improved (e.g., installation of fish passes, wildlife corridors). The addition of "specific to the location" is important since otherwise any change, including those that would not serve to protect nature (e.g. the planting of non-native species or faunal distortions), could be considered renaturation. Given the dynamic development in this area, it would seem sensible to promote the application of a standard recognised in this sector, instead of making the requirements mandatory.

Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The removal of voluntary datapoints as part of the disclosure requirements seems reasonable since it contributes to simplification and standardisation. Nevertheless, the option to voluntarily publish the adjusted Gender Pay Gap (GPG) should remain in place. Adjusted GPG provides a significantly more differentiated interpretation of the mandatory unadjusted GPG, since it takes into account characteristics that determine salary levels, such as the organisational unit, the job performed and the hierarchical classification (e.g. level of responsibility, pay scale group, management level). As a result, structural distortions that may be included in the unadjusted value are largely excluded. The disclosure of adjusted GPG therefore contributes to a more appropriate assessment of any pay differences and increases the transparency and traceability of the remuneration structures. Even though this metric is voluntary, the disclosure is useful since it provides a more realistic picture and prevents the unadjusted value being misinterpreted. An example of the calculation logic should be presented in the application notes (NMIG), whereby the data point should be allowed to be disclosed as entity specific data point without additional justification. The removal of the mandatory adjusted gender pay gap is reasonable, as calculating it at group level could be very complex and require clarification, different remuneration structures could have a distorting effect and conflicts with the Pay Transparency Directive may arise. Instead, entities should be allowed to voluntarily disclose their adjusted Gender Pay Gap by country and, where applicable, also take into account the cost of living.			
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

I partially agree and partially disagree				
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	German Banking Industry Committee (GBIC)	Association of financial institutions	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Anticipating that the final publication of the new ESRS will be most likely in the second half of 2026, the first application date should be 31 December 2027. However, there should be an option to apply the new ESRS for the reference date 31 December 2026. The Excel list of datapoints (IG 3) should be updated first immediately after the final report has been transmitted to the European Commission and then again as part of the announced four-week consultation period. For the first wave undertakings, it is particularly important to receive a final and reliable version of the Excel list with all the deleted datapoints ASAP. EFRAG should ensure that the transition from the 'old' to the 'new' requirements is as seamless as possible. To achieve this, it would be useful to provide an overview table that also shows which concepts and terms have been revised. The overall aim of the review of the ESRS to reduce reporting burdens significantly has largely not been achieved with the ESRS proposal. Undertakings who already submit ESRS reports assume a reduction of around 10% according to an initial indicative estimate. However, the implementation effort to switch from 'ESRS 1.0' to 'ESRS 2.0' is enormous. We had expected a significantly more ambitious reduction in reporting effort.

Survey	CSEAR; Universidad de Burgos	Academia	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	The proposed amendments did not achieve an acceptable balance between simplification and robustness of the DMA. While point (a) in the definition of double materiality is clear, point (b) is imprecise. a)Point (b) is tautological: "Information is MATERIAL when: (…) it is necessary (…) to understand (…) MATERIAL impacts, risks and opportunities …" (emphasis added) b)The inclusion of "risks and opportunities" in point (b) is inconsistent with the notion of impact materiality, as illustrated in different parts of the same ESRS 1 (e.g., paragraphs 3 and 30). c)Point (b) refers to the "understanding" of sustainability reporting users, without reference to the implications of such understanding. d)Additionally, in paragraph 30 impact materiality correctly refers to "the identification of information that relates to the undertaking's material actual or potential, positive or negative impacts on people or the environment over the short, medium or long term (…) Business relationships are not limited to direct contractual relationships." Consequently, any framing of impact materiality based on decision-making is insufficient, since many of the stakeholders are not in a position to make any decision (e.g., nature or future generations). Therefore, if the "understanding" and the "decision-making" framings of impact materiality are unsuitable, a possible framing for point (b) could be based on the notion of stewardship and due diligence. An alternative wording is suggested: "(b) it is necessary for the corporation to show to a broad range of stakeholders that it identifies and addresses actual or potential, positive or negative impacts on people or the environment"			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	CSEAR; Universidad de Burgos	Academia	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	CSEAR; Universidad de Burgos	Academia	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	The simplification of ESRSs and the reduction of disclosure requirement and data points is premature. Companies, auditors and consultants have already invested in the implementation of ESRSs. However, the untimely revision will waste the learning that could be obtained from this experience. No less important, in general, the loss of the knowledge and positive externalities generated by the preparation, analysis and use of sustainability information and the increase in social and environmental regulation costs (e.g., government monitoring in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from the ESRS simplification. The re-architecture between ESRS 2 and thematic standards reduces enforceability and comparability because although minimum "Shall" requirements are maintained in ESRS 2, their simplification weakens the common baseline and opens the door to overly flexible interpretations across companies and sectors. The elimination of the obligation to declare PAT plans and timelines diminishes forward-looking guidance and monitoring capabilities. Additionally, this omission limits the capacity of information users to evaluate the commitment of reporting organizations in achieving their stated sustainability goals.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	CSEAR; Universidad de Burgos	Academia	Spain	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is reasonable to include guidelines and examples on how to disclose datapoints in "Non-Mandatory Illustrative Guidance" (NMIG). However, the simplification proposal is depriving users of the sustainability report from crucial information to assess the due diligence of the company. For example, the policies to identify and manage actual or potential, positive or negative impacts on people or the environment, are crucial to assess due diligence. Therefore, it is paramount to perform an in-depth assessment to determine whether all disclosures currently presented in the NMIG should be made mandatory in the delegated act. While the NMIG may reduce implementation questions, encourage proportional innovation, and ease the burden on PAT narratives when rigid prescriptions fail, it could also reduce comparability. Without a minimum common ground, methodological heterogeneity hinders cross-sectional and time-series analyses. In this regard, the NMIG is useful if it complements—not replaces—a clear regulatory baseline that preserves consistency, traceability, and insurability.

Survey	CSEAR; Universidad de Burgos	Academia	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The "undue cost or effort" principle is aligned with the goal of administrative simplification. However, the articulation of this "relief" in paragraph 89 ESRS1 is so imprecise that it may turn this set of standards into dead letter. The "undue cost or effort" principle risks transforming Directive (EU) 2022/2464 into a voluntary guideline. The limitation of considering resilience in terms of risks places an emphasis on financial materiality, overlooking how an organization's activities may also affect the resilience of the ecosystems in which it operates.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The amendment is generally reasonable. But the "undue cost or effort" principle is too broad, as indicated in the response to question 19.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	CSEAR; Universidad de Burgos	Academia	Spain	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Thorough information on dependencies is increasingly important to motivate organizations and industries to tackle sustainability challenges. This amendment goes against the tide. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification appears to be proposed on the grounds of avoiding information that may impact corporate reputation, at the expense of resilience.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	IFRS and ESRS have different objectives and scope. Alignment with IFRS twists the notion of double materiality with the introduction of materiality as a filter and fair presentation, for example. As a result, ESRS is less aligned with the Green Deal. This greater alignment with the ISSB reduces the interoperability with other relevant sustainability reporting standards that companies have been applying for decades (such as the GRI).			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	CSEAR; Universidad de Burgos	Academia	Spain	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The simplification proposal is depriving users of the sustainability report from information. However, given the EU mandate the proposal has achieved a reasonable balance.

Survey	CSEAR; Universidad de Burgos	Academia	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	No substantial increase in administrative costs. Datapoints are relevant.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	Datapoints are relevant.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The notion of fair presentation is ambitious. It draws on financial reporting. Some ambition in this area is positive. However, it is inconsistent with the focus on limited assurance. Additionally, the application of fair presentation may dissuade companies from disclosing information on material topics, considering the inherent complexity and incompleteness of sustainability data.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Complex estimates are common to all sectors. The financial sector has a disproportionate effect on climate change. Absolute targets are essential for assessing progress on climate change, and banks are no exception in this regard. This exclusion is also at odds with other information on climate change required by financial institutions in other EU regulations (e.g. SFDR) and by banking supervising entities (Basel Pillar III).			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Thresholds are reasonable.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Processing information about wages, considering notions such as living wages, is a significant concern for society. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CSEAR; Universidad de Burgos	Academia	Spain	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The "consolidation" and reduction of DPs results in a loss of granularity and breaks the traceability necessary for the SFDR to inform investors. Merging eight DPs into a single "HR policy" in ESRS 2 limits the relevance of human rights, erases nuances by stakeholder group, and weakens operational alignment with UNGP/OECD. The single "severe cases" indicator fails to capture typologies, severity, remediation, or geography. Excluding "fatalities" from the scope of the PAI on lost days is a material setback. Investors require explicit visibility into fatalities, rates, and trends. Moving content to ESRS 2 (general) instead of maintaining it in ESRS S1–S4 reduces consistency between IROs and specific metrics and hinders insurability. The supposedly "marginal" reduction in coverage is, in fact, material for time series, benchmarking, and alignment with the SFDR Annex I tables; it increases the risk of cherry-picking and mapping gaps.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	AR 26 could be further reviewed to better reflect current developments (e.g., SBTN).			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Disclosing this information has enormous social benefits in terms of increasing gender equality. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information are minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	This formulation will contribute to damaging SMEs. The increase in government regulation and monitoring costs (in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from this unsophisticated simplification.			
Survey	CSEAR; Universidad de Burgos	Academia	Spain	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	CSEAR; Universidad de Burgos	Academia	Spain	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	CSEAR; Universidad de Burgos	Academia	Spain	33.E_5.	ESRS E5:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal? Survey	CSEAR; Universidad de Burgos	Academia	Spain	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Some emission-intensity datapoints have been trimmed. While intensity indicators are valuable to users, the cuts mainly target metrics that can be derived from other reported figures (e.g., emissions relative to revenue or total assets). We advocate preserving at least one sector-relevant intensity indicator, since stakeholders need both absolute and intensity perspectives—aligned with TCFD guidance on Metrics & Targets. On transition plans, we welcome the draft's explicit alignment with EU and international climate objectives.			
Survey	SEP Lab	Consultant (including software vendor)	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	SEP Lab	Consultant (including software vendor)	Netherlands	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	For all deleted datapoints: I miss the intelligence; keep all the original data points; focus on all the objectives of the Green Deal; create 'learning hubs' and/or an 'academy' for all stakeholders; to share knowlegde (example: knowlegde about biodiversity); learn from experiences, results during the coming years. And if the goals are met; then there is time and reason to reduce datapoints. That sounds smarter to me and more EU Commission intelligent!			
Survey	SEP Lab	Consultant (including software vendor)	Netherlands	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		As society we are not on track on climate and biodiversity; that's why the Green Deal is needed. Coming from a comfortable linear fossil system you could expect a lot of resistance of current stakeholders; it is hitting the comfortzone. Please keep the eyes on the ball/objectives of the Green Deal! The world is watching the EU but also works with other initiatives possible beyond the Green Deal: https://forico.com.au/natural-capital and the time of only financial numbers reporting is coming to an end: https://www.nyenrode.nl/en/news/n/social-value-top-25-dutch-companies--minus-30-percent we have all a social responsibility; there is only 1 world!			
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	-If the top-down approach is used : odoes it mean that the rating is not required at the IRO level and that the identification of IRO is enough ? odoes it mean that a topic/ sub-topic could be excluded without having identified the IROs ? How should it be materialized ? -On one side Combining S1 and S2 may be confusing as these topics are substantially different and the materiality may significantly differ from one topic to another (Reality may be hidden). On the contrary, 3 subtopics for Affected Communities is somehow hard to evaluate and could be aggregated. -The link between the topics/ subtopics and the data points to be reported should be done at the data point level to ease the process. -Could you add an example to illustrate significant variation of IROs between sites and the incidences on aggregation or disaggregation ?			
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	It is critical to evaluate the gross nature of an IRO. If an IRO is evaluated with a net approach, comparison between companies will be complex and the materiality assessment is likely to be subjective. We recommend assessing the gross nature on one side and the net nature separately.			
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The clarifications are appropriate.			
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The indication of which material topics are not covered by PAT is maintained but it remains key to explain why no PAT are in place in order to serve comparison purposes.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	The changes ease the understandability, clarity and accessibility of the standards.			
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	The reliefs are deemed to be appropriate.			
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We support the relief but we consider that it is essential to include a time limit to provide full scope of calculation. The time limit may depend on the size and means of the company.			
Survey	Des Enjeux et des Hommes	Consultant (including software vendor)	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Disclosing quantitative information for financial effects is challenging but is important for investors and this will become critical in the next coming years. Quantifying is necessary so that companies could anticipate the effects on their business model. It is key to impose requirements on this topic, with different level of granularity in order to allow incremental improvements. One option might be to impose qualitative data on the first year of reporting and to then impose quantitative data for huge companies and actions to be taken to get quantitative data for smaller companies.			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree

Survey	Ecoacsa	Consultant (including software vendor)	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome TNFD's proposal to consolidate the current nature-related standards (E2-E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. We call on EFRAG to make note of it and apply as possible.			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We welcome TNFD's proposal to consolidate the current nature-related standards (E2-E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. We call on EFRAG to make note of it and apply as possible.			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	We do not support the removal of the ESRS E4 biodiversity and ecosystems metrics metric specifications from the mandatory requirements. This is problematic because standardization is more limited at present than with other metrics. Specifying metrics (now in Non-Mandatory Illustrative Guidance (NMIG) 18-20) within the Standard would give companies the information they need to select and report practical, credible and comparable metrics and would support alignment with the TNFD disclosure metrics. If this does not occur, at the very least, it is important that (i) the NMIG stays attached to the Standard in some form and (i) a process is in place for ensuring updates are made on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly.			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree

Survey	Ecoacsa	Consultant (including software vendor)	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We support the simplified standards aligning with core elements of TNFD and encourage EFRAG to continue striving to maintain alignment with other international standards and frameworks, including ISSB and GRI. Improving the interoperability between the requirements in ESRS and the ISSB Standards, to enable companies to use the ISSB Standards as a starting point and 'top up' with specific impact disclosures to achieve compliance with the CSRD/ESRS, is important.			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	22.E4.	Comments on deleted datapoints in ESRS E4	I partially agree and partially disagree	We suggest to streamline and prioritize the number of quantitative nature-related data points. We call on EFRAG to make note of it and apply as possible.			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Biodiversity should always be considered material as a result of its importance, either by direct operations or supply chains			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets

Survey	Ecoacsa	Consultant (including software vendor)	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the ESRS being simplified in a way that maintains the double materiality approach of the Corporate Sustainability Reporting Directive (CSRD), covering environmental, social and governance topics. This principle of double materiality is vitally important for the reported information to be meaningful for users. It is also essential for the EU to respect its international engagement under the UN CBD Global Biodiversity Framework Target 15.			
Survey	Ecoacsa	Consultant (including software vendor)	Spain	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	Ecoacsa	Consultant (including software vendor)	Spain	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Ecoacsa	Consultant (including software vendor)	Spain	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	The option to report metrics only for locations relevant to existing sustainability targets should be removed or made additional. In order to align with the double materiality concept in ESRS 1 and throughout the standards, metrics should be reported for locations that are material for biodiversity and ecosystems.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	Clean Air Fund	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	CAF recognises the Commission's intention to simplify the DMA and appreciates that the amendments in Chapter 3 of ESRS 1 provide clearer guidance. The introduction of practical considerations, the clarification of the relationship between impacts, risks and opportunities, and the emphasis on ESRS as a fair presentation framework are useful steps. These measures can help reduce unnecessary administrative burden and avoid an overly compliance-driven checklist approach. However, the changes risk going too far by granting undertakings wide discretion in how they apply DMA. In particular, the new flexibility to decide whether to report at topical or IRO level, and the broad discretion around the treatment of non-material topics, create scope for inconsistent application. This may allow companies to narrow their assessment and conclude that critical issues such as pollution are not material. CAF does not believe that the balance between simplification and robustness has been achieved. The amendments simplify the process, but they also weaken enforceability. Explanations as to why a sustainability topic is or is not considered material remain largely voluntary. Without mandatory disclosure of the reasoning underpinning materiality assessments, transparency and comparability are undermined. Simplification should not mean deregulation. CAF supports proportionate simplification if it delivers higher-quality, decision-useful data on the most material issues. The current draft of Chapter 3 of ESRS 1, however, risks producing fewer datapoints without improving quality. CAF therefore recommends that EFRAG reinforce the DMA by requiring undertakings to provide a clear, standardised explanation of their materiality assessment outcomes.			
Survey	Clean Air Fund	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	CAF acknowledges that the new guidance in ESRS 1 brings some useful clarification on how remediation, mitigation and prevention measures should be considered in the DMA. Differentiating between actual and potential impacts and clarifying how to assess materiality before or after actions, provides preparers with more structure and consistency. This can help reduce divergent practices and promote a more uniform application of the DMA. At the same time, the framing raises significant issues. By allowing undertakings to consider the existence of mitigation or prevention measures, there is a risk that companies downplay the materiality of certain impacts, for instance, by arguing that pollution is less material simply because controls are in place. This could lead to underreporting on issues with clear and ongoing public health relevance. For CAF, the central priority is ensuring that when pollution is judged material, the data disclosed are of high quality, comparable, and decision useful. The new guidance must not become a loophole for omitting disclosures based on mitigation claims. Transparency requires companies to explain clearly both their assessment and the role of any remediation or prevention measures. CAF urges EFRAG to reinforce safeguards: companies should be required to document and disclose the reasoning behind their materiality decisions, including where mitigation is cited as a factor, to avoid selective or inconsistent reporting.			
Survey	Clean Air Fund	NGO	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E2	CAF recognises that the NMIG can be a helpful tool in clarifying methodologies or providing examples of how to approach narrative disclosures. It may reduce implementation questions and avoid overburdening companies with unnecessary complexity. However, CAF is worried about the role NMIG now plays in the revised ESRS. A significant proportion of previously binding content has been shifted into NMIG. This fundamentally weakens the reporting framework because NMIG is non-binding, hence companies can choose to ignore it without explanation. As a result, disclosures are likely to become inconsistent, selective, and less comparable across companies and sectors. CAF does not support the removal of key datapoints from the binding standards. NMIG should be limited to clarifying "how to report," not redefining "what to report." In its current form, NMIG risks becoming a vehicle for deregulation. CAF supports simplification, but not at the cost of losing core disclosures that are essential to understanding companies' pollution impacts.			
Survey	Clean Air Fund	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	CAF recognises proportionate steps to simplify and streamline the reporting process and recognises that some of the newly introduced reliefs can help companies avoid unnecessary complexity and improve interoperability with ISSB standards. That said, CAF has serious reservations about the breadth of some reliefs, particularly those related to "undue cost or effort" and data quality exemptions. While these may ease implementation challenges, they risk becoming loopholes that companies use to avoid disclosing pollution-related data. The removal of the systematic preference for direct data in favour of estimates also risks lowering data quality. CAF believes it is possible to provide burden relief to companies whilst ensuring that the quality of data remains robust. Simplification must lead to better quality data, not weaker disclosure obligations. If reliefs are too generous, the system risks sliding into deregulation, producing fewer datapoints of lower quality and comparability. This is particularly problematic in relation to ESRS E2, where public health relevance requires robust, consistent information. CAF also stresses that reporting should not remain at the level of policy descriptions alone, but demonstrate how companies are prioritising effective mitigation measures in practice.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Clean Air Fund	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Clean Air Fund	NGO	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	CAF acknowledges that streamlining the standards and focusing on quantitative information can be positive if it allows companies to dedicate resources to producing better quality and more relevant disclosures. A leaner set of datapoints can also reduce duplication and administrative burden. However, the scale of reduction in the current draft raises significant concerns. Cutting more than half of mandatory datapoints risks undermining transparency on core environmental issues, particularly pollution. Many of the datapoints removed affect the core integrity of the standards. By shifting substantial content into non-mandatory guidance, the draft risks reducing the ability to ensure consistent, comparable and reliable disclosures across companies and sectors. This risks turning simplification into deregulation: companies may report less, with wide variations in scope and quality, making it harder to assess their real environmental and health impacts. CAF strongly believes that simplification should not become deregulation. The risk of the current draft is that it produces fewer datapoints of lower quality, not fewer datapoints of higher quality. The ESRS must ensure that where pollution is material, the information reported is consistent, comparable, and decision-useful. This requires disclosures to link to concrete action: simply listing policies or resources is insufficient unless companies show how these translate into real mitigation outcomes.			
Survey	Clean Air Fund	NGO	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	CAF is aware of the objective of the amendments to ESRS 1 concerning the clarification of the DMA and simplification of the process for preparers. The introduction of practical considerations, the option to adopt either a bottom-up or top-down approach, and the streamlining of the list of topics all reduce implementation complexity. However, CAF is concerned that the new discretion afforded to undertakings risks undermining comparability. The possibility to report at either topical or IRO level, combined with the lack of a mandatory requirement to explain why topics are judged non-material, creates space for selective reporting. This undermines the consistency that stakeholders need. Securing high-quality and comparable data is more important than broadening the scope of reporting at all costs. Materiality is central, but it must not become a loophole. CAF believes simplification is welcome if it strengthens the quality of disclosures. But the deletion of specific explanatory requirements shows how easily simplification can drift into deregulation. To maintain confidence in the system, undertakings must be obliged to provide clear, standardised reasoning for their materiality assessments, particularly when excluding environmental and health-related topics. CAF therefore partially agrees with the amendments. While the changes make ESRS 1 more usable, they fail to preserve the safeguards that guarantee comparability and accountability.			
Survey	Clean Air Fund	NGO	United Kingdom	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	CAF recognises the value of consolidating disclosures into cross-cutting requirements for policies, actions, targets, and metrics. This structure improves consistency and reduces duplication, making the standards more accessible for preparers. Yet, this streamlining comes at a cost. By moving topic-specific obligations into ESRS 2, the standard risks losing the necessary detail to evaluate company action on issues like pollution. Generic disclosures provide less assurance that undertakings are prioritising meaningful mitigation over high-level commitments. For CAF, disclosure must show how reported actions translate into effective prevention, reduction and mitigation, not just list policies. Simplification that blurs this distinction weakens accountability and makes reports less comparable. CAF therefore partially agrees with the changes to ESRS 2, the restructuring enhances readability, but shifting too much into non-binding guidance and generic requirements reduces transparency and lowers ambition in areas where clear reporting is expected.			
Survey	Clean Air Fund	NGO	United Kingdom	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	CAF cannot support the amended ESRS E2. While simplification is an important goal, the draft has gone too far, hollowing out the standard and undermining its quality. Among the 61% of datapoints that have been deleted, there are critical requirements relating to pollutant targets and methodologies. Key content has been shifted into NMIG, which companies may ignore without justification. This poses risks and reduces transparency. CAF is particularly concerned about the deletion of the requirement for undertakings to explain how their actions and resources relate to the mitigation hierarchy. Without this obligation, companies can describe policies in generic terms without clarifying whether they prioritise preventing or reducing pollution, as opposed to remediation or compensation. For CAF, this change fundamentally weakens accountability: reporting becomes descriptive, not action-oriented. The removal of methodological disclosure requirements, explaining whether emissions are measured or estimated, further erodes the reliability of reported data. The absence of binding site-level disclosures makes it impossible to assess localised pollution hotspots, where communities face the greatest health risks. Together, these changes turn simplification into deregulation. CAF strongly believes that the ESRS must ensure that, where pollution is material, disclosures are robust, consistent, and decision-useful. The draft fails this test. Reporting should demonstrate not just policies on paper, but whether companies are taking meaningful steps to reduce pollution in practice. CAF therefore disagrees with the amended ESRS E2.

Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We partially disagree that the revised Double Materiality Assessment (DMA) reduces complexity. - In fact, the removal of previously clear guidance—especially regarding scoring methodologies and thresholds—adds ambiguity. Without a defined scoring system or clear thresholds, companies may struggle to conduct a robust DMA, and external auditors may find it difficult to challenge or validate materiality assessments. This lack of structure risks undermining both consistency and credibility. - The revised DMA suggests that only topics identified as material through the assessment should be disclosed. DMA disclosures remain focused, consistent, and aligned with the company's validated materiality outcomes. - While this approach is logical and aligns with the principle of DMA, it raises concerns about the inclusion of other topics—such as those highlighted by rating agencies or external stakeholders. If companies are expected to report on issues beyond those identified through their own DMA, it questions the purpose and value of conducting a DMA at all. •Thus to overcome this ambiguity, our proposal would be to make the reporting of non-material topics voluntary and at the discretion of companies.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The new guidelines clarifying how to consider remediation, mitigation, and prevention actions within the DMA introduce additional complexity for companies. Undertakings are now expected to assess and disclose both the gross and net impacts of their activities. This significantly increases the reporting workload. Companies must first describe the initial gross negative impacts, then detail the actions taken to remediate, mitigate, or prevent those impacts. They are also required to justify why the resulting net impact is considered non-material. Furthermore, they must provide supporting evidence—such as audits, KPIs, or internal reports—to substantiate this assessment. This raises a fundamental question: can this be considered a simplification? These requirements add substantial work and cost for reporting entities.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I disagree	We acknowledge and support the intention behind the proposed amendments to improve the readability, conciseness, and connectivity of ESRS sustainability statements. The introduction of an executive summary and the use of appendices to separate detailed disclosures from key messages are positive steps that enhance accessibility and coherence, particularly for stakeholders unfamiliar with technical reporting. Clarifying the concept of "connected information" and discouraging fragmentation and repetition also contributes to a more integrated approach to sustainability and financial reporting. This alignment with broader corporate reporting is essential to ensure that sustainability disclosures are not treated in isolation. However, while these changes offer greater flexibility in presentation, they do not necessarily reduce the complexity of the underlying reporting requirements. The volume and granularity of data required remain substantial, and in many cases, the simplifications are more cosmetic than substantive. For example, merging datapoints or rephrasing indicators may improve readability but does not significantly reduce the reporting burden for preparers. Therefore, while we agree that the amendments support more relevant and concise reporting in form, we believe that further efforts are needed to simplify the content itself. This would ensure that the ESRS framework remains both robust and proportionate, particularly for first-time reporters and/or smaller companies that are willing to report on voluntary basis.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We acknowledge the efforts made to restructure the ESRS architecture, particularly the interaction between ESRS 2 and the topical standards. The shift toward a more principles-based approach and the reduction of prescriptive datapoints in the Policies, Actions, and Targets (PAT) section represent a step forward in simplifying the framework and improving its usability. However, while these changes improve the presentation and connectivity of the standards, the actual reporting effort may not be significantly reduced. For example, the requirement to disclose PAT for material IROs remains, and companies must still explain which material topics are not covered by PAT. The elimination of the obligation to disclose future plans and timelines is helpful, but the overall complexity of assessing and reporting on material IROs persists. Moreover, the ability to disclose information at a higher aggregation level is welcome, as it better reflects how companies manage sustainability topics internally. Yet, further guidance may be needed to ensure consistency and comparability across sectors. In conclusion, the amendments strike a better balance between prescriptiveness and flexibility, and they enhance connectivity with broader corporate reporting. However, the simplification is more cosmetic than substantive, and additional efforts may be required to reduce the actual reporting burden.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The reorganization of content—clearly distinguishing mandatory requirements from non-mandatory guidance—is cosmetic. The removal of "may disclose" datapoints eliminates ambiguity and strengthens the consistency of interpretation across reporting entities. The relocation of all "shall disclose" datapoints into the main body of the standards, along with the placement of mandatory Application Requirements directly beneath the relevant Disclosure Requirements (DRs), improves the logical flow and usability of the standards. This structure helps preparers better understand what is required and how to report it, reducing confusion and supporting more consistent implementation. The revised language is also more concise and coherent, which contributes to improved accessibility, particularly for first-time reporters and cross-functional teams involved in contributing to the sustainability reporting.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The NMIG in the revised ESRS aims to support implementation through examples and explanations. However, its optional nature introduces several disadvantages that may affect consistency and clarity in sustainability reporting. It is confusing. Firstly, NMIG's non-binding nature means companies may choose to ignore it, leading to inconsistent application of ESRS across entities. This undermines comparability and may complicate assurance processes. Secondly, the separation of illustrative guidance from the mandatory standards can cause confusion. Companies may struggle to distinguish between what is required and what is merely recommended, increasing the risk of misinterpretation. Thirdly, the legal status of NMIG remains uncertain, creating ambiguity for regulators and auditors. Another concern is the risk of over-reliance. Companies might adopt NMIG examples without adapting them to their specific materiality assessments or sector context, resulting in disclosures that are not decision-useful or misaligned with actual impacts. Finally, while NMIG is optional, interpreting and applying its content may require significant expertise and resources, posing a burden for smaller entities. These organizations may lack the capacity to fully benefit from the guidance, potentially widening the gap in reporting quality between large and small companies. In summary, while NMIG offers valuable support, its optional status, legal ambiguity, and potential for misapplication present notable challenges for consistent and effective ESRS implementation. To avoid the lengthy discussion observed during the first auditing process our proposal would be to name the document: 'Non-Mandatory Illustrative Document/Guidance'. One the hand this will clarify its legal status and can be updated regularly by EFRAG in view of new information.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The proposed amendments offer a pragmatic and proportionate approach to reduce reporting burdens while maintaining the transparency required to support the EU Green Deal and interoperability with IFRS S1 and S2. Advantages include: The introduction of horizontal reliefs such as "undue cost or effort" and flexibility in data sourcing (direct vs. estimated) enhances feasibility for preparers. Provisions allowing partial scope reporting and the exclusion of non-significant activities or joint operations improve relevance and reduce unnecessary complexity. Streamlining disclosures on resilience and financial effects ensures clarity and avoids speculative reporting. The relief for acquisitions and disposals facilitates smoother transitions in reporting scope. However, some limitations remain: The absence of relief for commercially sensitive information may hinder full transparency in certain contexts, pending regulatory developments. The increased use of estimates and partial reporting could affect comparability and data reliability across undertakings. Certain reliefs go beyond those in IFRS S1 and S2, which may challenge full interoperability. Overall, the amendments reflect a constructive response to stakeholder feedback and early implementation challenges. They support a more efficient and targeted reporting process, without compromising the core objectives of the ESRS framework. Further alignment with SFDR and ISSB standards will be essential to ensure consistency and facilitate convergence across sustainability reporting regimes.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The role of the external auditors is underestimated. The provision allowing for partial scope reporting when reliable data is unavailable is pragmatic and reflects the operational realities many undertakings face, particularly in complex value chains. By requiring disclosure of actions to improve data coverage in future periods, the standard ensures transparency and encourages continuous improvement without penalizing companies for initial limitations. The absence of a time limit for using this relief is understandable, given the variability in data availability across sectors and geographies. However, I acknowledge the concerns raised by some EFRAG SRB members regarding the potential for prolonged reliance on partial disclosures. A soft expectation or guidance encouraging progressive expansion of scope over time could help mitigate this risk. Importantly, this relief does not exempt undertakings from disclosure obligations—it simply allows for a more realistic and phased approach to metric calculation. This aligns with the principles of proportionality and feasibility, while still supporting the overarching goals of the ESRS framework and its interoperability with IFRS S1 and S2. In conclusion, the relief is well-calibrated to support prepares during the early phases of the implementation, but that must be accompanied by more guidance for them and external auditors.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We support Option 2, which limits the requirement to qualitative information and allows companies to disclose quantitative financial effects on a voluntary basis. This approach ensures that the appropriate contextual information is provided to the users of the sustainability statements. It also acknowledges the commercial sensitivity of certain quantitative disclosures, which may pose strategic risks if made mandatory. By removing conditional requirements, Option 2 reduces complexity and avoids placing undue pressure on companies to produce uncertain or speculative figures. It enables entities to focus on building robust qualitative narratives that reflect their strategic positioning and sustainability commitments, while gradually developing the capacity to report quantitative data as the methodologies mature over multiple reporting periods. Suggestion for improvement: From EFRAG State of Play 2025 is obvious that at high level Sustainability statements are comparable. So EFRAG can encourage voluntary progress by mapping ongoing initiatives at sector level.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	There is a controversial point of view between the question 20 and the question 19? As we support the Option 2 - that suggests that quantitative disclosures should be voluntary, while answering "Yes" to the ESRS E1 question implies that some quantitative datapoints are still necessary and feasible.

Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	The message of our members (EU and non-EU companies) is to ensure a high-level of interoperability between various reporting systems to avoid double / fragmented reporting for companies. However, not enough expertise and knowledge on the IFRS S1 & S2 to comment this question.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	Some datapoints—such as the breakdown of employees by age—may be of limited relevance and their removal contributes to simplification, other deletions raise concerns. For example, the removal of the "total GHG emissions" datapoint does not represent a meaningful reduction in reporting effort. Companies are still required to calculate and disclose Scope 1, Scope 2, and Scope 3 emissions. Since total GHG emissions are simply the sum of these scopes, removing this datapoint adds no real value and may even reduce clarity for users of the information. This kind of change is more cosmetic than substantive. The users were seeking simplification specifically for datapoints that are difficult to obtain or not readily available, and which require the implementation of an entire process. Removing datapoints that are already easily reported does not constitute a simplification. On the contrary, it overlooks the real challenge, which lies in addressing the complex and resource-intensive datapoints.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	22.E3.	Comments on deleted datapoints in ESRS E3	I disagree	The intention of simplification is positive, but converting some optional datapoints to mandatory may work against the burden-reduction goal. In addition the companies operate under national or regional law for water (E3) and biodiversity (E4), how can they report at global level for these datapoints? Then they need to do a national reporting and then a corporate one at global level. •At present, the water management is structured in line with national law requirements. Companies already perform ordinary calculations of withdrawals and discharges, and in some sites, they implement measures such as rainwater capture and reuse. •However, when mapping against the ESRS datapoints, multiple companies face a gap in granularity: some metrics required by ESRS (e.g. disaggregation by source, quality, or level of reuse) are not systematically collected or can not be reported as such. •Companies are working to align their monitoring system with ESRS categories, but this requires time, investment, and technical guidance. A phased approach and flexibility would be crucial for SME's to ensure accurate and meaningful reporting, without compromising the quality of data.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	22.E4.	Comments on deleted datapoints in ESRS E4	I disagree	For the E4 - Biodiversity is typically managed at a local level, whether by country or individual sites, due to the specific ecological, regulatory, and geographic contexts involved. This raises a valid question: does it make sense to require a corporate-level biodiversity transition plan for a matter that is inherently location-specific? •Company approach is limited to compliance with national/regional law on protected areas and permitting. We have not yet developed systematic methodologies or KPIs for biodiversity beyond legal requirements. •Practical guidance and gradual implementation timeline would be essential to allow operators especially SME's to build capacity, develop transition plans, and progressively integrate biodiversity into the overall sustainability strategy.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	22.G1	Comments on deleted datapoints in ESRS G1	I disagree	For G1 Business Conduct confirmed incidents - This may lead to issues concerning the protection and disclosure of sensitive data (confidentiality).			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	See feedback provided under point 22.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	It is surprising to see new datapoints being introduced while the majority of CSRD reports (waves 2 and 3) have not yet been published. Shouldn't we allow companies to release their first CSRD reports—already containing a significant number of datapoints—before adding new ones? It feels premature to go this far in the reasoning or development at this stage			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	Explicitly requiring the adoption of fair presentation in the preparation of ESRS sustainability statements would strengthen the application of the materiality filter and enhance the relevance of reported information. Fair presentation ensures that disclosures are complete, balanced, and free from bias. By embedding this principle, undertakings are guided to report only on sustainability matters that are genuinely material, based on their impacts, risks, and opportunities. This approach discourages excessive or superficial reporting and supports a more disciplined and transparent materiality assessment. Moreover, fair presentation contributes to the clarity and usability of sustainability information. It helps stakeholders—particularly investors and regulators—navigate disclosures more effectively, focusing on what is decision-useful rather than being overwhelmed by immaterial data. In this context, fair presentation acts as a safeguard against both under-reporting and over-reporting, thereby improving the overall quality and comparability of sustainability statements across entities.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Complex estimations are inherent across sectors, and excluding financial entities would compromise consistency and comparability. The key question is whether it is truly up to companies, as reporting entities, to assess the relevance of this exception for financial institutions.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	That is "the" good example of simplification. Shifting from a proportional threshold (at least 50 employees representing 10% of total workforce) to a fixed approach based on the top 10 countries by headcount—provided each has more than 50 employees—enhances the relevance and comparability of social data. This revision addresses a key limitation of the previous requirement, which often resulted in limited or fragmented country-level disclosures. By focusing on the countries with the largest employee presence, the new threshold ensures that reporting reflects the most significant social contexts within the undertaking's operations. While a minority of stakeholders have noted that this change may increase the number of countries to report on, the data required is typically available through HR systems, and the additional reporting effort is expected to be manageable. The benefits in terms of transparency and meaningful insights into collective bargaining and social dialogue outweigh the marginal increase in reporting burden. Overall, this adjustment contributes to more consistent and decision-useful sustainability reporting, aligned with the ESRS objective of improving data quality without imposing disproportionate requirements.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	As biodiversity and ecosystem-related methodologies continue to evolve rapidly, it is essential that the application requirements reflect the latest scientific thinking and align with emerging frameworks such as the Science-Based Targets Network (SBTN). While AR 26 provides useful guidance on the types of targets companies may set—such as area restored, natural surface recreation, or ecological integrity of sites—it could benefit from further refinement. Specifically, the current wording may not fully capture the dynamic nature of biodiversity metrics, nor the increasing emphasis on outcome-based and science-aligned approaches. A revised AR 26 should offer clearer direction on how to define meaningful and measurable biodiversity targets, including references to ecosystem services, species recovery, and landscape-level impact. It should also encourage alignment with recognized methodologies and taxonomies to support consistency and comparability across disclosures. Updating AR 26 would not only improve the quality of reporting but also support companies in setting credible and actionable biodiversity goals, in line with global expectations and regulatory developments.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Not sure that the issue already mentioned in the previous survey has been solved (no alignment with the Pay Transparency Directive)			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	see item 22			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. I disagree	Proposal to delete: 1. CRM: Concept is regional and for different reporting regions will be different. 2. Dematerialisation; 3. Remanufacturing; 4. Repair: 5. Reparability: 6. Resource efficiency: 7. Scope of reparability: Remove 2-7 as the Concept of circular economy is clear. 8. Secondary resources: Definition of Raw material is sufficient. 9. SRM: Concept is regional and for different reporting regions will be different. 10. GFA: Irrelevant. Developed nationally/regionally due to rule of law in place. 11. Substance of Concern: 1. Bullet point 1, covered by SVHC definition. 2. The companies outside of EU do not have to comply with CLP criteria. 12 Waste stream: Definition of Raw material is sufficient. 13: GHG removal: Modify '(Anthropogenic) removals refer to the withdrawal of GHGs from the atmosphere as a result of deliberate human activities. These include enhancing biological anthropogenic sinks of CO2 and using chemical engineering to achieve long-term removal and storage. Applications of carbon capture and storage (CCS) from industrial and energy-related sources reduce emissions but do not remove carbon from the atmosphere. Removals are achieved when CCS is combined with bioenergy production, also known as bioenergy with carbon capture and storage (BECCS). Removals are also achieved through direct air carbon capture and storage (DACCS), in which CO_2 is extracted directly from the air and stored. Other removal pathways include enhanced weathering and mineralisation(e.g. such as recarbonation of lime-based products. In this process, CO_2 from the atmosphere is absorbed and permanently bound in the material during its lifetime and end-of-life phase. Removals can be subject to reversals, which are any movement of stored GHG out of the intended storage that re-enters the atmosphere. For example, if a forest that was grown to remove a specific amount of CO2 is subject to a wildfire, the emissions captured in the trees are reversed.			
Survey	IMA-Europe	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The simplifications appear more cosmetic than substantive. While the reduction in datapoints is welcome in principle, a closer look reveals that many have been merged or slightly amended, rather than removed entirely. As a result, the overall effort required to collect, calculate, and validate sustainability data remains largely unchanged for many companies. That said, the decision to retain certain provisions due to ongoing regulatory developments at Level 1—such as the definition of value chain for financial institutions or the interpretation of 1.5°C compatibility—is understandable and reflects a pragmatic approach and does not allow enough time for companies to get ready for compliance due to legal uncertainty.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	ESBG welcomes the proposed amendments to Chapter 3 of ESRS 1, which simplify and clarify the DMA and reinforce materiality as a filter. The additional guidance is helpful and should support more consistent reporting. However, undertakings still face difficulties in evaluating impacts on a comparable scale when impacts are not measured using consistent units, and in assessing effects on third parties in a way that is consistent with other undertakings. The absence of generally accepted methodologies further hinders coherence and comparability in sustainability reporting. ESBG therefore sees a need for further clarification. The identification of risks and opportunities (paragraph 42, AR 15) would benefit from clearer guidance on assessing likelihood and magnitude and on the connection with SBM-3 in ESRS 2. The current wording allowing disclosures either at topical level or at IRO level may be confusing. Our understanding is that reporting should be conducted at topic level regardless of approach, which we see as beneficial for streamlined reporting. It is important that material topics are identified at the same level in the DMA. In addition, paragraph 21(b) of ESRS 1 states that information is material when "it is necessary for users to understand the undertaking's IROs." While broad, this may impose an undue burden on preparers. We recommend explicitly incorporating the principle of decision-usefulness, in line with financial reporting, to enhance clarity and certainty. The revisions introduced in the streamlined Appendix A appear largely cosmetic, moving sub-sub-topics into main columns without substantive change. Finally, EFRAG could include, within its Non-Mandatory Implementation Guidance, a sector-specific reference list of IROs to support preparers in applying the sector-agnostic ESRS and enhance consistency and comparability across disclosures.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We consider that it is slightly clearer. However, a diagram on the separate treatment of actual vs. potential negative impacts would facilitate understanding, especially in relation to remediation actions being taken or planned. Moreover, it increases the complexity of reporting. We welcome the clarification on IROs, and particularly the interpretation of actual and potential positive and negative impacts. However, we see need for further guidance and clarification. It is important to ensure that companies provide accurate and reliable information, and that it is clear what is to count as a negative impact, for instance when it is mitigated. For the process of the DMA, it would be beneficial if it is clarified how an IRO and topic is affected if the relevant challenge is regulated in a country. Appendix C, while useful, does not provide full clarity and guidance on the identification and selection of potential impact. It could be beneficial with a concrete example in the appendix. Moreover, the visualization of Appendix C could be clearer – if it is meant to be read as a flow-chart where one leads to the other. Distinction between gross and net impacts: While the introduction of this distinction is conceptually relevant, it may add practical complexity—especially when assessing indirect impacts such as financed emissions. We recommend that EFRAG provide specific guidance for financial institutions on how to apply this distinction in the context of mitigation policies, exclusions, or engagement strategies. Clarify "significant ongoing actions": The term lacks definition and may result in inconsistent application across undertakings. Ensure alignment with auditability and comparability: The current approach risks undermining both due to subjective judgments on remaining impact.

Survey	ESBG WSBI	Association of financial institutions	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The removal of repetition and fragmentation of data is a clear indication of a more structured report. This was one of the largest issues faced by first-time reporters last year. Leaving the executive summary as an option is important, so as not to enforce additional burden. We support the increased flexibility and revised structure of ESRS reporting. We particularly appreciate the option to include taxonomy reporting in appendices and that reporting entities are only required to disclose policies once. The option to incorporate information by reference adds flexibility, especially for corporate groups. However, for financial institutions, this presents technical challenges—particularly when ESG disclosures are already provided under Pillar 3 frameworks. Differences in consolidation scope, assurance levels, and timing can lead to inconsistencies. We recommend that EFRAG clarify the criteria for referencing external documents, set minimum standards for quality and timing, and provide NMIG examples tailored to banking groups with multiple reporting scopes.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Changes in PAT were welcoming, especially the removal of plans and timelines for PAT implementation. We also welcome the simplification of the MDRs (now GDRs), which provides more flexibility. At the same time, it is important to maintain PATs for material IROs (if adopted) as a reporting point in ESRS 2. Within GDR-A (new paragraph 38), more information should be given on the materiality threshold of what is considered as "significant resources," as this is still subjective and could be an issue during audit. The materiality/threshold could be defined by the undertaking, disclosed in the general disclosures, in order to support consistency and auditability. We also recognise that GDR-A introduces helpful flexibility by allowing voluntary disclosure of sustainability-related CapEx and OpEx. However, its applicability to financial institutions is limited. In this sector, sustainability-related resources are typically channelled through financial products—such as loans, investments, or insurance—rather than through own operations. As a result, these figures may not be operationally relevant or material.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Welcoming changes. Overall, we believe the proposed amendments achieve the desired level of clarity and accessibility, and the overall structure of the standards contributes to this. Remaining ambiguity in "may" language: Although most "may disclose" datapoints were removed, some still remain (e.g., ESRS 1 p.114–115), which could cause confusion and should be reconsidered. Terminology consistency: Terms like "material topics" vs. "material IROs" and "adverse" vs. "negative" impacts are used interchangeably, which may lead to interpretation issues and audit challenges. Application Requirements (ARs): Wording such as "shall consider" in ARs creates ambiguity. It's unclear how "consideration" can be measured or audited, potentially leading to burdensome discussions with auditors. Need for datapoint mapping: A correlation table between old and new datapoints would help preparers transition and reduce implementation costs.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We are positive to the establishment of the NMIG and to the fact that it is not implemented in the Delegated Act, as it could create confusion for reporting entities and users of sustainability information. The shift of the information to NMIG is important, as it was creating too much complexity in the standards. We suggest to keep NMIG as voluntary and link the information directly with ESRS paragraphs and chapters, in order to facilitate reporting for undertakings that are reporting such information on a voluntary basis. NMIG should remain concise and practical: It should offer clear examples, not act as a repository of prescriptive content or implicit "best practices." Risk of confusion: If NMIG is too detailed or ambiguous, it may confuse preparers, auditors, and stakeholders about its legal status and expectations.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	PARTIALLY AGREE Overall, we are positive to the reliefs provided. There is a need for streamlined reporting that ensures that material information is easily available. We acknowledge the data challenge that exists for both reporting entities and users of sustainability information. Direct data is preferred, but it is important to allow for estimations where it is not possible. It is important to have transparency regarding the quality of the data and sources provided. We believe the intention is covered through paragraph 90, but the language could be simplified. Clarify upstream/downstream data expectations: The current drafting may imply systematic data collection across all metrics, which is impractical. It should be clarified that such data is only required for materiality assessment. The flexibility to use estimates and proxies is a practical necessity, especially in sectors with complex value chains. However, the lack of a reliability hierarchy or minimum criteria may affect data quality and comparability. In the financial sector, where data traceability is critical for risk management, indiscriminate use of proxies can lead to inconsistencies and undermine supervisory confidence. We recommend establishing a hierarchy of sources (e.g., primary data > validated proxies > sector averages), requiring explicit disclosure of estimation methodologies, and including an uncertainty assessment for each proxy used.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	ESBG agrees with the introduction of a relief for "undue cost or effort." However, we suggest that no time limit is implemented, due to the uncertainty of the VSME take-up by SMEs, which will limit the availability of actual data. At the same time, we are concerned about the potential for inconsistent understanding and application of this concept. There is a necessity for clearer guidance on how to interpret and integrate this concept into sustainability reporting. This term should be further specified and developed to prevent the need for unnecessary justification to the auditor regarding the undertaking's partial non-disclosure of certain requirements under the "undue cost or effort" exemption. Clarify terminology: The term "undue cost or effort" is used in both DMA (p47) and reporting (p89), which may cause confusion. Clear distinction is needed. Allow full estimation: Paragraph 91 should clarify that metrics may be fully estimated—not just partially—when reliable data is unavailable.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ESBG WSBI	Association of financial institutions	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	As preparer, quantifying anticipated financial effects represents a significant challenge, as it requires estimating figures over time horizon that substantially exceeds the scope of an undertaking's strategic plan and in the absence of generally accepted methodologies.The uncertainty inherent in such projections is therefore very high,and disclosing such figures entails providing data approved byBoard of Directors that is subject to a high degree of uncertainty and unreliability. For this,we support a common-ground approach.In the short term we support Option2, where quantitative data can remain voluntary, and more guidance should be provided on methodology.At the same time,we recognise the intention behind Option1 to obtain more detailed quantitative data,which would benefit financial industry as an important user of sustainability information.Credit institutions are under increasing pressure from regulatory and supervisory bodies (EBA,ECB&NCA) to collect data on anticipated financial effects from their counterparties.Quantitative anticipated financial effects are explicitly referenced inEBAGuidelines on the Management of ESG Risks as a critical metric.However, counterparties are unlikely to produce reliable data unless these metrics are included in their sustainability disclosures and subject to assurance. Without this metric in ESRS E1, credit institutions will have to collect it bilaterally through questionnaires, as supervisors will still require it for risk management purposes. Implementing Option 1 is challenging at this time due to the lack of data and could involve legal and audit risks. High uncertainty and the absence of standardised methodologies make quantitative disclosures unreliable and potentially misleading, and forward-looking data may give a false sense of certainty and increase litigation risk. Ideally, we prefer a flexible short-term solution while still aiming to achieve quantitative data in the future. A mixed approach could use disclosure heatmaps to provide a comprehensive overview without resorting to numerical data. We also ask EFRAG to explain the potential legislative risks that Option 1 may pose.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	ESBG acknowledges the importance of the datapoints retained in paragraphs 40–42 of ESRS E1 for assessing exposure to transition and physical risks. However, there are still concerns regarding their alignment with existing reporting obligations. It would be useful to clarify which datapoints correspond to those already covered under the Pillar 3 templates in order to reduce duplication and reporting burden. For example, ESRS E1 paragraph 40(a) overlaps with Pillar 3 template 5. Clearer guidance on such overlaps would ensure consistency and help streamline the reporting process. Furthermore, it would be appreciated if clarification could be provided on whether the anticipated financial effects on revenue (ESRS 1 paragraph 41 (e)) should be reported on a gross basis or net of mitigation actions, as the current wording does not appear to address this point.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	PARTIALLY AGREE We support the financial consolidation approach; however, we would urge EFRAG to provide more guidance on when to include Scope 1 and Scope 2 emissions from operated assets that are outside the reporting boundary. This would streamline reporting and contribute to real simplification. Moreover, it would be helpful to have an illustrative example that clarifies how emissions are reported for real estate investments for different ownership structures (direct investments, through ownership of a subsidiary real estate company, through funds, etc.).			
Survey	ESBG WSBI	Association of financial institutions	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	ESBG WSBI	Association of financial institutions	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	FOR ALL: We are positive to the reduction of "shall disclose" requirements, specifically the narrative PAT disclosures. We do not believe this burden reduction is in conflict with fulfilling the objectives of the EU Green Deal. Not all reductions will lead to less reporting effort: While the number of datapoints has decreased, (a)the simplifications may have taken place to topics that are not material to the undertakings (b)new concepts and methodologies may increase complexity. Ambiguity in remaining provisions: Some paragraphs (e.g., ESRS 1 p27, AR 20 to p49) still use vague language like "useful information" or "possible aspect to cover," which may create uncertainty.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We oppose the introduction of new mandatory datapoints, as converting "may" to "shall" contradicts the simplification mandate set by the European Commission. In particular, requiring disclosure of biodiversity transition plans may create uneven pressure across sectors, encouraging premature publication before robust methodologies are available.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	PARTIALLY AGREE We acknowledge that the information is justified. However, for ESRS 2 - BP 1, there should still be a balance on the financial burden for undertakings.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ESBG WSBI	Association of financial institutions	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	PARTIALLY AGREE ESBG notes that "fair presentation" can be subjective. More guidance should be given to ensure that audit costs are contained. We also believe it is important to provide robust guidance on how fair presentation should be interpreted within the sustainability sphere, if maintained as a founding principle for the ESRS.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The obligation to disclose absoluteGHGemission reduction targets represents a red line.We are strongly against requiring banks to publish climate absoluteGHGemission targets and support intensity-based targets instead.Some provisions ofESRSare unsuitable for the banking sector. ESRSE1-4 requires institutions to report GHG reduction targets in absolute values. Currently,banks have developed targets through Net2ZeroBankingAlliance,focusing on intensity metrics for most sectors&absolute values only for fossil fuel-related sectors.Projection difficulties: Setting absolute GHGreduction targets requires complex projections of financing volumes and emissions intensities over 5–25years.This is challenging due to uncertainties in macroeconomic and climate conditions, client decarbonisation trajectories and the composition of future portfolios. Many companies have not yet measured their GHG emissions or set decarbonisation paths. Consequently, absolute targets risk contradicting banks' role in financing the low-carbon transition. They would push banks to reduce exposures to high-emitting counterparties instead of supporting their transition. Banks can only set absolute targets for sectors from which they plan to divest, while their mission involves increasing financing to transition sectors. Data reliability issues: The availability and quality of data for a reliable baseline are insufficient. Reported emissions are volatile due to methodological changes, SMEs often lack data and reliance on proxies (e.g. PCAF) does not meet CSRD quality standards. Unreliable data undermines comparability, provides limited value to stakeholders and exposes preparers to high legal risk considering Board approval requirements. Sector-specific considerations: Financial institutions face inherent limitations in forecasting long-term portfolio composition, as asset and liability structures are influenced by interest rates, macroeconomic developments and external shocks. Given these challenges, absolute values require estimation that could undermine reporting credibility. Intensity targets are today the only workable tool compatible with banks' role as financiers of the economy and aligned with SBTi. Financial institutions should be explicitly exempted from mandatory disclosure of absolute targets and retain flexibility to disclose intensity, absolute, or both.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	PARTIALLY AGREE ESBG acknowledges that different methodologies for country-by-country disclosures related to S1 may impact companies in varying ways. The financial sector is dependent on comparable information on social sustainability parameters, and we welcome the solution that would provide more information by country.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	PARTIALLY DISAGREE ESBG considers robust information on living wages as important when assessing social sustainability. We acknowledge that there exist different interpretations and see a need for streamlining. The proposed hierarchy may result in less transparent reporting, combined with a lack of requirement to report on which methodology is used. We also note that in some jurisdictions, companies are already obliged to consider living wages in their due diligence processes according to national legislation.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	ESBG welcomes the way the SFDR Principal Adverse Indicators (PAIs) have been incorporated into the amended ESRS. The consolidation of datapoints and amendments aimed at increasing relevance are considered positive developments that improve usability for both preparers and users of sustainability information. It is seen as particularly helpful that reporting on topics such as forced labour and child labour has been moved to ESRS 2, which strengthens accessibility and ensures that this information is given appropriate visibility across disclosures. At the same time, ESBG suggests that clearer references to the SFDR be included directly in the Standards, similar to the approach taken in earlier ESRS versions through footnotes. This would further support alignment between the two frameworks and provide more clarity for reporting entities.			
Survey	ESBG WSBI	Association of financial institutions	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	ESBG WSBI	Association of financial institutions	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	ESBG WSBI	Association of financial institutions	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree

Survey	ESBG WSBI	Association of financial institutions	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	FOR ALL: ESBG members are overall positive to the suggested changes to the ESRS standards. The wording is more understandable, more guidance has been added, and the alignment between ESRS 1 and 2 has been helpful in reducing repetition. It is important to ensure significant and meaningful simplification, while at the same time maintaining the level of ambition and the need for robust and harmonized ESG data. Simplification is uneven across standards: While some standards have been meaningfully simplified, others still contain excessive granularity or unclear provisions. Glossary and terminology: Some definitions remain vague or inconsistent, which may hinder implementation and comparability. Pending regulatory clarifications: Key issues such as value chain definition for financial institutions, phasing-in provisions, and treatment of confidential information remain unresolved and affect the overall balance.

Survey	ESBG WSBI	Association of financial institutions	Belgium	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Rainforest Action Network	NGO	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	In paragraph 21.b there is an attempt to define the term 'material', but the definition is circular. AR 4 for para.21 insinuates that "material impacts" is the same as "most significant impacts". However, the latter is only a subset of the former. It is very concerning that there is no minimum standard threshold, above which impacts should be reported (para 28-30; AR 5 for para 30). It is also concerning that companies only need to report when information is 'available without undue cost or effort". Some of the worst social and environmental impacts are not necessarily easy and cheap to measure and may thus remain unreported (paragraph 47) Para 48 implies that double materiality impacts are similar for companies in the same sector, which if it were true, would make company reporting redundant. Finally, the disclosure of location specific information is crucial for a real understanding of an undertakings impacts. The fact that AR 22 and 23 allows undertakings to aggregate information as they see fit, means that many disclosures will be useless for stakeholders, in particular affected communities, and also really hard to verify.			
Survey	Rainforest Action Network	NGO	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We are concerned that the new standards make it optional to screen sites in their materiality assessment. The screening of locations, and the disclosure of impacts by location, is crucial for effective disclosures. Without site specific data, stakeholders will not have the information they need to assess to what extent specific impacts are caused by a certain company. We also strongly recommend making the disclosure of all data points in Appendix A mandatory, and to add some key missing ones, including: - all locations where the company operates - all locations where the company sources from - water use/ year - area and location where land use change occurred in areas owned or managed by the company, as well as in its supply chain - number of animals, by species, it owns/controls/raises/slaughters, on a yearly basis - animal welfare policies (if the company deals with animals) - food system transition plan			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Rainforest Action Network	NGO	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We suggest that disclosure elements for which disclosure is not required, especially those regarding Biodiversity and Ecosystems, are kept in the standards as examples, rather than being removed to the NMIG. This would provide guidance on what kind of information is likely to be relevant and will support the standardisation of metrics.			
Survey	Rainforest Action Network	NGO	United States	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	We agree with EFRAGs concern (Para 61 of Basis for Conclusions) that the introduction of additional reliefs, beyond the ones incorporated by ISSB, will result in additional differences in interoperability and is therefore undesirable. In particular, we are concerned about - para 62 - the extension of undue cost and effort to all metrics, as this will drastically reduce the information that will be reported. It is inherent in the nature of this type of reporting that some datapoints require effort and costs to collect. That is why the onus is on the company, who causes the impacts, to do so, and not on society, following the 'polluter pays' principle. - para 66 - the combination of a relief for metrics due to lack of data obtainable without undue cost or effort. The lack of a timebound milestone by when the companies should have this data, means that this relief can be endlessly used to avoid reporting on key aspects such as supply chain impacts. - para 67 it is important to maintain the hierarchy of inputs, and not replace it with the vague considerations of 'practicability and reliability". - para 76 - it is crucial that Financial Institutions are fully included in the disclosure standards, and the alleged lack of sector guidance should not be a relief to be exempt from disclosure requirements.			
Survey	Rainforest Action Network	NGO	United States	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	It is essential to include a time limit for these reliefs. We believe there is no evidence that shows that reporting on how the company is improving the coverage of its calculation in the next period, will actually work as an incentive to improve disclosures.			
Survey	Rainforest Action Network	NGO	United States	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Rainforest Action Network	NGO	United States	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We dont think ESRS disclosure requirements are unacceptably burdensome. In fact, they seem generally less demanding than those of GRI or IFRS. The current set of datapoints may have been reduced so much, that, considering also all the reliefs, it is not enough to actually paint a comprehensive picture of the impacts of companies.			
Survey	Rainforest Action Network	NGO	United States	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Rainforest Action Network	NGO	United States	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Rainforest Action Network	NGO	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The ESRS is based on the CSRD and the general principles of the Accounting Directive, and has therefore already been subject to a fair presentation regime.			
Survey	Rainforest Action Network	NGO	United States	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets so that there is clarity about how their strategies align, or not, with the goals of the Paris Agreement. Intensity metrics can mask increase in absolute emissions, and are therefore not suitable for this type of disclosures.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Rainforest Action Network	NGO	United States	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3				
Survey	Rainforest Action Network	NGO	United States	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	The information required to be disclosed by AR 26 is important and relevant, but without clear guidelines on the methodology, there is a risk that this AR will be used for greenwashing. There must be clear metrics that indicate when an area can be considered restored, and when its ecological integrity is improved.			
Survey	Rainforest Action Network	NGO	United States	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. Survey	Fidelity International	Asset manager/Investor	Luxembourg	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	We support having additional guidance in this area to complement the materiality assessment. We have seen particular challenges in comparability when different time horizons have been used for materiality assessments and recommend guidance be provided on this specific point, which could involve prescribing specific short-, medium- and long-term time horizons. It would also be helpful to have more transparency on chosen value-chain boundaries and coverage for material areas.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	As an investor, it would be helpful to understand impacts and steps a company is taking to minimise those impacts, providing the amount of reporting required on this is simple and proportionate. We would favour this over solely disclosing on mitigated risks and impacts.

Survey	Fidelity International	Asset manager/Investor	Luxembourg	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We support these changes. We are of the view this would improve the readability of disclosures. We also believe further changes could be made to improve readability of disclosures which can be technical and overly complex - an acknowledgement that reports can be prepared 'in plain English' and be focused on supporting consumer readability may help improve this.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We support the removal of duplicative disclosures which we think will help improve quality of disclosures and implementation for preparers. We support streamlining the prescriptive qualitative aspects of these disclosures.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We support the removal of the 'may disclose' discretionary data points.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We support providing proportionate reliefs for reporting under ESRS, particularly those in line with ISSB. However, we expect to see ISSB requirements rolled out to a broader scope of companies than CSRD, and ISSB does not contain the same value chain restrictions. For this reason, we are concerned a substantial number of companies in scope of CSRD will need to rely on this, compared to ISSB which could allow greater flow of information across the value chain. We have substantial concerns the value chain cap in Corporate Sustainability Reporting Directive (CSRD) could impact the availability of quality data and would expect to see more companies needing to rely on this relief in response to potential supply chain data challenges. We're concerned this could lead to less quality data availability for investors and would encourage EFRAG to remove any value chain caps, and advocate for proportionate supply chain coverage within the broader CSRD text, so companies may not need to frequently rely on this relief frequently. In due course, EFRAG could also consider providing supporting sector-based guidance, within ESRS and VSME, on what metrics are likely to be material and should be reported on.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We consider it sensible to allow reliefs for data which involves an 'undue cost and effort' however would suggest including guidance to provide some guardrails on what would be appropriate to include within this exception. We also favour including the requirement for companies to disclose actions taken to improve coverage. To support interoperability with ISSB, EFRAG could consider removing the "undue cost and effort" exception for an entity's own operations.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We favour Option 1. Option 1 can support interoperability with the ISSB standards and comparability of international disclosure standards. We are expecting these disclosures may be challenging in the initial years but as availability and quality of data evolves, and ISSB reporting begins globally, emerging best practice will continue to develop.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	As investors we look to assess the financial impact of transition and physical risk and see these disclosures as supporting this assessment.

Survey	Fidelity International	Asset manager/Investor	Luxembourg	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We welcome efforts to improve interoperability with the ISSB standards. We note that, as set out in question 19 above, disclosing only qualitative financial effects would not support ISSB alignment. We would encourage EFRAG to allow equivalence with IFRS data points, with a double materiality assessment, to comply with ESRS E1.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	Fidelity International	Asset manager/Investor	Luxembourg	22.E3.	Comments on deleted datapoints in ESRS E3	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	We would like to see the below data point remain to support with assessing SDG alignment for our sustainable investment framework.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	22.E4.	Comments on deleted datapoints in ESRS E4	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	Including disclosures on financial effects is something that EFRAG could consider phasing in as reporting practices evolve.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	22.S2	Comments on deleted datapoints in ESRS S2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	We would like to see the below data point remain to support with assessing SDG alignment for our sustainable investment framework.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	22.S3	Comments on deleted datapoints in ESRS S3	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	Including a disclosure requiring location specific details for impacts & risks for affected communities can help investors understand a companies risk profile and potential actions required			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Fidelity International	Asset manager/Investor	Luxembourg	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Fidelity International	Asset manager/Investor	Luxembourg	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We think this proposed changed should support investors reviewing corporate disclosures in the long term.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Fidelity International	Asset manager/Investor	Luxembourg	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We agree with exclusion for financed emissions but consider operational absolute targets could be reported. Scope 3 Category 15 financed absolute emissions are often the largest GHG for a financial institution. These are driven by the size of inflows/outflows of an asset manager, or for a bank by the size of the balance sheet. By setting an absolute financed emissions target, the financial institution is establishing a conflict of interest with a usual strategy target of a business, which is to grow over the longer term and finance the wider economy. Whilst there is no perfect carbon metric for a financial institution, they tend to set targets on their carbon footprint (Cat 15 Financed emissions relating to scope 1 and 2/ Assets Under Management) as it does not conflict with the commercial strategy. It is very difficult to set targets on Scope 3, category 15 scope 3 emissions relating to the companies they finance as data is incredibly poor and volatile. This stems from poor and historically under disclosure of all scope 3 categories by companies in the wide economy, which they finance. A financial institution can set absolute emissions targets for their own operations in the say way that many do – which relate to scope 1 and 2 – their renewable energy and business travel etc.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We consider it important for SFDR to match the disclosure requirements in ESRS. The focus should be on ensuring ESRS has decision meaningful data, and then matching any SFDR requirements to the ESRS and ensuring no duplication.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We agree it's important to rely on industry-led guidance (including from TNFD and the Science Based Targets Network (SBTN)) on setting nature targets. We would strongly encourage an equivalence is provided for disclosures made under TNFD to help maintain momentum for voluntary disclosures while companies work to comply with ESRS.			
Survey	Fidelity International	Asset manager/Investor	Luxembourg	35.E1-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Scenario analysis requirements should be aligned with the ISSB standards to support consistency and improve efficiency for preparers which have reporting requirements globally.	E1	Disclosure Requirement E1-2 - Climate-related risks and scenario analysis	
Survey	Fidelity International	Asset manager/Investor	Luxembourg	35.E1-8.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We use intensity emissions when setting net zero targets and would like to see intensity emissions remain or, should they be deleted, ensure revenue breakdown is reported to allow for these calculations	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions	
Survey	Fidelity International	Asset manager/Investor	Luxembourg	35.E3-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We would like to see the below data point remain to support with assessing SDG alignment for our sustainable investment framework	E3	Disclosure Requirement E3-4 - Water metrics	
Survey	Fidelity International	Asset manager/Investor	Luxembourg	35.E4-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Including disclosures on financial effects is something that EFRAG could consider phasing in as reporting practices evolve	E4	Disclosure Requirement E4-3 - Actions and resources related to biodiversity and ecosystems	
Survey	Fidelity International	Asset manager/Investor	Luxembourg	35.S2-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We would like to see a specific disclosure point on key supply chain locations. This could help with assessing forced labour risks in value chain and is aligned with other modern slavery regulation.	S2	Disclosure Requirement S2-2 - Engagement with value chain workers, existence of channels for value chain workers to raise concerns or needs and approaches to remedy.	
Survey	Fidelity International	Asset manager/Investor	Luxembourg	35.S3-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We would like to see the below data point remain to support with assessing SDG alignment for our sustainable investment framework	S3	Disclosure Requirement S3-3 - Actions and resources related to affected communities	
Survey	Japanese Bankers Association	Association of financial institutions	Japan	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	- We welcome the revised draft for clearly stating that the DMA evaluation should align with ISSB Standards to a certain extent and avoid excessive costs. Furthermore, the clarification that only topics identified as material need to be reported—rather than the entire topical standards —is particularly helpful, as it enhances both flexibility and efficiency in reporting. - However, it remains unclear to what extent stakeholders across the value chain should be considered to meet the requirements of the standards. Similar to the ISSB, industry-specific guidance could be provided to indicate the minimum disclosure expectations for each sector.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Japanese Bankers Association	Association of financial institutions	Japan	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	- We agree with the provision of clear guidance on how to consider remediation, mitigation, and prevention actions in the assessment of negative impacts. The inclusion of useful examples is particularly helpful for practical implementation. - Nonetheless, it is still not entirely clear to what extent these guidelines contribute to improved comparability in reporting. From a comparability perspective, further clarification or standardisation may be necessary to ensure consistent application across entities.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	- We agree with the improvements in readability, conciseness, and connectivity. - The amendments are beneficial in clarifying that only material topics, not the full topical standards, need to be reported, thereby enhancing both flexibility and efficiency in sustainability reporting. Additionally, the introduction of new concepts such as "only once" and "undue cost and effort" helps reduce the practical burden in identifying IROs, determining the scope of the value chain, and reporting metrics, thereby promoting connectivity with corporate reporting as a whole. - Moreover, these amendments contribute to enhancing interoperability with other international reporting standards such as the ISSB and SSBJ, supporting both practical applicability and global alignment of the ESRS framework.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	- We agree that the proposed amendments reduce the overlap between ESRS 2 and the topical standards, thereby clarifying the reporting requirements. This restructuring strikes an appropriate balance between reducing the reporting burden and ensuring the relevance and comparability of disclosed information.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	- We agree that the proposed amendments have improved the understandability, clarity, and accessibility of the ESRS. In particular, the Non-Mandatory Illustrative Guidance (NMIG) clearly distinguishes between mandatory data points, voluntary data points, and illustrative examples, facilitating an understanding of legal requirements and supporting practical implementation. - These improvements benefit both preparers by reducing the burden and users by enhancing the clarity of information, thereby contributing to the overall effectiveness of the ESRS framework.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	- We welcome the reduction in mandatory disclosure items through the introduction of the Non-Mandatory Illustrative Guidance (NMIG). In particular, the clear distinction within NMIG among mandatory data points, voluntary data points, and illustrative examples helps preparers better understand the scope of reporting obligations and reduces the practical burden. - This structure supports flexibility in reporting while clearly separating legal requirements from supplementary information, thereby contributing to improved quality and transparency in sustainability disclosures.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	- We agree that the proposed amendments provide meaningful burden relief for preparers, and ensure alignment with ISSB Standards.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	- We agree that the proposed relief for lack of data quality on metrics provides necessary flexibility for preparers and contributes to reducing the reporting burden.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Japanese Bankers Association	Association of financial institutions	Japan	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	- Option 2 is welcomed for providing greater flexibility in disclosing anticipated financial effects, thereby reducing the practical burden on preparers. While Option 1 aligns with ISSB Standards, quantitative disclosures would require many entities to develop additional capabilities and tools, making implementation challenging at this stage. - From the perspective of "undue cost and effort," Option 2 offers a reasonable relief mechanism that supports both the effectiveness and practicality in sustainability reporting.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	- While the amendments introduce a certain level of simplification, we remain concerned that some of the disclosure requirements still diverge from those of ISSB Standards. In particular, the quantitative disclosure of the proportion of assets at material transition risk addressed by climate change mitigation actions, as required in paragraphs 41(a) and 41(b), poses practical challenges due to limited data availability. This may conflict with the principle of avoiding undue cost and effort. - We believe that paragraph 41(e), when combined with other qualitative disclosures, can sufficiently illustrate transition risk management practices, potentially rendering paragraphs 41(a) and 41(b) redundant. Additionally, the disclosure of stranded asset ratios based on multiple scenario analyses (41(f)) should be reconsidered for optional disclosure or removal to ensure alignment with ISSB Standards.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	- While the amendments are generally consistent with ISSB Standards, we are concerned that certain disclosure requirements exceed those of ISSB Standards and may impose additional burdens on preparers. Specifically, the quantitative disclosures in paragraphs 41(a) and 41(b) exceed requirements under ISSB Standards, and could be particularly challenging for entities reporting under multiple frameworks. - To enhance alignment with international standards and ensure practical feasibility, such requirements should be reconsidered for optional disclosure or removal.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Japanese Bankers Association	Association of financial institutions	Japan	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	- We do not identify any particular issues with the proposed change to make the six data points mandatory. Specifically, the requirement to disclose biodiversity and nature transition plans is applicable only if (a) nature is deemed a material topic and (b) a plan is already in place. Furthermore, the disclosure is limited to "key features," which ensures flexibility and keeps the reporting burden manageable. - This approach also aligns with voluntary disclosures already made by many organisations under the TNFD framework, making it a practical and acceptable requirement.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Japanese Bankers Association	Association of financial institutions	Japan	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	- We appreciate the explicit emphasis on ESRS being a "fair presentation" reporting framework, as it may help reinforce the application of the materiality principle and improve the relevance of disclosures. - However, we are concerned that the ESRS does not clearly state that immaterial information does not need to be disclosed. As ISSB Standards explicitly specify this point, a similar clarification in the ESRS would help avoid unnecessary disclosures, thereby enhancing the efficiency and practical usefulness of sustainability reporting.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	- We agree that financial institutions should be exempted from disclosing absolute GHG emission reduction targets when they have only set intensity-based targets. For example, in the power sector, emission intensity is often used as a more appropriate metric due to the necessity to meet growing electricity demand while transitioning to cleaner energy sources. - Similarly, for financial institutions whose emissions largely depend on investees and borrowers, setting absolute targets can be impractical. Intensity-based targets are often more reasonable and reflective of their operational realities. Therefore, the proposed exemption is appropriate and supports flexibility and feasibility in implementation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Japanese Bankers Association	Association of financial institutions	Japan	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	- We agree with the introduction of the new threshold for country-by-country disclosure under ESRS S1-5 and S1-7. This revision helps reduce the reporting burden for preparers by narrowing the scope of required disclosures, while still ensuring that users receive meaningful and relevant information.			
Survey	Japanese Bankers Association	Association of financial institutions	Japan	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	Japanese Bankers Association	Association of financial institutions	Japan	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Japanese Bankers Association	Association of financial institutions	Japan	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Japanese Bankers Association	Association of financial institutions	Japan	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Japanese Bankers Association	Association of financial institutions	Japan	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	German Environment Agency	National supervisory authority & regulator	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	see our opinion paper, section 2, ESRS 1, para. 1 (page 3)			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	see our opinion paper, section 2, ESRS 1, para. 2 (page 4)			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	German Environment Agency	National supervisory authority & regulator	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	German Environment Agency	National supervisory authority & regulator	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	see our opinion paper, section 2, ESRS 2, para. 4 (page 5)			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	German Environment Agency	National supervisory authority & regulator	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS2; E1; E2; E3; E4; E5	Feedback on NMIG for ESRS 2 and E1 to E5 is provided in our repsonse to Part 3 of the questionnaire (comment table).			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	see our opinion paper, section 2, ESRS 1, para. 3-4 (page 4)			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	The relief should only apply to value chain metrics but not for own operations. See our opinion paper, section 2, para. 4 (page 4).			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We recommend that EFRAG chooses Option 1 which would require reporting of quantitative information and, if not possible, qualitative information. Only this option is in line with EFRAG's mandate to improve interoperability with the IFRS standards. See our opinion paper section 2, ESRS 2, para. 3 (page 5)

Survey	German Environment Agency	National supervisory authority & regulator	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	German Environment Agency	National supervisory authority & regulator	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We note that certain proposed amendments might impede interoperability between the ESRS and IFRS S1 and S2. However, given that the IFRS standards have not been tested in practice and have simplification potential on their own, we recommend that EFRAG prioritizes simplifications and improvements derived from reporting experience over IFRS interoperability.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	German Environment Agency	National supervisory authority & regulator	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	Overall comment: Despite significant reductions of "shall-datapoints", EFRAG achieved to preserve the key requirements that keep the core of the ESRS intact. However, for the environmental reporting standards, we note that a further reduction would likely impair their overall usefulness. We submit our detailed comments in part 3 of the questionnaire respone.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	22.E1.	Comments on deleted datapoints in ESRS E1	I agree	We submit our detailed comments in part 3 of the questionnaire respone.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	22.E2.	Comments on deleted datapoints in ESRS E2	I agree	We submit our detailed comments in part 3 of the questionnaire respone.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	22.E3.	Comments on deleted datapoints in ESRS E3	I agree	We submit our detailed comments in part 3 of the questionnaire respone.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	22.E4.	Comments on deleted datapoints in ESRS E4	I agree	We submit our detailed comments in part 3 of the questionnaire respone.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	22.E5.	Comments on deleted datapoints in ESRS E5	I agree	We submit our detailed comments in part 3 of the questionnaire respone.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We support the decision to include mandatory metrics on water withdrawal and discharge as well as on biodiversity transition plans. Reporting information on water withdrawals and discharges should not come with additional effort because both figures are inputs to the already existing metric on water consumption. For biodiversity transition plans, EFRAG introduced conditions on when they would need to be disclosed. Also see our opinion paper on ESRS E3 and E4.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The datapoint on secondary microplastics is already included in the ESRS delegated act, but the respective requirement is unclear. In this regard, we consider the proposal an improvement. However, specific calculation guidance is still missing and should be developed in the NMIG.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	see our opinion paper, section 2, ESRS 1, para. 1 (page 3)			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The issue is primarily related to Scope 3 emission reduction targets and not only relevant for financial institutions. EFRAG should consider to allow reporting of intensity-based targets for Scope 3 as an alternative to asbolute targets. Scope 1 and 2 targets should be repoated in absolute terms.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree

In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Please see our detailed feedback on ESRS 1 and 2, ESRS E1, E2, E3, E4 and E5 in the excel sheet submitted in part 3 of the questionnaire and in our opinion paper.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	33.E_5.	ESRS E5:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Please see our detailed feedback on ESRS 1 and 2, ESRS E1, E2, E3, E4 and E5 in the excel sheet submitted in part 3 of the questionnaire and in our opinion paper.			
Survey	German Environment Agency	National supervisory authority & regulator	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Please see our detailed feedback on ESRS 1 and 2, ESRS E1, E2, E3, E4 and E5 in the excel sheet submitted in part 3 of the questionnaire and in our opinion paper.

Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The overall simplification of Chapter 3 is welcome. We find the new chapter 3.5. with practical considerations particularly helpful, as it has a potential to relieve large portion of the burden undertakings faced performing their materiality assessments. However, we have several comments to changes we don't agree with: (1) The materiality of information principle should not be applicable to ESRS 2, as it provides key information for users on ESG management as required by CSRD and may result in omitting fundamental information required in sustainability statements, such as on the DMA process and its results, or the governance over sustainability matters, and details on the undertaking's business model and strategy. The principle of materiality of information is highly judgmental and should be applied with caution. (2) Undertakings should not be allowed to include non-material information in sustainability statements, as this will obscure material information. Companies have many other means to communicate to their stakeholders non-material sustainability related information and there is no need to include these information in official, regulated annual reports. (3) Summarizing the list of topics in current Appendix A to only two-level structure is not very helpful, it was more useful as a three-level structure. Maintaining a three-level structure would not add any burden, as the list is illustrative only. We also propose to add for clarity some changes in the list: (a) In "Climate change": add "Loss and damage" (b) In "Circular economy and resource use": add "Product and service design related to circular economy principles" (c) In "Climate change" replace "Energy" with "Energy, including use of fuels and energy efficiency"			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Adding Annex C may provide much needed clarity for undertakings performing their DMAs. However, several elements of the Annex need to be amended. If the intention is to streamline reporting by allowing mitigated impacts to be excluded, the standard should state that such exclusion is only permitted if the impacts and the related mitigation actions were disclosed in a previous report – and that these impacts may be referenced rather than repeated. Under no circumstances should the standard include statements such as 'in principle, no need to report on impact.' Such wording would create major gaps and undermine the reliability and comparability of the materiality assessment. "If an impact occurred in the reporting period and no remediation action has been taken" The wording "If an impact occurred" suggests that to identify a topic as actual negative, "something" would need to happen. E.g. an accident. In practice, for a manufacturing company it is commonly understood that "employee health and safety" is an actual material topic regardless of whether any accidents occur. In reference to par. 36 if successfully remediated negative impacts e.g. on employee health and safety do not become positive impacts, then does the topic become non-material? The sentence in the table of the Appendix C suggests that the topic becomes immaterial: "If the potential impact was material within the reporting year, but prevention or mitigation action has been taken before the reporting date such that the impact no longer exists (...) in principle no need to report the impact, as it is not material." In practice, a manufacturing company that manages employee health and safety effectively, with no incidents or accidents occurring, might classify this topic as immaterial, despite the substantial resources required to maintain it. In a logical approach, this does not make sense.			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We agree with most of the changes introduced in relation to interactions between ESRS 2 and topical standards. However, the requirement to disclose whether the undertaking plans to implement policies, actions and targets for a material topic, and in which timeframe, should remain as a "shall". Sustainability statements don't only document the past, but are also future-oriented. Allowing laggards in sustainable transition to remain silent on their material topics that have not been managed gives them an unjustified competitive advantage in relation to companies that are more advanced in managing sustainability matters. It should be the other way round. Requiring companies to disclose this information (on plans regarding adoption of PATs) is not burdensome, as all the information is readily available in-house.			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We don't have comments regarding the content of particular elements of the NMIG, only comments regarding its status. We propose (at the Commission's discretion) choosing only one of the following two options: (A)Inclusion of the contents of the NMIG into the Delegated Act. In this case each element of the NMIG should be included in the main body of each standard, in a clearly separable way, right after the applicable DR and AR. In this way, the report preparer would read in one place the disclosure requirement, the corresponding application requirement (in case it exists) and the corresponding non-mandatory illustrative guidance (in case it exists) (B)Leaving the contents of the draft NMIG for EFRAG to implement it in a series of Implementation Guidance documents to be issued in the future. Both options result in an understandable structure of the standards and their accompanying documents. We recommend choosing option (A). Development of NMIG as another layer of documents, besides the mandatory standards and the non-mandatory EFRAG IGs may lead to further confusion among report preparers, users and auditors.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	Simplification of ESRS, restructuring of the standards, elimination of two thirds of datapoints, including all "may" datapoints that created confusion is the main relief report preparers receive with the set of revised ESRS. Unfortunately, the inclusion of many additional "reliefs" will have a detrimental effect on the competitive position of many companies well advanced in sustainability transition, on comparability and reliability of the reports and on the transparency needed to achieve the objectives of the EU Green Deal. Any additional reliefs, if introduced, should be only temporary, i.e. for the first year, two years or three years of application of ESRS in a particular company. Introduction of permanent reliefs contradicts the very nature of mandatory reporting standards. If a provision is too difficult for undertakings to comply with at all times, it should be deleted from the standards. If a provision may be difficult for first time adopters, a temporary relief should be introduced. The relief "undue cost or effort" should be applicable only for the DMA process. Regarding difficulties related to collecting data from the value chain, the general 3-year relief for presenting information on metrics related to value chain is sufficient.			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	This relief should not be applicable at all for metrics related to own operations. The current draft ESRS 1 provision allows companies to hide inconvenient information, for example on their gender pay gap or high number of accidents, only due to the reason that it was difficult to collect all information from own operations. That provision will not be used by the majority of companies that fairly present their situation, it will only be abused by a small portion of companies. As a result, from this provision may benefit only companies that are trying to hide some information. Additionally, introduction of the undue cost or effort in relation to metrics related to own operations will have a detrimental effect on comparability of information disclosed in reports by all companies and by companies in particular sectors. Lack of comparability of reports will be detrimental to the goals of the EU Savings and Investments Union.			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We prefer Option 1, as it is more closely aligned with IFRS. In our view Option 2 might provide relief in short-time horizon, however, in long-term perspective European undertakings would be in a disadvantaged position in relation to companies from other jurisdictions that adopt IFRS standards. Financial institutions will anyway need quantitative information on anticipated financial effects from non-financial companies to assess risk related to credits and investments. Even if these information is not mandated by ESRS, companies will have to provide them. At the same time we acknowledge that less experienced companies and first time adopters may face difficulties in quantifying anticipated financial effects. This should be addressed with two solutions: (1) A three-year transition period should be granted for mandatory disclosure of quantitative anticipated financial effects (according to SBM-3 and E1-11); in the transition period undertakings shall report qualitative anticipated financial effects. (2) EFRAG should develop, on it's own or as a response to a mandate from the European Commission, a uniform methodology to quantify anticipated financial effects. Development of this methodology should be done in no more of 1.5-2 years, leaving companies another 1-1.5 years to apply it before the end of the transition period. The methodology should be accompanied by appropriate tools facilitating it's application.			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	ESRS E1 - 40. (b) - Please note that this datapoint is required by EBA guidelines on ESG risks point 28.a.vi.			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	22.E1.	Comments on deleted datapoints in ESRS E1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	ESRS E1 E1-2 - Climate-related risks and scenario analysis The simplification regarding the exclusion of climate risks from separate disclosure is entirely appropriate, but the transfer of information on how risks are identified to the NMIG is inappropriate. The analysis should continue to include, among other things: identification of risks over different time horizons, assessment of the sensitivity and exposure of assets to risks, determination of the probability, scale, and duration of these risks, development of an analysis based on at least one high-emission climate scenario. It is necessary to have a list of risks, which is the starting point for further analysis. Consequence: • the lack of risk list will make it difficult to compare data between entities, • an entity may not have knowledge or awareness of the scale of these risks and thus omit significant risks in its analysis – incorrect risk assessment • the lack of consistency with the taxonomy regulation and SFDR.

Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Unadjusted gender pay gap is a metric that very rarely presents the actual situation in an undertaking in a fair way. The employment structure and the sector of the company often drive high level of unadjusted gender pay gap. We propose that the company is required to disclose, on a mandatory basis: (1) unadjusted gender pay gap in case unadjusted gender pay gap is adequate to fairly present the situation in the company; (2) unadjusted and adjusted gender pay gap in case unadjusted gender pay gap is inadequate to fairly present the situation in the company; in this case adjusted gender pay gap disclosure should be accompanied by disclosure of the methodology used to calculate it. This construction of the disclosure requirement would add no additional datapoints while allowing companies to explain the actual structure and reasons for differences in remuneration for men and women.			
Survey	Polish Association of Listed Companies	Business association (other than association of financial institution)	Poland	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	The current replacement/formulation is insufficient to meet the CSRD's objectives with regard to protecting SMEs. There is a risk of a lack of visibility regarding the treatment of SMEs by reporting undertakings. As policies may not include provisions that specifically refer to SMEs, and even if they do, these may not be complied with, we believe that the following metrics should be added to reflect the actual behaviour of reporting undertakings towards SMEs. Both are necessary to understand the current situation of SMEs in the economy. a) the average time it takes the undertaking to pay an invoice from the date when the contractual or statutory term of payment for SMEs starts to be calculated, in number of days, and the average time the undertaking takes to pay an invoice from the date when the contractual or statutory term of payment for entities other than SMEs starts to be calculated, in number of days b) the average time it takes the undertaking to pay an invoice from the date when the payment for SMEs is due, in number of days, and the average time the undertaking takes to pay an invoice from the date when the payment for entities other than SMEs is due, in number of days.			
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	NMIG provides good clarification and understanding of the requirements using illustrative examples. This change is an improvement and it is a welcome move to have this as a stand-alone document.			
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	I agree with Option 2, as it will reduce the the reporting requirement but still provide the option to report quantitative information voluntarily.			
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree

Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets because an exception could disadvantage other sectors.			
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree

Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	TitanX Engine Cooling	Preparer (non-financial preparing a sustainability report)	Sweden	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We appreciate the clarifications on IROs and related topics (ESRS 1, paras. 2 and 22), which enhance understanding. However, the simplified DMA approach, especially for complex value chains, may narrow the scope of disclosures. Additional guidance is required to ensure assessments remain robust. We support more detailed reporting on companies' assessment processes. The determination of negative impacts guided by scale, scope, and irremediability, aligns well with the UNGPs and OECD Guidelines. Yet, annual reports often lack sufficient detail on how these indicators and impacts inform their DMA (methodologies) and materiality thresholds. We welcome the flexibility to choose between top-down and bottom-up DMA approaches. Making Appendix A illustrative rather than prescriptive appropriately reduces rigidity. While the top-down method can be pragmatic, companies should clearly document their process and address potential blind spots. A quick scan of initially non-material topics may help mitigate these blind spots. Reporting at the IRO level may reduce comparability across companies. Clear guidance and examples illustrating differences between topical and IRO-level disclosures would support preparers in making informed choices. We also encourage undertakings to disclose what triggered changes in materiality assessments over time. Value Chain Integration: We recommend stronger alignment between due diligence and value chain reporting. When negative material impacts are identified through due diligence, stakeholder engagement could be required. Companies should explain (i) chosen value chain boundaries, (ii) coverage per material topic, and (iii) data quality for key metrics. Where policies or targets do not cover the value chain for material IROs, constraints and intended leverage mechanisms should be clarified, including time-bound plans for extension.

Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We observe a difference in reporting approaches (net/gross) among data providers. For example, some data providers actually engage in dialogue with companies, while others do not. The "actual impact situation" therefore remains somewhat ambiguous and subjective. If companies were to report more on the "outcomes of any mitigation or prevention measures implemented before the impact occurred," this could potentially achieve greater uniformity in the assessment of adverse impacts. The annual accounts primarily reflect a net approach, and the auditor's report on the sustainability report implicitly reflects a net approach. A gross approach results in a more comprehensive sustainability report based on CSRD than a net approach. This expansion is not in line with the intended simplification.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We support reducing duplication, particularly through clearer guidance on connected information. We support the proposed amendments. When conducting sustainability disclosure analysis, we find that repeating content across sections of the annual report (most notably regarding policies, actions, and targets) only enhances complexity at the expense of transparency. We also welcome the use of appendices for detailed metrics. This structure enhances readability and provides a clearer overview for users, while maintaining access to relevant data.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We do not support the removal of the requirement to disclose whether a Policy, Action, or Target (PAT) or timelines have been removed for material topics. Transparency is essential, particularly for material negative impacts and risks. Therefore, choosing to remove PATs should require an explanation. Without an explanation, companies may simply state "no PAT" without clarifying existing gaps or intended actions, weakening accountability and comparability for investors. We also have concerns about the reformulation of certain mandatory datapoints into Application Requirements (ARs). The legal status of ARs may be unclear to preparers, potentially leading to inconsistent interpretation and reduced enforceability. Clear communication that ARs represent mandatory methodological guidance is essential to maintain consistency and reliability in reporting. Finally, we support the restructuring of the reporting architecture, which promotes conciseness and reduces duplication. It is important that companies focus on reporting what is most material to their operations, while maintaining clarity and completeness for users of sustainability information.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We welcome the proposed amendments, which significantly enhance clarity and accessibility. The removal of "may disclose", relocation of mandatory application guidance under each Disclosure Requirement (DR), and reformulations align well with Lever 4's objective of improving understandability, clarity and accessibility. The restructuring of ESRS 1, clearly separating Disclosure Requirements (DRs) and Application Requirements (ARs), is a positive step towards useability. Furthermore, removing sub-subtopics and being more consistent with the use of topics and sub-topics improves navigation and interpretation. The clearer articulation of double materiality, especially the distinction between impact and financial materiality, supports more consistent application across sectors. To build on these improvements, we recommend to: 1. Begin the ESRS 1 with a clear statement that ARs linked to DRs are mandatory and specify whether they are subject to assurance. 2. Introduce stable identifiers for each mandatory datapoint and AR (e.g., E1-6.M1 for a datapoint, E1-6.AR1 for its application requirement). This would improve navigation, reduce tagging errors, and support high-quality digital reporting and tool integration. These enhancements would make the distinction between mandatory and non-mandatory content immediately clear, consistently applied, and easier to implement across systems. We therefore support the amendments, subject to these refinements, which are fully aligned with the intent of Lever 4.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We acknowledge that the Non-Mandatory Illustrative Guidance (NMIG) can offer valuable support to companies by clarifying reporting expectations and providing practical examples. This can enhance consistency and improve the decision-usefulness of sustainability information for investors. However, the current legal status of NMIG remains unclear, which may lead to interpretive uncertainty. We support EFRAG's recommendation that NMIG content should not be included in the Delegated Act. Incorporating illustrative material into legally binding regulation could blur the distinction between mandatory and non-mandatory content, potentially increasing compliance burdens and undermining the simplification objectives. Should the European Commission decide to include NMIG content in the Delegated Act, we recommend it be presented as a separate annex. The annex introduction should clearly state that the content is for guidance purposes only and does not carry compliance obligations. It should also explicitly confirm that undertakings are not required to justify deviations from these illustrative elements, thereby maintaining a clear distinction from mandatory disclosure requirements.

Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We support the introduction of horizontal undue cost or effort relief. However, safeguards are essential to prevent overuse (particularly in value-chain metrics) which could undermine data consistency and comparability. Companies invoking this relief should disclose the rationale, scope excluded, and any material gaps to preserve decision-usefulness for investors. On the use of estimates, we acknowledge the benefit of flexibility for preparers. At the same time, investors require estimates that are assurable, transparent, and comparable. We recommend clear criteria for estimation methodologies, including disclosure of bandwith of uncertainty, data coverage ratios, and plans to improve data quality over time. This will help maintain the integrity of reported information. Regarding financial effects, we support Option 1, which aligns with IFRS relief and is familiar to large undertakings that fall within the scope of the CSRD. Quantitative disclosures are critical for valuation, performance analysis, and stewardship. ESRS E1 must cover impact & risk (target alignment and transition investments). Competitive advantages are derived from linking sustainability impacts to financial statements, not merely harmonizing language.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We support allowing investee companies to balance thorough reporting with avoiding undue cost or effort. This flexibility may be most relevant during early implementation phases. However, we stress the importance of continuous improvement of reporting efforts by companies over time. To maintain reliability and comparability, especially across peers and reporting periods, any room for using reliefs should be accompanied by clear safeguards. These include: a transparent rationale for invoking the relief, criteria used in the decision, disclosure of excluded scope, and time-bound plans to improve data coverage and quality. As noted in the Basis for Conclusions, aligning these reliefs with IFRS S1 enhances interoperability.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We prefer option 1, but stress the importance of the applicable conditions and safeguards (on the use of the relief) to be further specified. We believe that the availability of climate risk metrics is important. For that reason, the effects of both options should be assessed as prepares often raise undue costs and burden as a reason for not providing this information. It would be valuable to assess the conditions under which it can be invoked by a preparer and whether it could negatively impact on the wide availability of climate risk metrics. In terms of conditions and safeguard, one can consider for example: * Phase-in requirement of the original ESRS, meaning that companies could comply with qualitative information in the first three years of reporting, and afterwards would need to report quantitative information. *Transparency is essential: Companies should provide a clear rationale for invoking any relief, specify the methodology and uncertainty assumptions applied, and outline concrete improvement plans — comparable to the 'best-effort' obligation under SFDR.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We welcome the amendments aligning disclosure criteria with data requested by banks. As noted in the log of amendments, this alignment with IFRS S2 supports interoperability and consistency. We recognise the practical challenges companies may face due to evolving methodologies and limited data availability. To ensure disclosures remain both feasible and decision-useful, we strongly support the consistent application of the comply or explain principle. Under this approach, companies should disclose the required quantitative information by default. Where this is not possible, a clear and substantive explanation should be provided. Such disclosures offer valuable insights into a company's data infrastructure and risk management practices. Applying comply or explain provides short-term flexibility while promoting transparency and long-term improvement. It supports the ambition of full quantitative reporting as methodologies mature, ensuring the framework remains practical for preparers and useful for investors.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We welcome the increased interoperability between ESRS and IFRS S1/S2 (both in wording and the reliefs) We support maximum interoperability, provided it does not compromise the ESRS's double materiality principle. Most asset owners (pension funds) require both the financial dimension offered by IFRS S1/S2 and the broader impact dimension of ESRS. Key considerations: ESRS E1 must remain broader than IFRS S2, covering both impact and risk dimensions, including target alignment, transition CAPEX, and forward-looking metrics. The true value for investors lies in linking sustainability impacts to financial statements, not merely harmonizing terminology.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We consider the proposed datapoints highly relevant for investors, as they clarify key elements essential to assessing a company's sustainability performance and risk exposure. Their inclusion can enhance transparency, comparability, and the overall decision-usefulness of reported information.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome the emphasis on ESRS as a fair-presentation framework, aligned with IFRS S1, and with materiality as a general filter. This could help reduce 'checklist-reporting' and imrove decision-useful information for investors. There is, however, the concern that 'fair presentation' could be interpreted by auditors as 'true and fair view' of the annual accounts, but this is only applicable with reasonable assurance, not with limited assurance (as prescribed by the CSRD). This mean that, in line with paragraph 51 of the BfC, it should be made sufficiently clear that it is the reporting company's role to assess materiality, while the assurance providers executes only a review of the process. Since EFRAG indicates that it is not their role to specify the auditor's role and mandate, we ask EFRAG to address this issue with the European legislator. However, some question whether fair presentation should solely on management judgement. To safeguard comparability and reliability, members support some sort of safeguards. For example, for the accountant to monitor the fair presentation.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	We welcome the inclusion of key elements such as collective bargaining and periodic revision of minimum wages, which are relevant for assessing wage adequacy. However, we share concerns raised by EFRAG SRB members regarding clarity and comparability. To support investor analysis, it is essential that companies disclose which prong of the wage adequacy methodology is used. Without this, it is difficult to assess the robustness of reported figures or compare across peers and through time. We recommend referencing the ILO's internationally recognised definition of a living wage to strengthen consistency. As currently phrased, adequacy may be interpreted as meeting national minimum wage levels, which in many non-EU countries fall short of covering basic needs. We are convinced that the current phrasing risks misrepresenting wage conditions and undermines comparability. The current hierarchy of wage indicators could also lead to misleading conclusions. A company reporting 100% of employees earning at least the minimum wage may appear to outperform a company that reports 80% earning a living wage, despite the latter reflecting a higher standard. We suggest reversing the order: prioritise living wage estimates, and only refer to minimum wage data where living wage benchmarks are unavailable. Finally, we welcome EFRAG's field testing initiative, which will help refine the methodology and improve practical implementation.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We support the consolidation of datapoints and removal of overlaps, as this can improve readability and reduce duplication for preparers. However, it is essential that investor use-cases under SFDR remain fully supported. For asset owners and -managers relying on ESRS data to meet SFDR Annex I PAI reporting, changes must ensure complete and computable coverage of all relevant indicators (even after deletion and mergers). All SFDR Table 1 datapoints should remain mandatory within ESRS topics. These indicators are critical to the functioning of the Sustainable Finance Disclosure Regulation and must remain accessible to financial institutions. We specifically object to the proposed removal of Indicator 3, table 1 (Gross GHG emissions intensity). The rationale that users can calculate this themselves overlooks practical challenges: - It creates inefficiencies and increases the burden on financial institutions. - It risks inconsistent methodologies across undertakings and may promote cherry picking. - It undermines the SFDR's goal of providing standardised, comparable data. We would also prefer the obligation to report total emissions distinctly (even though it can be derived from combining Scope 1, 2, and 3 figures). Yet, the intensity ratio is a distinct and decision-useful metric that is of far greater importance to us. Its removal could lead to misleading comparisons and reduced data quality.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	The ESRS GDR-T still require companies to publish information on the methodology, baseline value, scope of target etc.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We believe the adjusted gender pay gap is a more meaningful indicator for investors than the unadjusted metric, as it better reflects wage equity and supports robust peer and trend comparisons. While we understand the unadjusted metric was introduced to align with SFDR requirements, it is worth noting that the ESAs have previously acknowledged its limitations and proposed replacing it with the adjusted metric in the revised RTS. This was not pursued due to alignment constraints with the ESRS at the time. We see this as an opportune moment to signal that both ESRS and SFDR should adopt the adjusted gender pay gap as the primary datapoint. This would improve decision-usefulness and better reflect investor needs. The additional reporting burden for companies is expected to be limited, as the adjusted metric is already widely used in response to investor demand.			
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	We recommend greater transparency for the procurement practices of large undertakings, as these can significantly influence value chain impacts. For example, strict contractual terms (such as tight delivery deadlines) may unintentionally contribute to adverse labour conditions, including excessive overtime. Improved transparency in how suppliers are managed would help investors better assess social risks and the effectiveness of a company's due diligence processes.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Dutch Federation of Pension Funds	Association of financial institutions	Netherlands	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We recognize that the ESRS are overly burdensome, and a significant number of data points is irrelevant for investors and stakeholders. At the same time, it needs to be avoided that important data points for pension investors will be removed that are relevant for the responsible investment policies of pension funds or their own reporting requirements under the SFDR . The following points are most relevant for Dutch pension fund investors: ESRS 2 •Governance (2)GOV-1; GOV-2; GOV-3; GOV-4; GOV-5 •Strategy (3)SBM-3 •Metrics and Targets (5)MDR-M; MDR-T ESRS E •Climate and Energy (E1)E1-1; E1-3; E1-4; E1-5; E1-6; E1-7; E1-8; E-9 •Pollution (E2)E2-4; E2-5; E2-6 •Water and Marine Resources (E3)E3-1; E3-4; E3-5 •Biodiversity and Ecosystems (E4)E4:1; E4-2; E4-4; E4-5; E4-6 •Resource Use and Circular EconomyE5-4; E5-5 ESRS S •Own Workforce (S1)S1-1; S1-2; S1-6; S1-7; S1-8; S1-9; S1-13; S1-14; S1-16; S1-17 •Workers in the Value Chain (S2)S2-1 •Affected Communities (S3)S3-1 •Consumers and End-Users (S4)S4-1 The majority of these data points have been maintained in the exposure draft. We support this decision. Moreover, the questionnaire states that some requirements were not changed in the amended ESRS as they are subject to level 1 changes. This amongst others relates to the meaning of 'compatibility with 1.5 degrees" for the Transition Plans disclosures. In that respect we do note that clarification is needed, for example re. the base year (reference point) for measuring the reduction of greenhouse gas emissions and setting climate targets. Finally, we propose EFRAG to develop a standard model report that includes the minimum reporting requirements per ESRS, such as a structure, table of contents with tables and/or graphs, and explanatory notes.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	It is considered appropriate, provided that verification of the information is not required when it originates from another document mandated by European regulations that does not itself require verification. Specific cases: Annual Corporate Governance Report and Annual Report on Remuneration of the Directors			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The use of "MAY" should be avoided in a text that is otherwise drafted entirely with "SHALL". For example, in ESRS 2: BP 2 - AR 1 and GOV 3 - AR 13. The concern is that "MAY" can be interpreted either as a checklist or as the only available options, when in reality there may be others. Therefore, the text should be limited to "SHALL" statements, and any "MAY" provisions should either be moved to the NMIG or removed altogether.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	Moreover, in relation to point 4, we propose that it should be extended to all metrics in general.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Not all transition risks are estimated based on their singular impact on the company's assets. It is even possible that some sectors may not need to analyze any of their transition risks by asset. Therefore, we believe it would be most appropriate for the entire section 41 to be considered as requirements to be met when applicable, not in all cases.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Agreed, as long as ISSB requirements that were not included in the CSRD are not imposed on us.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	It contradicts the principle of simplification and entails increased reporting requirements.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	It contradicts the principle of simplification and entails increased reporting requirements.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Having limited assurance verification may not reconcile very well with the fair presentation approach.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Why should they be exempted?			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We respectfully disagree with the proposal to require reporting of employee-related data at the individual country level. Telefónica operates in a wide range of geographies, and while we are fully committed to transparency and to providing high-quality sustainability reporting, we believe that a breakdown by country is neither proportionate nor appropriate. Reporting at the regional or business unit level provides stakeholders with a clearer and more meaningful view of our workforce structure and management practices. By contrast, a country-level split does not enhance the understanding of our approach to human capital management; instead, it risks placing excessive emphasis on immaterial fluctuations in smaller markets and distorting comparisons across companies and industries. Consolidated or regional data ensures greater consistency and comparability, reflecting the true scale and relevance of our operations. In addition, changing the reporting thresholds would require recalculating previously reported information from previous years to make it comparable, which means more work.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We acknowledge the efforts made to refine the methodology for the calculation of non-EU adequate wages under ESRS S1. However, we believe that the methodology should be simplified and anchored exclusively in the use of statutory minimum wages as the reference point for adequate wages in all cases. Minimum wages provide a clear, objective, and verifiable benchmark, recognized by governments and embedded in national legislation. They ensure consistency across jurisdictions and allow companies to provide transparent and comparable information. Using statutory minimum wages as the single standard avoids unnecessary complexity while maintaining the clarity and reliability that stakeholders expect. Introducing additional layers, such as collective bargaining agreements or sector-specific frameworks, complicates the analysis and may create inconsistencies between markets, particularly where such frameworks are fragmented, non-binding, or unavailable. For multinational groups operating in diverse jurisdictions, this heterogeneity poses a significant challenge to feasibility, comparability, and assurance. We support the requirement for companies to disclose which methodological "prong" has been applied. This disclosure would enhance transparency and comparability, giving stakeholders clarity on the approach used without forcing reliance on heterogeneous sources or alternative definitions of adequacy that are difficult to standardize or assure. While we acknowledge the relevance of living wage debates and related international discussions, we believe that ESRS should not compel companies to use data sets or frameworks beyond statutory minimum wages. The concept of adequacy varies widely between countries and is influenced by economic, social, and cultural contexts. Attempting to standardize these divergent approaches within a single reporting framework introduces subjectivity and increases reporting burdens without adding proportional value. We therefore consider that statutory minimum wages should remain the sole baseline for defining adequate wages in EU and non-EU contexts, ensuring feasibility, consistency, and comparability across jurisdictions.			
Survey	Telefónica, S.A.	Preparer (non-financial preparing a sustainability report)	Spain	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Our proposal is to maintain it as a voluntary DP with global scope, where the calculation methodology is subject to determination by the company. In our case, the adjusted gender pay gap is an indicator with potential to support the qualitative remuneration DPs

Survey	Impronta Etica	NGO	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Impronta Etica positively assesses the work carried out by EFRAG in simplifying the Double Materiality Assesment process, while acknowledging the presence of some underlying critical issues. Two specific aspects of the simplification are particularly valued: the removal of "sub-sub topics" from the list of material topics, and the implementation of the possibility for companies to adopt a top-down approach in the double materiality process. These changes provide companies with greater flexibility in assessing the relevance of information, while at the same time maintaining the robustness of the functioning system of the process. However, in order to ensure proper implementation according to the new approach, EFRAG is encouraged to include examples and guidance tools that concretely illustrate the application of the described elements. Practical examples are indeed considered necessary by companies to fully understand the required procedures and the implications arising from the adoption of the new and reinforced top-down approach to relevance assessment, as outlined in the new draft Standards.			
Survey	Impronta Etica	NGO	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Impronta Etica acknowledges and appreciates EFRAG's efforts to clarify the most critical aspects of the previous ESRS Standard, but expresses partial disagreement with the new guidelines regarding their clarity and contribution to enhancing the comparability of reporting. The text of the Standard concerning remedy, mitigation, and prevention actions within the double materiality process remains unclear and linguistically complex. This complexity may generate significant difficulties for companies, opening the way to possible divergences in the interpretation of the text. Furthermore, the lack of practical examples exacerbates these difficulties, making it challenging for companies to fully understand how to approach this section of the double materiality assessment process, and ultimately failing to clearly demonstrate the intended simplification. The need to include practical examples and guidance tools to illustrate how to concretely implement the changes introduced is therefore reiterated. In addition, to further streamline the double materiality process, it is suggested to extend the changes introduced also to the risk assessment system. Finally, it is recommended to provide a deeper definition of opportunities, in parallel with what has already been done for positive impacts, in order to harmonize and comprehensively clarify practices as a whole.			
Survey	Impronta Etica	NGO	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Impronta Etica acknowledges the work carried out by EFRAG and welcomes the proposed amendments introduced by the technical body. The Association particularly values two aspects which, when combined, provide more relevant and concise reporting, thereby enhancing overall connectivity. First, the introduction of the option to include an executive summary is considered highly valuable. This tool can indeed facilitate communication with investors and other external stakeholders by providing a clear and accessible overview of the entire report. Furthermore, the use of appendices for more technical and granular data helps to streamline the main body of the reporting document. This choice contributes to avoiding repetition and redundancy of information, supporting a more coherent and less fragmented view of corporate reporting as a whole.			
Survey	Impronta Etica	NGO	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Impronta Etica welcomes the simplification adopted by EFRAG, positively assessing the removal of voluntary datapoints ("may disclose"), which often caused confusion among companies, particularly following the double materiality assessment process. The integration of datapoints and "Application Requirements" into the main body of the instrument represents another crucial step that contributes to making the Standards clearer, more readable, and more accessible for companies. However, despite these significant changes, Impronta Etica hopes that guidance and alignment tools will be provided for auditors and individuals responsible for performing verification audits of the sustainability statement. This would reduce the risk of potential divergent interpretations regarding the reduction of information now required from companies and ensure robustness and consistency in the application of the implemented changes.			
Survey	Impronta Etica	NGO	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Impronta Etica partially agrees with the changes introduced, recognizing EFRAG's efforts to reduce reporting burdens, but wishes to express some concerns regarding the solutions adopted. In particular, there is a need for greater clarification on the use of estimates. The concern is that the lack of standardization in this area could compromise the quality and reliability of the data, making it uncertain and unclear. This issue further undermines the comparability of information, which is already significantly affected by the absence of sector-specific Standards. Furthermore, Impronta Etica emphasizes that smaller companies also require additional support in this process. The role of EFRAG is therefore crucial, from a capacity-building perspective, in providing practical examples and appropriate calculation parameters to enable companies to produce reliable estimates and ensure complete and transparent reporting, in line with the objectives of the Green Deal.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Impronta Etica	NGO	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Impronta Etica agrees with the work carried out by EFRAG. The Association considers that the amendments proposed by the technical body represent a necessary compromise between the risk of low-quality available data and the need for transparent, complete, and non-redundant reporting. The proposed flexibility is aligned with the objective of focusing companies' attention on the most relevant information, facilitating the data preparation process without compromising the transparency and robustness of sustainability reporting.			
Survey	Impronta Etica	NGO	Italy	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Impronta Etica	NGO	Italy	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	Impronta Etica agrees with EFRAG's proposal regarding the reduction of mandatory datapoints. The Association considers that the adopted approach, based on strengthening the materiality filter of information, represents a fair balance between reducing reporting burdens for companies and maintaining the essential information needed to achieve the European Union Green Deal objectives. This change allows companies to move away from a mechanical, checklist-based approach focused solely on providing the requested information, and to concentrate more on the relevance of information and a truthful representation of their organization, ensuring that reporting documents are more meaningful and useful for stakeholders. It is noted that, in this case as well, it is considered useful for EFRAG to provide practical implementation support tools, to accompany this simplification without risking the production of reporting that is partial, approximate, or of low-quality information. Despite the necessary reduction introduced, it remains important that companies understand how to select relevant information in a robust manner and with the appropriate level of granularity.			
Survey	Impronta Etica	NGO	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Impronta Etica agrees with the intention to consider the ESRS as a "fair presentation" framework, aimed at ensuring greater accountability of companies towards strategic reporting that goes beyond mere compliance. However, the Association does not consider this explicit statement a significant change for sustainability reporting compared to previous provisions. It is considered that the real push towards more effective and relevant reporting must be accompanied by the strengthening of the double materiality process and by a greater emphasis in the ESRS on the relevance of the information disclosed in the sustainability report, which should also include entity-specific information for relevant topics, based on those provided in existing sectoral standards. In essence, the explicit introduction of the "fair presentation" principle, while consistent with this approach, does not add substantial value or significant novelty unless it is accompanied by the measures outlined above.			
Survey	University of Padova	Academia	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	The proposed amendments do not achieve acceptable balance between simplification and robustness . While point (a) in the definition of double materiality is clear, point (b) is imprecise and tautological: "Information is MATERIAL when: (…) it is necessary (…) to understand (…) MATERIAL impacts, risks and opportunities …" (emphasis added) The inclusion of "risks and opportunities" is inconsistent with the notion of impact materiality, as illustrated in ESRS 1 (e.g., para 3 and 30). Point (b) refers to the "understanding" of sustainability reporting users, without considering implications of such understanding. in para 30 impact materiality refers to "the identification of information that relates to the undertaking's material actual or potential, positive or negative impacts on people or the environment (…) direct contractual relationships." any framing of impact materiality based on decision-making is insufficient, since many of the stakeholders are not in a position to make any decision (e.g., nature or future generations). if the "understanding" and the "decision-making" framings of impact materiality are unsuitable, a possible framing for point (b) could be based on the notion of stewardship and due diligence. Suggested alternative wording: "(b) it is necessary for the corporation to show to a broad range of stakeholders that it identifies and addresses actual or potential, positive or negative impacts on people or the environment" The focus on he "materiality of information" as a general filter (point 2) can help organisations performing DMA, however, the assessment of materiality of information shall not be used as a reason to omit information on a topic that was identified as material. The possibility allowed by point 6 breaks the traceability between impacts, risks, opportunities, and corresponding metrics, complicating insurability and cross-sectional comparability. Allowing the disclosure of information on non-material topics (para 108) may introduce noise and allow cherry-picking practices biasing "fair presentation".			
Survey	University of Padova	Academia	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree

Survey	University of Padova	Academia	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	University of Padova	Academia	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	The simplification of ESRSs and the reduction of disclosure requirement and data points is premature. Companies, auditors and consultants have already invested in the implementation of ESRSs. However, the untimely revision will waste the learning that could be obtained from this experience. No less important, in general, the loss of the knowledge and positive externalities generated by the preparation, analysis and use of sustainability information and the increase in social and environmental regulation costs (e.g., government monitoring in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from the ESRS simplification. The re-architecture between ESRS 2 and thematic standards reduces enforceability and comparability because although minimum "Shall" requirements are maintained in ESRS 2, their simplification weakens the common baseline and opens the door to overly flexible interpretations across companies and sectors. The elimination of the obligation to declare PAT plans and timelines diminishes forward-looking guidance and monitoring capabilities. Additionally, this omission limits the capacity of information users to evaluate the commitment of reporting organizations in achieving their stated sustainability goals.			
Survey	University of Padova	Academia	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	University of Padova	Academia	Italy	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is reasonable to include guidelines and examples on how to disclose datapoints in "Non-Mandatory Illustrative Guidance" (NMIG). However, the simplification proposal is depriving users of the sustainability report from crucial information to assess the due diligence of the company. For example, the policies to identify and manage actual or potential, positive or negative impacts on people or the environment, are crucial to assess due diligence. Therefore, it is paramount to perform an in-depth assessment to determine whether all disclosures currently presented in the NMIG should be made mandatory in the delegated act. While the NMIG may reduce implementation questions, encourage proportional innovation, and ease the burden on PAT narratives when rigid prescriptions fail, it could also reduce comparability. Without a minimum common ground, methodological heterogeneity hinders cross-sectional and time-series analyses. In this regard, the NMIG is useful if it complements—not replaces—a clear regulatory baseline that preserves consistency, traceability, and insurability.			
Survey	University of Padova	Academia	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The "undue cost or effort" principle is aligned with the goal of administrative simplification. However, the articulation of this "relief" in paragraph 89 ESRS1 is so imprecise that it may turn this set of standards into dead letter. The "undue cost or effort" principle risks transforming Directive (EU) 2022/2464 into a voluntary guideline. The limitation of considering resilience in terms of risks places an emphasis on financial materiality, overlooking how an organization's activities may also affect the resilience of the ecosystems in which it operates.			
Survey	University of Padova	Academia	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The amendment is generally reasonable. But the "undue cost or effort" principle is too broad, as indicated in the response to question 19.

Survey	University of Padova	Academia	Italy	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	University of Padova	Academia	Italy	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Thorough information on dependencies is increasingly important to motivate organizations and industries to tackle sustainability challenges. This amendment goes against the tide. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification appears to be proposed on the grounds of avoiding information that may impact corporate reputation, at the expense of resilience.			
Survey	University of Padova	Academia	Italy	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	IFRS and ESRS have different objectives and scope. Alignment with IFRS twists the notion of double materiality with the introduction of materiality as a filter and fair presentation, for example. As a result, ESRS is less aligned with the Green Deal. This greater alignment with the ISSB reduces the interoperability with other relevant sustainability reporting standards that companies have been applying for decades (such as the GRI).			
Survey	University of Padova	Academia	Italy	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree

Survey	University of Padova	Academia	Italy	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	No substantial increase in administrative costs. Datapoints are relevant.			
Survey	University of Padova	Academia	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Datapoints are relevant.

Survey	University of Padova	Academia	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The notion of fair presentation is ambitious. It draws on financial reporting. Some ambition in this area is positive. However, it is inconsistent with the focus on limited assurance. Additionally, the application of fair presentation may dissuade companies from disclosing information on material topics, considering the inherent complexity and incompleteness of sustainability data.			
Survey	University of Padova	Academia	Italy	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Complex estimates are common to all sectors. The financial sector has a disproportionate effect on climate change. Absolute targets are essential for assessing progress on climate change, and banks are no exception in this regard. This exclusion is also at odds with other information on climate change required by financial institutions in other EU regulations (e.g. SFDR) and by banking supervising entities (Basel Pillar III).			
Survey	University of Padova	Academia	Italy	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Thresholds are reasonable			
Survey	University of Padova	Academia	Italy	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Processing information about wages, considering notions such as living wages, is a significant concern for society. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			
Survey	University of Padova	Academia	Italy	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The "consolidation" and reduction of DPs results in a loss of granularity and breaks the traceability necessary for the SFDR to inform investors. Merging eight DPs into a single "HR policy" in ESRS 2 limits the relevance of human rights, erases nuances by stakeholder group, and weakens operational alignment with UNGP/OECD. The single "severe cases" indicator fails to capture typologies, severity, remediation, or geography. Excluding "fatalities" from the scope of the PAI on lost days is a material setback. Investors require explicit visibility into fatalities, rates, and trends. Moving content to ESRS 2 (general) instead of maintaining it in ESRS S1–S4 reduces consistency between IROs and specific metrics and hinders insurability. The supposedly "marginal" reduction in coverage is, in fact, material for time series, benchmarking, and alignment with the SFDR Annex I tables; it increases the risk of cherry-picking and mapping gaps.			
Survey	University of Padova	Academia	Italy	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	AR 26 could be further reviewed to better reflect current developments (e.g., SBTN).			
Survey	University of Padova	Academia	Italy	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Disclosing this information has enormous social benefits in terms of increasing gender equality. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information are minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			
Survey	University of Padova	Academia	Italy	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	This formulation will contribute to damaging SMEs. The increase in government regulation and monitoring costs (in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from this unsophisticated simplification.			
Survey	University of Padova	Academia	Italy	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	University of Padova	Academia	Italy	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Some emission-intensity datapoints have been trimmed. While intensity indicators are valuable to users, the cuts mainly target metrics that can be derived from other reported figures (e.g., emissions relative to revenue or total assets). We advocate preserving at least one sector-relevant intensity indicator, since stakeholders need both absolute and intensity perspectives—aligned with TCFD guidance on Metrics & Targets. On transition plans, we welcome the draft's explicit alignment with EU and international climate objectives.			
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We had a first touchpoint with our auditors on the top down approach to the DMA. It remains unclear what is the evidence needed to be able to top-down de-select some topics and select others as material in case there is disagreement between preparer and auditor on the 'common sense' applied to select and de-select.			
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	Much in favour of the clarifications of the gross approach. The fact that we need to maintain ongoing policies and actions in place to mitigate a potential risk/impact means that this is material, regardless of when the action was implemented. In the net-approach, we will end up with reporting on small matters that may be addressed in one year but not in the next because they are not salient to the business and do not comprise key risk areas for the company/industry. We experienced this in our last DMA (applying the net approach) where minor topics with very little relevance to the business/sector and limited impacts on people and the environment ended up as material. So please do not go to a net approach.

Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Yes, much better with more flexibility. Especially the added provisions around inter-referencing and options to move tables to the appendix are welcome.			
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	In general, yes. A couple of comments, though: 1) Stakeholder engagement DRs are mentioned both in topical S-standards as well as in ESRS 2, so an overlap remains there. 2) Metrics are not mentioned as mandatory in the topical standards - but the rest of PATs are. This creates confusion as to what is mandatory.			
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	In general, yes. However, to reduce the number of datapoints, it seems that EFRAG has combined datapoints that used to be separated into larger datapoints. From a preparer's point of view, this makes it not more but less straightforward, as we now have to separate the datapoints ourselves. Paragraph 5 of ESRS 2 is an example hereof.			
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I would like to skip this question and provide my feedback in Part 3				
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	22.E1.	Comments on deleted datapoints in ESRS E1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	GHG intensity should not be deleted. This can serve as a proxy for ghg efficicncy, and we were planning to pull it from reports for our scope 3 data improvement and use it as a supplier emission factor. If removed from reports, we either have to obtain the number manually or we will have to contact our suppliers. This will put a burden on the suppliers that could have been avoided if everyone included their ghg intensity numbers. Also, it is not a burden to add, because the revenue and the total GHG emissions are already calculated by companies.			
Survey	Ferring Pharmaceuticals	Preparer (non-financial preparing a sustainability report)	Switzerland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal? Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Vereniging Milieudefensie	NGO	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Chapter 3 is clearer and better organised. The improved definition of materiality of information in Section 3.1, namely the replacement of criterion of "significance" with "understandability" of impacts provides better guidance and is aligned with the CSRD and international sustainability due diligence instruments. It also clarifies how the materiality of information interacts with (fundamental) qualitative characteristics of information criteria from Chapter 2, and with the rules concerning aggregation and disaggregation of information (e.g. para 52 on "not obscuring"). Section 3.5. Practical considerations are particularly helpful to avoid unnecessary complexity in materiality assessment. However, Chapter 3 frequently conflates 'topics' with 'impacts, risks and opportunities' ('IROs'). Para 22 is confusing when it says that information may be presented "either at the topical level or at [IRO] level". Such a dichotomy is confusing and incorrect. While topics refer to broad thematic areas, IROs are entity specific. The CSRD, as well as IFRS, TCFD, and TNFD consistently focus on the latter. Overemphasising 'topics' risks leading to generic, boilerplate disclosures that lack relevance and specificity. Chapter 3 would be clearer if it keeps the focus on IROs and plainly explain that depending on their nature and context such IROs may be defined at a general level - often corresponding to topics - and/or that information on their management may be similarly aggregated. This should be clarified also in provisions on entity-specific disclosures in paragraph 23 (and in paragraph 10 in Chapter 1) In Chapter 3.3.2, para 37 fails to mention that the purpose of financial material assessment is to not just to identify materiality information but also determine the material risks and opportunities, as required by the CSRD. In this regard, the risks and opportunities are only mentioned in the middle of para 38, making the text incoherent.

Survey	Vereniging Milieudefensie	NGO	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is useful that Chapter 3 addresses the question of how prevention, mitigation and remedy of impacts shall be considered in materiality assessment, but the rules could be expressed in a more simple and understandable way. Para 34 uses a very complicated language to express a simple idea that actual impacts shall be considered as they occurred during the reporting period, and that their ex-post remediation is not relevant. We welcome and stress the importance of the clarification that the potential impacts which require significant ongoing preventative or mitigation efforts shall be considered gross. Without such clarification, it would be in theory be impossible for companies to report on how they manage such issues. In this regard, it would be helpful to refer to the materiality of information filters to provide companies with further guidance on how to distinguish such significant efforts from common practice and compliance measures. The table provided in Appendix C provides more detailed information, which it would be helpful to integrate directly into the main body to ensure clarity and consistency.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The proposed changes are meaningful. We would like to bring the attention to para 113, which we find hard to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." It is not clear to us what the reference to para 22 is meant to imply. Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management. But it doesn't set any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics and the anticipated sectoral standards which would have provided such metrics will not be adopted, shift the expectations for disclosure of metrics for S topics to entity-specific disclosures. As highlighted by the Danish Institute for Human Rights, a leading National Human Rights Institute on business and human rights and reporting, adding the reference to metrics to disclosure requirements SX-4 on targets would improve consistency between the topical and the cross-cutting standards and acknowledge the common use and disclosure by companies of metrics relevant to their social sustainability impact management and progress. This addition would ensure that preparers better understand the ESRS expectations in this regard, whilst not adding any new obligations or datapoints.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	support the proposed changes. We agree with the removal of 'may disclose' elements, because their status has been causing confusion. However, they do not need to be all removed to NMIG. Where they provide useful examples of disclosures, they could be included directly in the standards as "examples". This is particularly the case for the topics for which the reporting practice is evolving, such as Biodiversity and ecosystems. This would make it easier for first-time preparers to understand what kind of information is likely to be relevant and provide a basis for the standardization of metrics. Having to consult another document, such as NMIG, is adding an unnecessary hurdle. The language and therefore understandability of the standards have been considerably improved, however in ESRS 1 especially there is still much to be done in this regard.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The standards are not clear in terms of what the combined effect of the reliefs is and how the reliefs are meant to interact. Interpreting and applying these reliefs independently of each other open doors to abuse and omitting material information, significant differences in reporting practice. Reporting of metrics is subject to a combination of undue cost and effort and lack of data quality reliefs. But the standards do not put these two reliefs in proper context and do not include any explicit requirement and timeframe for companies to improve the coverage and quality of data. This is exacerbated by the relief which unconditionally allows exclusion of joint operations. If the environmental metrics concerning such operations are material, then the standards should incentivise their eventual disclosure. The undue cost and effort and lack of data quality reliefs already provide sufficient flexibility in this regard. Similarly, there is a lack of coherence among the directions of the reliefs related to financial effects, i.e., information which is essential for understanding of the risks and company's ability to overcome them. The limitation related to the announced investment plans focuses the disclosures on effects which are easier to assess and therefore quantify, yet the standards also propose reliefs that enable omitting quantitative disclosures. We broadly agree with the relief provided in ESRS 1, para 90, which allows for calculation of metrics exclusion of activities that are not significant drivers of the IROs. However, the application of this option must be clarified for specific environmental and social metrics which are standardised in the ESRS. For instance, the GHG Protocol's completeness principle explicitly warns against misapplication of materiality criteria in this regard. Similarly, for S1 workforce metrics, such as characteristics of the employees and non-employees, such exclusions are not appropriate.

Survey	Vereniging Milieudefensie	NGO	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs should clearly require the undertaking to improve the coverage and quality of the data needed to meet ESRS requirements. For the metrics concerning own operations and/or metrics standardised directly in the ESRS, this should be subject to clear time limitation. For other metrics, improvements over the years should be also explicitly required, subject to undue cost and effort relief.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Resigning on this ambition is at odds with the objective of putting sustainability reporting on the same level as financial reporting, the integration of both, and ultimately overcoming the tragedy of horizons. We find Option 1 unnecessarily extensive, and lacking time limitation, but broadly acceptable. We disagree with the assertion made in the question that it "[d]ifferent from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources ". In this regard, the new proposed ESRS include the undue cost and effort relief which seems to account for such a situation. With respect to Option 2, we don't find it justifiable to go beyond the IFRS relief. One of the most strongly voiced arguments from stakeholders who called for simplification of ESRS was that, as a matter of principle, ESRS must be aligned with the IFRS except where CSRD or other EU legislation require otherwise. Abandonment of this principle seriously undermines prospects of building a global baseline which both the EU and the ISSB support, and which is an important part of building a level playing field for the EU companies.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Vereniging Milieudefensie	NGO	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	should not go beyond those set in IFRS. Going further would undermine the objective of setting a global baseline for ESG reporting, which is important for achieving a level playing field for EU companies in a global context. The undue cost and effort relief outlined in ESRS 1, para 87-89, is a powerful relief, which addresses virtually all situations where the undertaking may encounter practical obstacles. Explicit emphasis on fair presentation, combined with the strengthened focus on the use of materiality of information filter, provide companies with an increased flexibility in determining meaningful content of their sustainability statements. It marks a further move away from compliance-based to principle-based approach. However, such changes imply increased responsibility for the undertaking. Implementing further reliefs would undermine this responsibility and open the doors to abuse.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Vereniging Milieudefensie	NGO	Netherlands	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The number of datapoints in each standard represent the minimum necessary to ensure cohesive disclosure requirements, and consequently basic comparability and quality of the actual disclosures. We have not identified any instance where ESRS would include exorbitant requirements, considered common practice and internationally recognised reporting standards and frameworks such as IFRS, GRI, or TNFD. ESRS are generally more concise and less demanding. Introducing further reductions (while keeping the coverage of all ESG factors as required by the CSRD) would create serious quality gaps between the ESRS disclosures and those based on the standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Vereniging Milieudefensie	NGO	Netherlands	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree with these changes, noting that the suggested changes do not add a new burden. This is particularly the case for the water-related metrics. In order to disclose the water consumption, the undertaking already has to calculate withdrawals and discharges, and such calculation and therefore the underlying data is subject to the assurance. Moving these implicit datapoints to the forefront as explicit data points makes the disclosure requirement clearer, compared to the previous ESRS where some of these datapoints were framed as "may disclosures". Whether or not these individual datapoints are to be disclosed is correctly subject to materiality of the information filter applied by the undertaking. We suggest that the obligation to disclose a biodiversity and ecosystems transition plan should be triggered by the identification of material impacts, dependencies, risks, and opportunities on biodiversity, rather than by the pre-existence of such a plan. Otherwise, the change from 'may' to 'shall' would have virtually no effect, as the vast majority of companies currently do not have a biodiversity transition plan in place and would therefore have nothing to report. We recommend clarifying that, where a biodiversity transition plan is disclosed, it should naturally integrate and reference the connections to the material topics covered by the other environmental standards. Biodiversity loss and recovery are also driven by local issues such as pollution (E2), water use and marine resource exploitation (E3), and resource extraction (E5), while circular economy approaches often form part of the solution space. Making this systemic relationship explicit would not introduce new reporting requirements, but could enhance coherence, support a more holistic understanding of impacts and responses, and prevent a siloed or overly narrow interpretation of the scope of a biodiversity transition plan.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree with these changes, noting that the suggested changes do not add a new burden. E2-4 on secondary microplastics is not a new datapoint, as correctly pointed out in the Rationale above. We do not understand why it is included in this question, as such.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	ESRS, being based on the materiality principle, the CSRD requirement to disclose impacts, risks and opportunities and their management, and the general principles of the Accounting Directive, has already been subject to a fair presentation regime. Making it explicit helps to clarify it. It provides companies with clarity on the discretion and judgement, as well as related safeguard, they are expected to exercise when applying the standards.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The global carbon budget is defined in absolute terms. For this reason, it remains essential that also financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements, for understanding the real-world climate impact of financed activities and for understanding the ambition level of financial insti. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Absolute values, by contrast, give a clear signal of whether institutions are aiming for a fair contribution to the necessary 90–95% global reduction in emissions by 2050, with steep cuts by 2030. Both approaches rely on similar underlying data, and estimation challenges are not unique to the financial sector. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new threshold is simpler and clearer, and therefore easier to apply. It also sets a clear cap. Any potential increase of breakdowns of the disclosed information is negligent in terms of added burden.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree				
Survey	Vereniging Milieudefensie	NGO	Netherlands	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We are concerned about the concurrent effect of various reliefs. We are also concerned about the unintended confusion caused by a rather confusing explanation of the relationship between impacts, risks and opportunities on one hand, and sustainability topics on the other.

I partially agree and partially disagree	We do not think that the streamlining of the E1-1 Transition Plan for Climate Change Mitigation added value. If anything, more rather than less details and clarifications are needed. The glossary could retain the definition of net zero targets and related criteria, as use and reporting of such targets is a common practice. We have provided specific comments by paragraph. The 1.5°C alignment shall remain the central and non-negotiable reference for corporate climate targets. Allowing companies to refer alternatively to the EU Climate Law risks undermining scientific robustness and integrity, as it could open the door to selective interpretations and policy developments. Corporations should continue to set five-year targets beyond 2030 to ensure transparency and accountability in their transition pathways, as well as consistent performance measurement and alignment.

Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	We would recommend adding an explicit reference to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, S3 and S4, that is the standards that lack any metrics. In S1, we have strong reservations about the newly suggested methodology for adequate wages outside of the EEA. It would lead to misleading disclosures and add burden for companies.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	We would recommend adding an explicit reference to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, S3 and S4, that is the standards that lack any metrics. In S1, we have strong reservations about the newly suggested methodology for adequate wages outside of the EEA. It would lead to misleading disclosures and add burden for companies.			
Survey	Vereniging Milieudefensie	NGO	Netherlands	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. I agree				
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Proposed revisions to ESRS E3 and E4 aimed at reducing reporting burden risk weakening the environmental integrity of sustainability disclosures. Key environmental aspects may be excluded, notably through the removal of mandatory reporting requirements in ESRS E4 related to the mitigation hierarchy, impacts on endangered species, and areas of vulnerable biodiversity. This could result in the loss of material information essential for assessing environmental performance. Similarly, changes to the definition of "status" under the Water Framework Directive (E3), and the removal of references to "ecological thresholds" in both E3 and E4, may reduce cross-border intercalibration and the use of comparable criteria across EU and EEA countries. This undermines the consistency and reliability of environmental data, which is critical for evaluating impacts, including those related to hydropower production. In addition, the use of Application Requirements (AR) to clarify reporting obligations is inconsistent. ARs are alternately used to explain how a requirement can be fulfilled, provide examples, or add interpretive guidance. In some cases, there is content overlap between the main disclosure requirement and its associated AR. For clarity and usability, all essential information—including alternative ways to meet the requirement—should be integrated directly into the disclosure paragraph.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	EFRAG recommends that the Commission does not incorporate this content into the delegated act. The Norwegian Environment Agency supports EFRAG's assessment. Furthermore, we believe that references to NMIG should be excluded from the reporting standards to avoid unnecessary confusion regarding additional reporting requirements or expectations beyond what is stated in the ESRSs. It must be made explicitly clear that NMIG is a historical reference document—not a voluntary supplementary standard. In our view, this distinction is essential to ensure clarity and prevent misinterpretation in the implementation of the ESRS framework.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	ESRS 1 introduces several reporting "reliefs." While some are reasonable—linked to what is material for understanding impacts, risks, and opportunities (IRO)—others allow companies to self-assess the availability of data or the cost of obtaining it. This opens the door for companies to opt out of reporting on the grounds that data is too difficult or expensive to collect. Additionally, companies may now estimate unavailable data or use proxies. While this may ease short-term reporting burdens, it risks discouraging companies from investing in systems and processes to generate reliable data. Over time, this could reduce the quality and consistency of sustainability disclosures. It must be clearly stated that material information must be reported, regardless of perceived difficulty or cost. The proposed reliefs should be reviewed to ensure they do not compromise the integrity of reporting. Excessive flexibility may result in incomplete or inconsistent disclosures, undermining the "fair presentation" principle and making it harder to compare data across companies and over time. Robust, comparable, and decision-useful sustainability information is essential for stakeholders, including regulators, investors, and civil society. We urge a careful reassessment of the proposed reliefs to safeguard the credibility of the ESRS framework.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	Companies may now estimate unavailable data or use proxies. While this may ease short-term reporting burdens, it risks discouraging companies from investing in systems and processes to generate reliable data. Over time, this could reduce the quality and consistency of sustainability disclosures.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Additionally, companies may now estimate unavailable data or use proxies. While this may ease short-term reporting burdens, it risks discouraging companies from investing in systems and processes to generate reliable data. Over time, this could reduce the quality and consistency of sustainability disclosures.

Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The inclusion of IFRS-based reliefs—"undue cost and effort" and "reasonable and supportable information"—in the proposed ESRS revisions aims to improve interoperability. These allow companies to use estimates or proxies when collecting specific data is disproportionately costly or burdensome. Furthermore, companies are only expected to use reasonably available information that can be supported by documentation, rather than striving for complete or "perfect" datasets where reliable sources are lacking. While alignment with the ISSB framework may offer positive synergies for businesses, and increased use of the materiality principle can foster greater ownership of reporting, we are concerned that these reliefs may undermine the consistency and transparency of sustainability disclosures. Allowing companies to self-assess what is "too difficult" or "too expensive" introduces subjectivity and may incentivize minimal compliance rather than robust data collection. Over time, this could erode the reliability of reported information and reduce comparability across companies and jurisdictions. We recommend a careful reassessment of these reliefs to ensure they do not compromise the integrity of sustainability reporting. Material information must be disclosed, even if data collection requires effort. Safeguards should be introduced to prevent misuse and ensure that reliefs are applied only in justified, well-documented cases.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	22.E1.	Comments on deleted datapoints in ESRS E1	I partially agree and partially disagree	The Norwegian Environment Agency considers some of the proposed changes appropriate, while others may weaken the environmental integrity of reporting and reduce comparability across companies. The removal of the requirement to report a baseline year is one example that could negatively affect the ability to compare emissions data over time and across entities. We also note several changes—particularly regarding transition plans—that may lower the quality of corporate climate strategies. It is essential that Level 1 regulation(CSRD) includes a clear definition of what constitutes 1.5°C compatibility in a transition plan. Stakeholder feedback highlights the need for more guidance on assessing risks related to locked-in GHG emissions. We recommend considering the inclusion of OECD guidance (e.g., in AR 3 for paragraph 14) to strengthen the qualitative dimension of this assessment. The direct reference to the EU Taxonomy has been proposed for removal from ESRS E1. While we understand the rationale, we emphasize that the taxonomy defines what is considered environmentally sustainable. A credible transition plan should be aligned with these criteria. Removing this link may reduce the quality of corporate transition efforts. E1-4 (new E1-6): Targets related to climate change Paragraphs 36(c) and (d)—now paragraph 26—previously required reporting on base year and baseline value, updating the base year every five years after 2030, and setting emission reduction targets for at least 2030 (and preferably 2050). These requirements now appear to be removed to increase flexibility. However, this change may reduce the ability to assess whether emission reductions are real and comparable across companies. In order to compare data, the base year should continue to be updated every 5th year.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	22.E2.	Comments on deleted datapoints in ESRS E2	I partially agree and partially disagree	Clarification of substance-related reporting requirements It has been clarified that requirements related to substances, whether alone or in mixtures, apply specifically to the chemical sector. The reporting obligations have been significantly eased for companies that only use chemicals, with stricter requirements applying to manufacturers and importers. Only manufacturers and importers are required to report on both SVHC (Substances of Very High Concern) and SoC (Substances of Concern), while users are only required to report on SVHC. However, we note that the clarification under AR 6 for paragraph 18 does not align with which entities paragraph 18 is intended to apply to. Reporting requirements for the purchase and sale of articles containing SVHC have been separated out, referencing the 0.1% concentration threshold in REACH Article 33. These requirements apply to manufacturers, importers, and users of such articles. We question whether it is appropriate for this requirement to include companies that are merely users of articles containing SVHC. If the intention is to target companies assembling components into complex products, this should be made more explicit.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	22.E3.	Comments on deleted datapoints in ESRS E3	I partially agree and partially disagree	All references to water status under the Water Framework Directive (WFD) have been removed from the ESRS documents, justified by simplification and coverage in other sources. Previously, Application Requirements (AR 5–7) guided companies to assess environmental status and water risks from a catchment perspective, ensuring upstream/downstream effects were considered. These provisions are now generalized due to the exclusion of IRO from the topical standards. We recommend retaining water status as a specific metric, alongside the thresholds used to define targets. The WFD method is intercalibrated across EU/EEA countries and provides comparable criteria. Water status reflects the condition of aquatic ecosystems and is essential for assessing companies' environmental footprint. Metrics and Target E3-3 paragraph 24, which required companies to disclose ecological thresholds and methodologies, has been deleted and replaced by ESRS 2 §43(g). The new text asks whether targets are based on scientific evidence and how thresholds are considered, but lacks detail on boundaries or methods. Although the removal of "may" implies stricter expectations, the new formulation does not ensure comparability across entities. We propose reinstating the original paragraph to maintain clarity and consistency. For hydropower production, it is crucial to assess whether affected water bodies can meet WFD objectives for good ecological status or potential. While parameters like water abstraction are relevant, they are not sufficient. Achieving minimum ecosystem function and ecological continuity (e.g., migration) is key. The removal of references to water status weakens the ability to evaluate whether WFD goals are met, including cases with less stringent objectives under Article 4.5.

Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	22.E4.	Comments on deleted datapoints in ESRS E4	I partially agree and partially disagree	EFRAG proposes making the requirement for a "transition plan for biodiversity and ecosystems" mandatory, provided the undertaking has already developed such a plan. We support the proposal but recommend strengthening it by removing the conditionality. Limiting the requirement to entities with existing plans will not ensure access to standardized information. All relevant entities should be required to develop transition plans. Changes that may weaken environmental integrity Several previously mandatory disclosures in ESRS E4 have been removed. Eliminating key topics such as the mitigation hierarchy and impacts on endangered species may result in the loss of material information. These elements should remain mandatory. The removal of paragraph E4-4 §32(a) on ecological thresholds and its replacement with a general reference in ESRS 2 §43(g) does not ensure comparability across entities. We recommend retaining the original specification, including identification of thresholds, methodology, entity-specific considerations, and allocation of responsibility. Paragraph E4-4 §32(b), which required alignment of targets with the Kunming-Montreal Global Biodiversity Framework, the EU Biodiversity Strategy for 2030, and national policies, is also proposed for deletion. We consider this alignment important and not overly burdensome. The revised E4-5 §20 appears to omit key elements necessary for effective reporting. It should retain: Identification of specific activities impacting areas of vulnerable biodiversity Breakdown by impact, dependency, and ecological condition (including reference values) Information to identify responsible authorities While moving this content to the "metrics" section may be appropriate, the level of detail must be preserved to ensure meaningful biodiversity impact assessments.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	Paragraph E4-4 §32(b), which required alignment of targets with the Kunming-Montreal Global Biodiversity Framework, the EU Biodiversity Strategy for 2030, and national policies, is also proposed for deletion. We consider this alignment important and not overly burdensome.			
Survey	Norwegian Environmental Protection Agency	National supervisory authority & regulator	Norway	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree					
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree					
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	NMIG can play an important role in supporting consistent implementation of ESRS by providing methodological guidance and examples without embedding such content in the Delegated Act. Given that methods and external references evolve rapidly, it is sensible to keep this material outside of binding legislation, allowing for timely updates. At the same time, shifting from prescriptive datapoints to non-mandatory guidance requires a higher level of professional judgment and trust across the reporting ecosystem. Companies will need to explain the reasoning behind their disclosures, auditors will need to assess quality and relevance beyond formal box-ticking, and investors will need to interpret reports with greater discernment. In this sense, NMIG will serve as a test of maturity: its value lies less in providing definitive answers and more in enabling transparent, well-reasoned reporting decisions.			
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	Yes, I agree that the proposed amendments strike a good balance between burden relief and preserving transparency. The revised paragraphs 46–48, AR 19 and paragraph 65 in ESRS 1 are particularly important improvements. First, there is now a clear acknowledgement that resources are limited and that effective materiality assessment does not require mapping every possible impact across the entire value chain. Using reasonably available and business-relevant information – such as that already applied in strategy, risk management or due diligence – is sufficient. Starting with the most obvious topics, and then handling potential areas step by step with targeted analysis, is a pragmatic and intelligent process logic. It reduces administrative burden and shifts the focus to substance. Second, the clarification in AR 19 that quantitative scoring is not required in all cases is crucial. In many situations, a well-reasoned qualitative analysis is enough to conclude on materiality. This avoids unnecessary numerical scoring of issues where materiality is already evident, leading to more efficient and meaningful reporting. Third, paragraph 65 provides a realistic approach to value chain analysis. Allowing companies to rely on average, regional or sectoral information aligns with how hotspot analyses are already used in practice. Direct data should only be sought when risks are unclear and potentially significant. This creates a useful process structure: start broad with available data, prioritise likely and severe impacts, and go deeper only where necessary.			
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree					
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	I support Option 1. It offers the right balance between flexibility and accountability. Allowing companies to omit quantitative information under defined conditions recognises practical limitations, while still requiring transparency on the reasoning behind disclosures. This aligns with the overall direction of the amended ESRS: moving from exhaustive datapoint collection towards professional judgment, risk-based prioritisation, and the use of reasonable and supportable information. Option 2 would reduce comparability and risk undermining investor confidence, as it makes quantitative reporting entirely voluntary. By contrast, Option 1 maintains alignment with IFRS S1/S2 while ensuring that qualitative assessments can stand on their own where materiality is already clear, thus focusing efforts where they add most value.			
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3

Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	It is reasonable that these six datapoints have been made mandatory, as they cover areas where: Relevance is already established – water use (withdrawals and discharges) are fundamental indicators of resource consumption and local environmental impacts. Companies generally already have the data to report them, and they are essential for understanding the water balance and related risks. Decision-usefulness is high – a transition plan for biodiversity and ecosystems is considered central by users to assess how companies manage nature-related risks. The trend is clear: markets and policy developments increasingly expect such plans to exist and become standardised. Governance and accountability – datapoints on procurement team training and confirmed corruption incidents are directly linked to governance and compliance. They are important to show whether companies build capacity where risks are highest (e.g. in supply chains) and to provide a quantitative basis for tracking anti-corruption efforts. Overall, the change means that certain disclosures, which were already strongly expected, are now minimum requirements. This strengthens comparability and prevents companies from omitting critical datapoints out of convenience. At the same time, the selected datapoints are pragmatic: most companies already have the data or processes needed to report.			
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	I disagree that financial institutions should be exempted from disclosing absolute GHG emission reduction targets when they have only set intensity targets. While it is true that calculating absolute targets for portfolios requires multiple assumptions, complex estimations are common to all sectors and should not be a reason for exemption. Intensity targets capture efficiency improvements but may conceal rising total emissions, whereas absolute targets provide clarity on the overall climate impact. Both perspectives are necessary for a fair understanding of progress. Granting an exception only to financial institutions would create an unlevel playing field compared to other sectors. Given the central role of banks, insurers and asset managers in directing capital towards transition, maintaining transparency through both intensity and absolute targets is crucial for accountability and comparability.			
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree

Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	I agree with the approach taken to integrate the SFDR PAI datapoints into the Amended ESRS. The revisions strike a sensible balance between reducing duplication and maintaining alignment with SFDR requirements. On the environmental side, removing datapoints that are outside ESRS scope, such as the indicator on marine resources, is a pragmatic choice. On the social side, consolidating multiple datapoints into a unified "human rights policy" and merging indicators on severe human rights cases increases clarity and reduces fragmentation. Importantly, while the overall number of datapoints has been reduced, the coverage of SFDR PAI has only been marginally affected, and the relevance and usability of the information has been strengthened. This ensures that preparers face less administrative burden while investors and other users still receive the information necessary to fulfil SFDR objectives. Overall, the amendments improve interoperability between SFDR and ESRS and enhance the consistency of sustainability reporting across frameworks. This is a well-balanced step: fewer datapoints, but with clearer structure and higher decision-usefulness.			
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	It is understandable why EFRAG has decided to delete AR 26 and the detailed examples of measurable biodiversity targets (e.g., habitat areas protected, restored areas, projects improving ecological integrity). The concern that such examples may quickly become outdated is valid, and shifting methodological guidance outside the Delegated Act is consistent with the overall simplification approach: binding requirements should focus on principles and datapoints, while methodological advice can be updated more flexibly elsewhere. However, there is a risk. For many companies, especially those without strong ecological expertise, concrete examples provide essential clarity and lower the threshold for setting meaningful targets. Without such guidance, reporting risks becoming too abstract and less comparable. A balanced way forward would be to ensure that methodological support – including examples of targets and indicators – is developed and published in parallel, for instance in NMIG or in a dedicated guidance document linked to ESRS E4. This would allow the legal requirements to remain stable, while providing preparers with practical and regularly updated tools. In summary, removing AR 26 can strengthen the long-term robustness of the standards, but only if it is accompanied by accessible, up-to-date guidance for companies.			
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	IVL Swedish Environmental Institute	Consultant (including software vendor)	Sweden	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	The amendments sufficiently simplify the DMA, reinforce the materiality filter, and strike an acceptable balance. The wording of Chapter 3 of ESRS 1 is clearer and easier to apply. The simplification reduces administrative complexity and should limit unnecessary disclosures while still meeting user needs.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The new guidelines provide useful clarification, but it is important that considering remediation, mitigation, and prevention should not require extensive new evidence gathering. Furthermore, the question of gross vs net impact remains variable dependent on the individual company.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The amendments provide flexibility that supports more concise reporting and better integration with other corporate reporting. This reduces duplication, granularity, and unnecessary disclosures, thereby limiting the reporting burden.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	The amendments strike an appropriate balance. The reduced prescriptiveness is welcome, as it lowers preparation effort. Changes to PAT are welcome. This should not be counteracted by future interpretative guidance that reintroduces complexity.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	The amendments improve clarity and accessibility. Clearer and less prescriptive requirements reduce the need for costly interpretation and specialist resources, thereby limiting reporting obligations.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	NMIG is useful when applied voluntarily, but it should remain clearly outside the mandatory framework. This ensures examples are available for reference without adding de facto reporting obligations.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	The burden reliefs are a positive step and the balance struck is acceptable. The changes reduce costs for preparers while still allowing stakeholders to receive core sustainability information.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Allowing proxies and estimates where data quality is lacking is essential. This provides necessary flexibility, avoids costly data collection exercises, and reduces the risk of delay or excessive effort.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Qualitative disclosures on anticipated financial effects significantly reduce the burden compared to mandatory quantitative assessments, which are highly resource-intensive and speculative. The relief should remain in place and quantification left voluntary.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	The amended paragraphs 40–42 strike a workable balance. The disclosures meet user needs without requiring complex modelling. This simplification avoids excessive effort , but it may be difficult to provide meaningful information as the methodology can still be vague.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	The amendments improve interoperability with IFRS S1/S2 while also supporting simplification. This reduces duplication of effort for companies reporting under multiple frameworks, which is critical for lowering the reporting burden.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	The reduction in mandatory datapoints is a major improvement, cutting unnecessary effort while preserving key disclosures. The balance is appropriate, though further reductions could be considered in the future if uptake shows immaterial information is still reported.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	22.E1.	Comments on deleted datapoints in ESRS E1	I agree	The reduction in mandatory datapoints is a major improvement, cutting unnecessary effort while preserving key disclosures. The balance is appropriate, though further reductions could be considered in the future if uptake shows immaterial information is still reported.

The balance is appropriate, though further reductions could be considered in the future if uptake shows immaterial information is still reported.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	22.G1	Comments on deleted datapoints in ESRS G1	I agree	The reduction in mandatory datapoints is a major improvement, cutting unnecessary effort while preserving key disclosures. The balance is appropriate, though further reductions could be considered in the future if uptake shows immaterial information is still reported.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The six datapoints moved from "may" to "shall" may be important, but each new mandatory requirement increases reporting obligations. Their inclusion should be reviewed carefully, and implementation timelines should allow sufficient flexibility. In particular, mandating biodiversity transition plans, even if conditional, can add a layer of complexity and ambiguity due to a lack of well defined procedures.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The four new mandatory datapoints address relevant issues, but they add to reporting burden. In particular, information on materials with unknown final destinations may be impractical to collect. These should either be phased in gradually or left as voluntary disclosures.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	While fair presentation is an important principle, explicitly requiring it could create expectations for additional information beyond what is already mandated, increasing reporting effort. Any obligation should be narrowly defined to prevent excessive disclosures.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 (“when only setting intensity targets”), to disclose also the associated absolute values” (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking’s progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Complex estimates are common to all sectors, and there is not a plausible rationale to explicitly exclude financial institutions from disclosing climate absolute GHG emissions values targets when they have only set intensity targets. Both information types are needed for a proper understanding of the undertaking’s progress as well.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking’s employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	Any threshold change that could trigger an increase in the number of countries to report on should be approached with caution. However, it remains unclear to what extent this change could impact reporting burdens.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	The revised methodology for non-EU adequate wages is more practical and reduces reliance on unavailable or unreliable local data sources. This improves feasibility and lowers the effort required for compliance. Removal of reference to the transposition period is also welcome.

Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	While consolidating SFDR datapoints in ESRS 2 improves traceability, it still imposes additional requirements linked to other EU frameworks. Simplification should focus on limiting duplication and only requiring datapoints that are material, to avoid unnecessary reporting.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	AR 26 should be reviewed to avoid overly prescriptive disclosures on biodiversity targets. Suggested wording: "Undertakings may, where relevant, describe biodiversity and ecosystem targets, including scope, baseline, and timeframe." It would also be preferable to make the relevant methodology more concrete as biodiversity is still a relatively vague topic to report on.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	Deleting the voluntary adjusted gender pay gap datapoint is appropriate. It removes unnecessary burden while still requiring the unadjusted metric, which ensures comparability across entities without additional calculations.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	The replacement formulation is sufficient to protect SMEs. It reduces cascading data requests and avoids imposing disproportionate obligations on smaller companies in the value chain, supporting proportionality and lowering reporting costs overall.			
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. I agree				
Survey	Samsung Electronics	Preparer (non-financial preparing a sustainability report)	South Korea	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		General comments: - Strongly recommend EFRAG to maintain in its technical guidance to the EC the need for alignment between financial & non-financial reporting. If a company's group-level financial report does not include its subs, it should be replicated under sustainability reporting too. Financial holding-only parent companies should be exempted from consolidation. Although Level 1 element, EFRAG could well pass that recommendation to the EC. - DMA: Integrating actual/potential impacts is more efficient, reduces complexity in assessment/reporting. Also, from global company perspective, standardization with international frameworks e.g., ISSB is essential. Multiple frameworks create duplication/burden. Global consistency should be maintained. From global investor's perspective, consistent data aligned with international standards is important, as they conduct comparative analyses incl. companies outside the EU. Furthermore, a summary of DMA key processes & conclusions should suffice. Providing a detailed process & methodology for identifying, assessing, prioritizing impacts, as in the past, would be highly burdensome & impractical. - Financial effects disclosures: Guidelines are needed to avoid disclosure of commercially sensitive information. - Social metrics granularity: Mandatory should be the core metrics (employee status, safety, diversity) and the rest voluntary. Also, need for alignment of sustainability reporting with existing regulations is crucial to avoid duplication, and the preferred approach is group-level reporting as the default approach, whereas country-level would be opted only for high-risk regions. - Environmental reporting: EU-level common guidance is needed. On how to handle secondary microplastics & critical raw materials reporting, this should start with qualitative and expand to quantitative overtime. - Phased-in approach for disclosures: We support this as it allows time for preparation & adaptation. - Data quality & assurance: A minimum of three years is necessary for companies to prepare their reports & assurance, and EU guidelines should clearly define the limits on auditors' documentation demands.

Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the efforts made to simplify chapter 3 of ESRS 1. However, although practical considerations have been introduced, the section dedicated to the DMA still remains complex and burdensome. We find useful the introduction of the concept that "the undertaking is not required to assess every possible impact, risk and opportunity across all areas of its operations and throughout the upstream and downstream value chains to identify the topics", and we support the use of the notion of "reasonable and supportable information that is available without undue cost and effort". The following specification is also useful: "the materiality assessment regarding upstream and downstream value chain may be conducted without direct information from counterparts, using average regional or sectoral data or generally available information about the incidence of impacts, risks and opportunities in the given context". We also support further elements of simplification such as the possibility to not consider all time horizons or each individual assessment variable and the possibility of using qualitative rather than exclusively quantitative considerations in the materiality assessment.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	We believe that considering the assessment of "gross" impacts makes the outcome of the DMA less meaningful, contrary to the rationale for which this concept was introduced (as expressed in the Basis for Conclusions). In our view, the most appropriate solution is a "net" assessment of mitigation measures, since a more flexible approach is required. Moreover, we propose removing the Appendix C Table, as it represents an Application Requirement that is neither clear nor fully consistent with the other specific requirements, and therefore creates confusion. We also deem necessary clarifying the approach to risk assessment, in order to ensure connectivity with the risk disclosures already provided in the financial statements.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We appreciate the greater flexibility ensured by the new set of revised principles, particularly in terms of streamlining of the structure of the document, which has positive effects on clarity and conciseness. However, we believe that further improvements are necessary to enable companies to ensure connectivity within the overall set of financial statements.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We welcome the simplification of PATs and the main changes proposed. Nonetheless, ESRS 1 Paragraph 84(c) requires adjusting the base year of the target following major acquisitions or disposals, and this is inconsistent with the integration of investments or divestments in the business strategy to achieve the target. Moreover, regarding ESRS 2 AR 35, the disclosure on resources allocation (in particular, capital expenditure and operating expenditure) should be changed to "may".			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We appreciate the improvements made. However, we believe it would be useful to clarify what is mandatory, in order to avoid confusion and potential issues also with auditors. For instance, more clarity could be achieved by removing expressions that leave room for interpretation or discretion, such as "shall consider".			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We agree with EFRAG's recommendation that the NMIG guidelines should be excluded from the Delegated Act. The NMIG guidelines should be published instead as EFRAG guidelines, in order to avoid creating confusion with the mandatory content. In particular, to ensure that such guidelines are correctly interpreted as non-mandatory, they could clearly state that: i) their non-binding character remains clearly communicated and consistently understood by preparers and auditors; and ii) they cannot be used for audit purposes, which would be supported by their exclusion from the Delegated Act.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Reliefs are essential, and this one in particular helps ensure that the data collected for reporting purposes are reliable and based on sound foundations, thereby supporting the quality of reporting and limiting potential negative effects (both legal and reputational) associated with the disclosure of unreliable data. Such reliefs may also be helpful in terms of engagement in the development and implementation of suitable methodologies to overcome the issue.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We deem necessary allowing preparers to provide voluntary disclosure, both quantitative and qualitative. We do not support Option 1, since we do not agree with the mandatory inclusion of financial and forward-looking information that is not contained in the financial statements. Such information would need to be prepared without the necessary maturity, including in terms of methodologies, and would be subject to a high degree of uncertainty, with potential reputational and even legal risks. If the requirement were to be maintained, we believe it should be limited to qualitative information.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Change 1: In general, we consider essential ensuring alignment between different regulatory frameworks regulating the same matter. However, a case-by-case assessment of individual alignment proposals is necessary, as interoperability is not always applicable. This is primarily because the IFRS S refer to financial materiality (and not impact materiality) and to a single topic. We do not agree with alignment on fair presentation and anticipated financial effects. Change 3: With regard to the scope of application of E1 requirements on GHG emissions, greater flexibility is needed and there should be no obligation to follow the financial consolidation perimeter. Change 6: We support the option to include "may consider".			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	From a simplification perspective, extending the requirement on the disaggregation of "total energy consumption from fossil fuels" to all companies appears to be an additional burden that is not properly justified. We support limiting the requirement to high climate-impact companies, as is currently the case.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	We do not agree with the introduction of fair presentation (replacing the compliance-based approach) because: (i) it is either not applicable or not definable considering the scope of sustainability reporting (impact materiality and multi-stakeholder approach) compared to the scope of financial reporting (financial materiality); (ii) It entails a significant increase in the responsibilities of the Board (and the Executive Officer in charge) and a correspondingly high reputational and legal risk. Ensuring completeness of disclosure for all relevant stakeholders entails a potentially infinite scope of information and does not add value in terms of comparability and/or materiality of the disclosure. As an alternative to removing fair presentation, a specific definition could be considered, different from the IFRS S definition but suitable and applicable to sustainability reporting. It would also be desirable for this principle not to apply to data and information that are not under the direct control of the organisation, such as value chain data and estimated data.

Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	For financial institutions, the absolute value of GHG emissions is neither useful nor meaningful information; it does not provide added value to the reader compared with a figure expressed in terms of intensity, which is better suited for comparability. Moreover, up to now financial institutions have not been required to disclose the absolute value of GHG emissions and our ESG Plan is therefore based on intensity-based GHG values. If the exemption was removed, this would amount to a new requirement for financial institutions, implying additional efforts. As such, this would run against the logic of reducing burdens and simplifying requirements.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	This provision entails an additional burden for those companies that must report the number of employees and the gender breakdown even for countries that are not necessarily material.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	AR 26 requires companies to disclose information on biodiversity impacts at a localised level, particularly for activities near protected areas or areas with high nature value. Not all companies have detailed data on habitats, species, or sensitive areas. Collecting precise information (by site, geographic coordinates, type of impact) can be extremely burdensome. Therefore, AR 26 should be accompanied by clearer guidelines, practical examples, or a phased approach based on risk or materiality.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	The unadjusted gender pay gap is not a representative indicator; therefore, it may be appropriate to replace this metric with the gender pay gap broken down by employee category. It would also be necessary to exclude from the calculation the role of General Manager if it coincides with the role of Chief Executive Officer. Indeed, although the General Manager is an employee, their status is inextricably linked to that of the CEO. For this reason, hiring and remuneration policies are not levers available to the company but are defined and approved by the Board of Directors. The calculation should be based on the annual pay level rather than the average gross hourly pay. Concerning the variable components of remuneration: •It is unclear which methodology should be used to measure them, i.e., whether to use the cash flow of the reporting period (which therefore refers to the previous period, and is affected by the pro-rata mechanism for bonuses of newly hired employees) or the forecasted amount (referring to the cost accrued in the reporting period, and therefore an estimate rather than an actual value). We consider cash flow to be the most representative value. •the "economic value" of benefits is not always easily and accurately calculable, since some benefits are available only to certain employees and can be used arbitrarily (e.g., family with children, mortgage coverage, etc.). We therefore recommend clarifying that the calculation should be based on the fixed component of remuneration only, while still maintaining other KPIs on the "accessibility" of benefits and the "coverage" of variable components.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	We do not agree with the inclusion of the concept of fair presentation, nor with the gross approach. The definition of the value chain remains vague and undefined for financial institutions. The relief provided in paragraph 72 on acquisitions and disposals is partially undermined by paragraph 73, which introduces a degree of discretionality, such as the definition of a "significant event", and therefore still requires an assessment. We propose eliminating paragraph 73. We do not agree with the provision to consider entity-specific disclosure as mandatory (ESRS 1 paragraphs 10-11 and AR 1-2), since it is not governed by any ESRS. From a simplification perspective, we consider such disclosure should be voluntary, since: i) the flexibility and level of discretionality regarding both the origin of the topic (DMA) and its content (absence of specific provisions and references to other frameworks such as GRI or IFRS sectoral guidance); ii) the lack of comparability between different undertakings, particularly in relation to fair presentation; and iii) the opportunity for disclosure is subject to management assessment.

I disagree	We consider that disclosure on AFE should be removed, as preparers are not ready to develop and implement methodologies capable of providing sufficiently reliable forward-looking data, which is often commercially and strategically sensitive. The requirement would result in disclosure of non-material data that is not useful to investors.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	We do not agree with the removal of the term "severe" as a driver for incident reporting (S1 paragraph 46 (b)), as it runs counter to simplification. Regarding the gender pay gap (S1 DR15), we consider important clarifying that the calculation should be based on the fixed component of remuneration only, while still maintaining other KPIs on the "accessibility" of benefits and the "coverage" of variable components, due to the negative effects of the latter on the KPI calculation.			
Survey	Cassa Depositi e Prestiti (CDP)	Asset manager/Investor	Italy	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We recommend providing specific guidance for financial sector participants, on topics such as the calculation of Scope 3 GHG emissions and the definition of the value chain. Regarding the value chain, given the complexity of data collection and the certainty of its reliability, at this stage it would be appropriate to limit the related reporting requirements. Regarding E1-7 paragraph 28 (b), this requires a more precise definition of the methodology for calculating energy consumption from nuclear sources.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	France Assureurs commends EFRAG's significant efforts to simplify the DMA process and strengthen the materiality filter to only report on the most relevant topics. We welcome the following changes: -The top-down approach for the DMA to avoid unnecessary complexity. -The clarification of the relationship between IROs and topics to be reported. -The option to disclose at topical or IRO level to reflect how material matters are managed in practice. -The report of non-material topics if they are presented in a way that avoids obscuring material information However, we would like to stress the following points: -The simplification of the DMA could be reflected in the report. IRO-1-related disclosures could be reduced and simplified as they require very detailed and complex information for general users. -For simplification purposes, it should be clearly stated that if the undertaking has not experienced significant changes in terms of strategy or commercial position, its DMA does not have to be updated every year. -ESRS1§40(c) defines that material risks and opportunities may arise from changes in regulation addressing systemic risks. This requirement was not part of ESRS Set 1 and could lead to an extensive interpretation and include topics in the DMA that are not relevant to a sustainability report. -Prioritisation is more important than thresholds (that should only help determine and prioritise material topics). The severity assessment should not necessarily lead to scoring each characteristic separately but may be linked to threshold-based prioritisation (AR 5, AR 7) -Some paragraphs remain ambiguous or inconsistent between the bottom-up and top-down approaches, including: specify that the material assessment "shall be assessed based on [criteria]"(§31-32); "Scenarios/forecasts that are deemed likely assessed more likely than not to materialise, including based on conclusive scientific evidence" to assess risks and opportunities (AR 15)			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The current wording is overly complex and is therefore likely to give rise to divergent interpretations. Indeed, the net assessment proposed by EFRAG entails significant risks to comparability and is additionally very complex, which illustrates the insurmountable challenges of determining, through generalized provisions, when a net approach would be appropriate. Therefore, and to preserve comparability, we request that the gross approach be applied (to be reflected in paragraphs 34 to 36) and would support an additional, optional net assessment, provided that the gross approach is established as the mandatory baseline. Remediation and prevention measures would still be transparently captured under the Policies, Actions, and Targets (PAT) disclosures, thereby preserving fair presentation without compromising clarity, auditability, or comparability. Furthermore, we believe Appendix C creates confusion for preparers and we recommend removing it.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	France Assureurs welcomes the possibility of including an executive summary, as well as the emphasis on the use of appendices to separate more detailed or technical information, such as the disclosures related to the UE Taxonomy. This will improve the readability, the relevance and conciseness in the main body of the report. We also note positively the clarification of the 'connected information' concept in ESRS 1 – chapter 9, which helps reduce fragmentation and repetition across the sustainability and broader corporate reporting, thereby promoting better connectivity.

Survey	FRANCE ASSUREURS	Association of financial institutions	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	France Assureurs welcomes the proposed amendments aimed at striking a balance between the prescriptiveness of the requirements and preparation efforts, and the relevance and comparability of information. In particular: -We support the reduction of "shall datapoints" in PAT and the deletion of the requirement to disclose whether the undertaking plans to implement a PAT for material topics and the associated timeline. -We are in favour of the proposed simplification and clarification of MDR – now renamed GDR - and their link with PAT in topical standards, which will likely enhance the readability of the report and avoid redundancy of information in different parts of the sustainability statement. -We appreciate the improved alignment between PAT disclosures and IROs, including the flexibility to report at a higher aggregation level where appropriate. This change enables undertakings to reflect internal management practices more accurately, enhancing the usefulness of the reported information. In addition to the simplifications already made, we would recommend amending SBM-3 paragraph 22 which requires disclosing "how the undertaking has addressed or plans to address" material IROs. This seems redundant with PAT disclosures. We would also recommend softening the significance criteria in SBM-1 AR10, which currently require disclosure based on either representing 10% of turnover or being connected to material impacts. These criteria should be presented as indicative rather than prescriptive. As the objective of this disclosure is to provide a general understanding of the undertaking's business model and its connection to sustainability matters, rigid thresholds may result in disproportionate reporting efforts without necessarily improving the quality of information.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	France Assureurs supports the changes implemented by EFRAG. The elimination of "may disclose" datapoints from the standard helps to reduce confusion when preparing the report. The new articulation between DR and AR is also a welcomed proposal that enables undertakings to better navigate the standard and identify the mandatory disclosure requirements. However, "should/shall consider" wording should be amended as it is not clear if the related DR are mandatory or optional. Such references should either be replaced by "shall" only or "may" depending on the case, or otherwise clarified. Moreover, we note that some AR still include additional information – which could easily be part of the DR - and thus are not always limited to mandatory methodological guidance (e.g. AR 22 for para 51, AR 38 to par 111a, AR 28 for para 29, AR 8 for para 20). Finally, while we recognise the intent to improve the language of the standards, we call on EFRAG to implement changed terminology with care to avoid misinterpretation or misalignment with prior guidance used by preparers in the first reporting year. Simplification should not create excessive burden to comply with new obligations.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We highly support EFRAG's recommendation to not include NMIG in the upcoming delegated act. If the purpose of the NMIG is to provide for "how to report guidelines", it should not be legally adopted in a delegated act as this would reintroduce voluntary datapoints and bring confusion for preparers and auditors on how to interpret the guidelines. Indeed, it is of utmost importance that stakeholders, particularly auditors, do not interpret the NMIG as encouraging undertakings to report additional information, but rather that its scope is clearly understood as being limited to clarifications and illustrations. We are concerned that, if not clarified, the NMIG may be interpreted by stakeholders as a 'best practice' with which undertakings might be implicitly expected to comply. The following disclaimer should be added at the beginning of the NMIG: "These NMIG provide illustrative examples of how undertakings may disclose information required by ESRS disclosure requirements. They shall not be construed as an interpretation of the standards, nor as covering the full range of possible facts and circumstances, but only as one possible form of relevant disclosure among others." Also, a reduction in its volume would also enhance efficiency, reduce the burden, and provide greater clarity for undertakings wishing to consult it. Finally, we suggest clarifying how the application of the ESRS will be supported and interpretation uncertainties addressed in the future – whether through Q&A, non-authoritative implementation guidance such as the NMIG, or other means. Such prospective clarification is essential to facilitate implementation and reduce interpretative risks. In addition, it is important to clearly designate the body responsible for managing the NMIG.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	France Assureurs sides with the reliefs introduced. We support the introduction of the "undue cost or efforts" principle which responds to stakeholders' demands for proportionality. Further illustration on how to apply this concept would be useful to ensure consistent interpretation, particularly with auditors (e.g. interpretation on considering the relevance of information for users). However, it is of the utmost importance that the proposed reliefs are expressly compatible with the qualitative characteristics of the information. We welcome the introduction of flexibility regarding metrics, in line with the proportionality principle, especially regarding metrics that may not be estimated due to undue cost or effort, and for non-material activities that may be excluded from the calculation of certain metrics. Regarding value chain information, we welcome the removal of the systematic preference for direct data in the calculation of value chain metrics, which allows undertakings to use either direct data or estimates depending on practicability and reliability. However, we recommend clarifying that value chain information is required only for the identification of material topics as implied by ESRS1 paragraph 62, but not for the disclosure of metrics. We welcome the flexibility on including newly acquired subsidiaries, which reflects operational realities and provides clarity on consolidation timing. There is a general risk of conflict between the fair presentation principle and the reliefs proposed: it should be clear that applying a relief does not contradict fair presentation. We wish to stress that the application of one or more reliefs must remain consistent with the principle of fair presentation. It should be expressly stated that the use of relief does not contravene this principle. We oppose the idea that reliefs are dynamic and may become obsolete over time. The reliefs proposed should not be temporary, as they constitute one of the key elements of the ESRS simplification

Survey	FRANCE ASSUREURS	Association of financial institutions	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We welcome the relief for lack of data quality for metrics to allow for partial data coverage. Nonetheless, we regret that this principle explicitly excludes GHG emissions (ESRS E1-6), when reliable data on scope 3 emissions remain difficult to collect especially for financial institutions. We would recommend extending – at least temporary - this relief to E1-6 to support realistic implementation. Finally, it seems that differing interpretations persist among stakeholders. As such, we call on EFRAG to clarify this relief and the interactions between ESRS1 section 7.3 and § 91, as well as with E1-6.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We acknowledge the usefulness and relevance of anticipated financial effects; however, as of today, no mature and commonly accepted methodology exists among stakeholders, which prevents data comparability. In addition, anticipated financial effects significantly expose companies in the context of public reporting, and considerable uncertainty remains as long as it is unclear how the reliefs proposed by EFRAG will operate. From a forward-looking perspective, we call for the development of public methodologies that would enable stakeholders to assess these anticipated financial effects within a more standardized and comparable framework, and one that is less subject to debate with auditors. Pending a more stable environment, we would support option 2 that requires companies to disclose qualitative information, with quantitative information to be provided on a voluntary basis			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We wish to underline the current challenges in calculating anticipated financial effects for climate matters. At the same time, we recognize the importance of ensuring that such climate-related information matures rapidly. As such, we would support the option to prioritize quantitative information, while permitting their omission under certain circumstances (i.e., where no reasonable or supportable data is available), accompanied by a three-year transition period. Where the publication of quantitative information is not possible, the undertakings shall publish qualitative information. Should this option be adopted, we would like to stress out that only the requirements of E1-11 should apply and it should not be in addition to ESRS2 SBM-3 §23 and §24 (for instance, undertakings should not be required to disclose financial performance and cash flow). We would like to stress that the implementation of this option must consider sensitive information and business confidentiality. In addition, we support the inclusion of all reliefs granted by the ISSB, including those relating to 'skills and capacities' (currently excluded by EFRAG).			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Although the integration of elements from the ISSB framework (fair presentation, reliefs, etc.) is a positive step towards interoperability, it is important to emphasize that, as interoperability is not the main objective of EFRAG's mandate, it should not be improved solely through amendments to existing requirements. In our view, the exposure drafts contain additional requirements introduced to increase interoperability with the ISSB (see E1-3§21, E1-3 AR 8 §20). Convergence efforts between EFRAG and the IFRS should continue. However, it should be acknowledged that certain differences between the two frameworks are acceptable, beyond the well-known divergence on materiality, especially where the ESRS have already integrated lessons learned from implementation. To address interoperability in a pragmatic manner, we support the ANC recommendation suggesting complementing the ESRS with dedicated ISSB interoperability guidance. This would enable undertakings wishing to align more closely with IFRS S1 and S2 to disclose additional datapoints, without creating extra burden for other undertakings. Such guidance would reintroduce, on an optional basis, the datapoints originally derived from IFRS S1 and S2 but removed from the current draft for simplification purposes.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	FRANCE ASSUREURS	Association of financial institutions	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We support the reduction in the number of mandatory datapoints and the deletion of all voluntary datapoints in the ESRS. It illustrates EFRAG's efforts and willingness to respond to stakeholders' concerns around reporting complexity, excessive granularity, and operational burden for preparers. However, we would like to draw to EFRAG's attention that the use of several expressions like "is useful information" / "is a possible aspect to cover" may lead to uncertainty regarding the actual requirements for undertakings and should be clarified. We also consider that efforts in reporting burden reduction could have been further pursued, especially the reduction of "shall" DPs, which we would have expected to be the focus of the simplification. Finally, it is important to note that a 57% reduction in mandatory datapoint will not necessarily translate into a proportional decrease in report length or reporting burden. While we welcome the notable reductions in certain topical standards, significant concerns remain regarding newly introduced concepts and methodologies that may actually increase the reporting effort. Examples include the requirements on fair presentation, the distinction between gross and net impacts, and the mandatory general disclosures for all metrics relating to data types and sources — as well as, for environmental metrics, the disclosure of specific environmental conditions and characteristics of the area where the impact occurs.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	FRANCE ASSUREURS	Association of financial institutions	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	As a general comment, we are not in favour of introducing new mandatory datapoints in the ESRS, as this goes against the simplification exercise and the mandate given to EFRAG by the European Commission. However, if those were to be adopted, we have the following comments: -On G1 §14 Business conduct confirmed incidents, the requirement to disclose details about the nature of incidents, which is potentially highly sensitive information (rather than just the number of incidents), appears to us to involve a legal risk (the risk of being subject to inspections and penalties by third countries) and an additional workload for preparers. -On G1 §10 Business conduct– Training of procurement team, we anticipate potential challenges in obtaining information on training programs for the identified targets. We therefore recommend that the distinction between targets be made optional.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	As a general comment, we are not in favour of introducing new mandatory datapoints in the ESRS, as this goes against the simplification exercise and the mandate given to EFRAG by the European Commission. However, if those were to be adopted, we have the following comments: -On E5-4 Percentage of total weight that are critical and strategic raw material §15c, it is very difficult to obtain this information from the insurer part -On E5-5 Percentage and/or total weight for which the finale destination is unknown, it is also very difficult to obtain this information - this information would therefore be subject to a high degree of uncertainty (via extrapolation).			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We support the ambition of the "fair presentation", particularly its aim to reduce unnecessary disclosures and the documentation required to demonstrate omitted datapoints are not material. We remain vigilant about its implementation and interpretation by preparers and auditors. It is paramount that the use of reliefs does not contradict the fair presentation principle, as this would undermine the simplification exercise. It should be explicitly clarified that the use of reliefs in the ESRS (including phased-in provisions in Appendix C) is compatible with fair presentation in the sustainability statement, and that fair presentation does not contradict the exercise of reasonable and informed judgement in the DMA. Formalizing fair presentation may lead preparers and auditors to adopt conservative interpretations of "completeness," "accuracy," and "verifiability" to mitigate legal and assurance risks. This could increase reporting burdens without enhancing the usefulness or relevance of the disclosures. We do not support the introduction of "complete" (aligned to ISSB standards) among these principles, since it implies a degree of exhaustiveness incompatible with a limited assurance framework. ISSB standards are not regulatory frameworks, and do not bear the same audit consequences as the ESRS. We see challenges in applying fair presentation to inherently uncertain and forward-looking disclosures. Many sustainability metrics and narratives rely on estimates, evolving methodologies, or scenario analysis. Hence, "accuracy" and "verifiability" cannot be understood as demanding absolute precision. The current definition risks creating unrealistic expectations regarding what can be reported and assured. Fair presentation must be aligned with the limited assurance under CSRD, and the related audit procedures must be specified. It should be clarified that fair presentation does not imply disclosures must be "true" in an absolute or static sense. This safeguard is necessary to ensure preparers are not held to disproportionate evidentiary standards, especially when reporting on complex, forward-looking, or qualitative matters.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	France Assureurs agrees that financial institutions should be exempted from disclosing absolute GHG emissions targets when only intensity targets have been set, provided they disclose contextual information (evolution of sectoral investment and financing policies). This exemption is particularly relevant for insurers, given that their emissions are mostly indirect and do not significantly arise from direct operations. Estimating absolute emission targets in this context requires extensive assumptions and complex modelling across diverse portfolios, resulting in outputs with low reliability, poor comparability between different financial institution resulting in a limited added value for users. Translating intensity into absolute values could lead to reducing investment by avoiding high-emitting policyholders instead of supporting their transition, misrepresenting progress and hampering overall decarbonization efforts. Intensity targets make it possible to monitor sectors in transition and ensure that they do not lose funding. Nevertheless, we would not be opposed to the publication of absolute values in certain specific circumstances, such as when the financial institution has chosen to phase out of highly emissive sectors. It should also be noted that SBTI, in its latest publication, considers intensity targets to be relevant, as well as absolute value targets and portfolio alignment percentages			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	This change would result in an increase in the number of countries to be reported on for these two disclosures, thereby creating an additional burden in preparing the information. The threshold of 50 employees is not relevant, as it may lead to the inclusion of countries that are not material in comparison with the rest of the group. Accordingly, the alternative condition of representing at least 10% of the group's total workforce should be retained. We also consider that the various tables presenting this information would become difficult to read.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	As a general comment, France Assureurs supports every initiative that aims to improve alignment between the CSRD, SFDR, and all other regulations that belong to the sustainable finance framework. Alignment is key for regulatory consistency. We advocate for the careful review undertaken by EFRAG and acknowledge that several deletions or consolidations of SFDR-related datapoints were justified, particularly where information was duplicated, could be derived from other disclosures, or lacked material relevance. We welcome the retention of IRO-2 paragraph 28f which requires a table of all datapoints that derive from other EU legislation, indicating where they can be found in the report or, if they are not material according to the DMA of the undertaking. Finally, it is important to take into account the forthcoming review of the SFDR, which may result in the removal of PAI indicators considered less relevant. If such indicators are no longer mandatory, this should be reflected in a streamlined set of corresponding ESRS datapoints for financial institutions. To ensure consistency over time, this could be achieved by establishing an explicit dynamic link between the ESRS and the SFDR PAIs, allowing the standards to evolve in line with future regulatory changes.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	FRANCE ASSUREURS	Association of financial institutions	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We support the review of AR 26 in Amended ESRS E4, as it contributes to the overall simplification of the standard while maintaining a level of methodological guidance that can assist undertakings in defining relevant biodiversity- and ecosystem-related targets. However, we underline that the application requirements should retain sufficient flexibility and must not turn into mandatory expectations. AR 26 should remain illustrative and optional in nature. In this regard, guidance under AR 26 should also promote proportionality and scalability in reporting practices. We recommend that EFRAG refrain from integrating immature methodologies into the ESRS biodiversity reporting framework, including science-based approaches such as the Science Based Targets Network (SBTN). Instead, such methodologies could first be introduced in the NMIG, until they reach a sufficient level of maturity and harmonisation. At this stage, references could for example be made to the more mature Taskforce on Nature-related Financial Disclosures (TNFD) core global disclosure indicators, to illustrate aspects that biodiversity- and ecosystem-related targets may address. Finally, we express concern about excessive granularity in ESRS E4, particularly regarding site-specific disclosures, such as the location of material IROs (§20a).			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	We regret the deletion of the voluntary datapoint on adjusted gender pay gap, which provided more meaningful information. Indeed, the adjusted basis offers a better understanding of pay equity within organizations, by accounting for relevant contextual factors (employee category, age, country etc.). While we support efforts to reduce complexity, we believe that optional datapoints with high relevance to key social topics such as pay equity should not be excluded entirely from the reporting architecture.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Regarding the positioning of PATs in ESRS 2, we understand that they have been grouped together to avoid repetition within each thematic standard. However, we would have preferred the structure of the standards to follow that of the sustainability statement, even if this resulted in certain requirements being repeated within each thematic standard. As it currently stands, contributors working on a thematic standard must remember to refer to ESRS 2, which is not intuitive and creates a risk of omission. At the very least, each thematic standard should include an explicit reference to ESRS 2.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Currently, when ESRS E1 is deemed immaterial, the justification required is very burdensome and therefore quite dissuasive. Under the EFRAG proposal (ESRS 2.28.b), it would suffice to explain the reasons for this conclusion, which appears much less dissuasive (assuming auditors take a pragmatic approach). From an investor perspective, it could create a risk that more companies will refrain from publishing E1, and consequently their GHG.			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	« The simplifications proposed on ESRS S1 still raise significant implementation challenges on the following DR: S1-6; S1-9, S1-12, S1-13, S1-16. Notably, the current version of the DR related to non-employees (S1-6) and adequate wages (S1-9) are particularly complex to interpret leaving room for varying interpretations and divergent methodologies across companies (e.g. the non-employees number fluctuate depending on the project cycles, for adequate wages the proposed benchmark "ILO Convention No. 131" is not a universal legal standard, as it does not define a specific amount or a single methodology…). The requirements linked to these 5 S1 DRs create major operational challenges, in terms of data reliability, resource mobilization, auditability and comparability and should be clarified. »			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		As regards policies, actions and targets (PAT), we would like EFRAG to clarify whether it is possible to communicate on their existence, even if not all the listed elements exist or have not been formalised (sort of partial alignment with the criteria). This is particularly necessary for policies, where the definition is too restrictive and not always well understood (for example, elements such as charters and agreements exist within the HR function and should be mentioned even if they do not meet all the criteria, while being transparent about these criteria not met).			
Survey	FRANCE ASSUREURS	Association of financial institutions	France	35.ESRS2_GOV-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	ESRS 2 DP GOV-1.21(d) is essential for financial institutions because it is a SFDR PAI datapoint, but its current wording is misleading and we have to read the SFDR requirement to understand what is expected. In order to better fit with SFDR, it should be clarified that the DP requires the % of women and % of men of board members – and not a ratio of female to male board members (which doesn't make any sense).	ESRS2	GOV-1 - The role of the administrative, management and supervisory bodies in relation to sustainability	
Survey	FRANCE ASSUREURS	Association of financial institutions	France	35.E1-6.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The concept of adaptation refers to the adaptation process of the undertaking to actual and expected climate change. This concept should be extended to what the undertaking does to enable other persons (legal entity or natural person) to adap (= case for insureurs). Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	With regard to risk assessment within the double materiality process, we agree with the approach of leveraging the Enterprise Risk Management (ERM) processes already established within the company. Accordingly, it is our view that risks should be assessed net of mitigation measures, while retaining the voluntary option to also disclose the gross risk assessment. This approach would ensure consistency with the information reported in the Financial Statements (i.e. connectivity) and, where applicable, would allow companies to expand the disclosure should they deem it appropriate and relevant			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We believe that the proposed changes have not achieved the goal of simplifying the Double Materiality Assessment process. In particular, the new guidance on the approach described in Appendix C for impact assessment introduces further complexity by differentiating between current and potential impacts, reporting periods, and the timing of remediation, mitigation, and prevention actions. It would be preferable to adopt a uniform principle of assessment on a gross basis of the actions taken. This approach would ensure greater clarity, reduce the risk of divergent interpretations, and enhance comparability between companies, while still allowing for the disclosure of measures taken in the dedicated sections of the standards.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	A2A believes that the document could be useful as additional, non-mandatory material, but only for further study and clarification of the DPs of the Exposures Drafts. We believe that the non-binding nature of NMIG has to be explicitly communicated and consistently understood by both preparers and auditors. Furthermore, we suggest separating the different types of information contained in the document: for example, if it concerns "clarifications" to the DP requests, then these should be included in the Delegated Act. There should be no implicit expectation that the examples provided must be followed or justified if not applied. If, on the other hand, it concerns voluntary DPs, then these should be excluded from the Delegated Act to avoid misunderstandings and confusion among preparers. In the end, an explicit statement confirming that NMIG cannot be used for audit purposes, along with its separation from the legislative text, would reinforce this distinction.

Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	In general, we welcome the introduced simplifications and understand the reasons behind the various reliefs provided, which help reduce the reporting burden. However, we believe it is essential that these measures do not result in a decline in the quality and completeness of the reported information. It is crucial to maintain an adequate level of standardization and rigidity of the standards to ensure transparency, comparability, and reliability of the data			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We express our preference for Option 1. In our view, disclosure of financial effects related to climate risks should not be left on a purely voluntary basis. These risks are already frequently embedded in corporate risk assessment processes and are of increasing significance from a financial perspective. We therefore consider it appropriate that the omission of quantitative data be restricted to limited and well-defined circumstances, as foreseen in the proposed amendment. In addition, with regard to datapoint 41 (f) we note that establishing a reliable methodology for the identification of potential stranded assets is particularly challenging, and that the practical applicability of a 1.5°C pathway may raise some concerns. Considering that certain climate risk assessment tools already rely on comparable scenarios, we suggest amending requirement (f) by adding the words "or equivalent" after "climate change to 1.5°C", in order to allow for greater flexibility and consistency with existing approaches.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We believe that all Application Requirements related to the quantification methodology should be retained within the text of the Disclosure Requirement. These guidelines are essential to provide a clear and consistent methodological reference for all companies, ensuring comparability and operational support in preparing anticipated financial information. Their inclusion helps balance the need for simplification with users' requirements for reliable and comparable information			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	A2A operates in the EU, with more than 95% of its services and plants located in Italy, and therefore only applies ESRS as per CSRD. We selected "yes" because we agree with the fact that in Sustainability reporting, there is the need of more interoperability between Standards across Countries.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	A2A believes that reducing qualitative DP is an acceptable balance between reducing the burden and preserving the information necessary to fulfill the objective of the EU Green Deal. However, we believe that some quantitative DP related to the Characteristics of the undertaking's employees (formerly S1-6), Diversity metrics (formerly S1-9), and Training skills development metrics (formerly S1-13) should be retained in order to: • highlight certain characteristics of the company's workforce and the organization's commitment to training and development; • avoid losing the reporting effort from previous years; • avoid losing data, which is especially useful when completing questionnaires that require public information. DP to be retained: • S1-6 DP50c: maintain the number of employees who have left the company (required for some questionnaires and in any case for calculating turnover); • S1-6 DP52 a and b: Maintain at least the breakdown between full-time/part-time and gender • S1-9 DP66b: Maintain the breakdown by age group S1-13 DP83b: Maintain the breakdown by gender			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	A2A supports the introduction of the concept of "fair representation" because it allows for better alignment between the various Standards and therefore greater comparability between reports. Furthermore, we believe that using the concept of fair representation can move beyond the idea of sustainability reporting as a mere compliance exercise. However, we also believe it is necessary to introduce guidelines and methodologies for both the implementation of the concept of fair representation and for auditing/assurance activities.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The A2A Group operates primarily in Italy, with a limited number of employees abroad, no more than 50, and in any case, less than 10% of the workforce. We agree with the new threshold, although the change does not impact our reporting.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	The A2A Group operates primarily in Italy, with a very limited number of employees abroad (only 3 people outside the EU). Thus, we believe that this issue is not material for our Group.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We believe it is essential that all methodological guidelines related to the definition of targets and metrics in the field of biodiversity and ecosystems be maintained within the Disclosure Requirement. Biodiversity is an area characterized by high complexity and variability, so leaving wide discretion in defining metrics could compromise the comparability and reliability of information between companies. Maintaining clear methodological guidelines is therefore essential to support companies in defining consistent and comparable objectives and to ensure the usefulness of information for stakeholders.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The A2A Group is partially in favor of the proposed changes, in fact it suggests making the disclosure of the gender pay gap by employee category voluntary, in order to: - highlight certain characteristics of the company's efforts to reduce gender pay gap; - avoid losing the reporting effort from previous years; - avoid losing data, which is especially useful when completing questionnaires that require public information			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	The A2A Group agrees with the proposed changes because we believe that the effort required to collect data is greater than the value of the information.			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We believe that the proposed change to the definition of the term "Recovery" in the new Standards could have a significant impact. Currently, in indicator E5-5, waste-to-energy is classified under "other recovery operations" within recovery waste. According to the new version, it would be reclassified under "other disposal operations" under disposal. This change could encourage companies to favor disposal instead of considering energy recovery of waste as a virtuous practice. We do not agree with this change and believe it is appropriate to maintain the current definition of recovery to properly value waste recovery activities, in line with the waste hierarchy established in the EU Waste Framework Directive (Directive 2008/98/EC).			
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	35.E1-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We believe it is important that, within the E1-1 Transition Plan disclosure requirement, the trajectory well below 2°C, in addition to the 1.5°C trajectory provided for by the Paris Agreement and the European Climate Law, be explicitly considered. This would allow companies to more accurately represent their transition plans in relation to different decarbonization scenarios that are still consistent with international and European objectives.	E1	Disclosure Requirement E1-1 - Transition plan for climate change mitigation	
Survey	A2A	Preparer (non-financial preparing a sustainability report)	Italy	35.E1-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We believe that all references to the EU Taxonomy should be maintained as mandatory requirements and not included in the NMIG. The interconnection with the data provided by Taxonomy is essential to ensure full connectivity between sustainability and financial information. Only a mandatory approach can ensure consistency, comparability, and reliability of the information provided to stakeholders.	E1	Disclosure Requirement E1-5 - Actions and resources in relation to climate change	
Survey	Finnwatch ry	NGO	Finland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3

Survey	Finnwatch ry	NGO	Finland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	We tentatively agree with the new guidance. Generally, we feel that DRs on companies' positive impacts could be completely cut from the standards as they add little value to users and companies have other channels to communicate them too.			
Survey	Finnwatch ry	NGO	Finland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We generally agree with that the amendments strike an appropriate balance, however, we do regret the deletion of disclosure requirements on metrics from the topical standards and would recommend adding them back.			
Survey	Finnwatch ry	NGO	Finland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We generally agree with the removal of "may disclose" datapoints. However, we note that others have suggested that some of their contents - especially when it comes to environmental standards - be included in the standard as examples. This sounds like a good idea, especially considering that reporting on certain environmental issues is new for many companies.			
Survey	Finnwatch ry	NGO	Finland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We have concerns in particular about the "undue cost and effort" relief as it gives companies a lot of discretion to not report on certain things and as such opens up possibilities for abuse. Some paragraphs under the related section are also worded in such a way that they are difficult to understand. They also potentially contradict international business and human rights standards. We also note that others have expressed concerns over combined impact of all the reliefs, and echo those concerns.			
Survey	Finnwatch ry	NGO	Finland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We prefer Option 1. The obligation to estimate and disclose the financial effects is needed in order to add credibility to other elements of reporting (e.g. climate transition plan). Without such estimate there may be an unobservable disconnect between the business model, planned measures and sustainability targets.			
Survey	Finnwatch ry	NGO	Finland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Finnwatch ry	NGO	Finland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Finnwatch ry	NGO	Finland	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	*This is a general comment that is not relevant to any specific standard.* In our view, the proposed changes do significantly simplify the reporting standards, cut a number of compliance/tick-the-box oriented datapoints and repetition - which are all welcome changes. Further reduction of mandatory datapoints would risk undermining the purpose and objectives of the sustainability reporting directive and the ESRS standards.			
Survey	Finnwatch ry	NGO	Finland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We do welcome this addition. We do however note that alongside with other changes, it provides companies more flexibility and therefore responsibility over the content of their reporting. This is another reason why we are critical over the proposal to provide companies with e.g. undue cost and effort -relief.			
Survey	Finnwatch ry	NGO	Finland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	*This is a general comment related to the question 33, not ESRS 1 only.* We have provided an answer only on the five standards we are more familiar with and which we also comment on in more detail in part 3 of this consultation.			
Survey	Finnwatch ry	NGO	Finland	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	Finnwatch ry	NGO	Finland	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	To an extent, the DMA process is clearer with more explicit guidance as to where expertise may be sought. However, we have concerns that the reduction of burden may impact robustness, rather than merely simplifying. The margin for omission of information in the DMA based on the "undue cost or effort" principle could be detrimental to the quality of reporting.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	In cases where the disclosure of the impact in future periods is not reported if fully remediated, we raise some concerns related to monitoring of the long-term success of remediation / mitigation activities. We propose introducing a timeframe for disclosure of mitigation actions pending review of success of such actions.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome the clarity provided in this section.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	In the illustrative guidance for E4, we call for greater emphasis on the necessity for external expertise in assessing biodiversity-related IROs, particularly impacts. The removal of non-mandatory elements from the standard is a positive change, which should improve comparability.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The proposed amendments are sufficiently balanced. However, it is critical to retain the 'spirit of the law', in the sense that the aim of this Directive is to facilitate transformative change by EU businesses, rather than simply create an interoperable reporting system.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	In relation to "undue cost or effort," we propose explicitly adopting the terminology from S1 para 34(a), i.e. "use all reasonable and supportable information…" to raise the threshold of the costs and efforts that companies can reasonably be expected to incur.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Yes, however we would welcome the re-consideration of developing sector specific standards. This would reduce the burden of establishing (non)materiality across 12 standards for reporting entities, and streamline their data collection processes. In our view, this would have particular merit in relation to the environmental standards.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	22.E4.	Comments on deleted datapoints in ESRS E4	I agree	We agree to the extent that the reduction has been focused primarily on the duplication of mandatory datapoints across topical and cross-cutting standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We solely comment on ESRS E4 and are in agreement in relation to this standard.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We recommend that a clear approach to setting and monitoring biodiversity targets be adopted, (similar to the use of the GHG protocol to guide emissions targets in ESRS E1). We suggest alignment with the UN-SEEA approach, as proposed by the EU-funded Transparent and Align projects.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The clarification of the DMA process and the reduction of datapoints does achieve the objective of simplifying the standards. However, the simplification process is an impediment to the success of the objectives of the EU Green Deal. The necessity to transform our economic model should transcend short term concerns around the costs and efforts involved in high quality sustainability reporting.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The clarification of the DMA process and the reduction of datapoints does achieve the objective of simplifying the standards. However, the simplification process is an impediment to the success of the objectives of the EU Green Deal. The necessity to transform our economic model should transcend short term concerns around the costs and efforts involved in high quality sustainability reporting.			
Survey	BIOFIN-EU, University of Limerick	Academia	Ireland	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The clarity on the interaction between E4 and ESRS 1 and 2 is a positive change. The removal of voluntary datapoints should improve understandability and comparability of reports. However, we propose greater emphasis on the need for external expertise to fully understand the nature of biodiversity-related IROs in order to meet the objectives of the EU Green Deal.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	VCI agrees that the proposed amendments, together with other changes introduced in the amended ESRS, offer a suitable degree of flexibility to enable more focused, relevant, and connected sustainability reporting. However, we primarily interpret these adjustments as clarifications of existing options rather than as substantial simplifications. From our perspective, they do not lead to a meaningful reduction in implementation efforts or reporting complexity.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	VCI considers the proposed Level 3 amendments to be a significant improvement. The revised structure and the clarified interaction between ESRS 2 and the topical standards notably enhance the overall readability and usability of the framework. Particularly positive are the simplification of the standards, the clear reduction in mandatory ("shall") requirements within the Policies, Actions and Targets (PAT) section resulting in lower complexity and workload as well as the shortened content and the elimination of redundancies. Moreover, the direct placement of Application Requirements (ARs) following the respective Disclosure Requirements (DRs) improves both structure and clarity. However, some concerns remain regarding the Non-Mandatory Implementation Guidance (NMIGs). The NMIGs should be removed so they do not lead to indirect obligations.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	VCI broadly supports the proposed amendments, as they significantly enhance the clarity and usability of the ESRS. The revisions make it easier for companies to identify mandatory content and apply the standards in a consistent manner. In particular, the new structure, especially the placement of mandatory Application Requirements directly beneath the corresponding Disclosure Requirements, improves the document's navigability and reduces the need to jump between sections. While these changes improve structure and readability, the overall scope of reporting obligations remains largely the same. Therefore, the simplification mainly facilitates orientation within the standards rather than easing the reporting burden itself. However, the texts are still very complex and there are still unclear definitions.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The NMIG's might become a de facto "state of the art" that auditors, regulators, or stakeholders expect companies to follow. This would lead to even more effort the companies have to put into their reports. Therefore, the NMIG`s should be deleted.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	VCI does not agree with the decision to exclude any relief measure for commercially sensitive information, as referenced in paragraph 70 of the [DRAFT] Basis for Conclusions (i.e. the potential inclusion of a similar provision in the Directive through the Omnibus legislative process). The ongoing legislative process should not prevent EFRAG from directly addressing this issue within the standards—especially after acknowledging that it is a "concern frequently expressed by preparers" (paragraph 82 of the Basis for Conclusions). We note that section 7.7 of the current ESRS 1 directly quotes Article 2 of the Trade Secrets Directive in paragraph 106, conditions (a)–(c), which provides clearer alignment with existing EU law compared to previous drafts. However, the current wording limits the scope to information "corresponding to intellectual property, know-how or the results of innovation," thereby excluding other types of commercially sensitive information protected under the Trade Secrets Directive. To ensure consistency and full alignment with the Directive, this qualifying language should be removed. Additionally, the ESRS could offer greater flexibility in this area, following the approach taken in the GRI Standards. GRI 1 allows "confidentiality constraints" as a valid reason for omission, provided the reporting undertaking explains the rationale. It should also be considered that the publication of detailed site-level data—including coordinates and types of processes carried out—may be subject to confidentiality, competitive concerns, or trade secret protections. Members also report confusion and uncertainty when disclosing confidential information, particularly in justifying omissions to auditors.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	VCI agrees that the proposed relief for lack of data quality on metrics strikes an acceptable balance between flexibility for preparers and preserving transparency. Additional clarification on the interpretation of "reasonable" effort would help ensure consistent and practical application across companies and sectors.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Option 2 preserves flexibility by allowing companies to voluntarily provide quantitative information where available and relevant, without creating a mandatory obligation. It encourages companies to provide clear narratives of expected financial implications instead of uncertain projections, which may not be comparable across firms. Also, Mid- and long-term financial effects are rarely available in reliable, comparable form; focusing on qualitative assessment supplemented by quantitative information only where meaningful is the more pragmatic approach. Quantitative projections would be highly subjective and could reduce comparability rather than improve it.

Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	VCI acknowledges that the proposed amendments contribute to improved interoperability and support simplification goals, particularly through the focus on fair presentation and materiality. However, we believe further clarification is needed regarding the fair presentation principle and the definition of materiality—especially in terms of user relevance—to prevent overly broad or ambiguous disclosure requirements. Moreover, interoperability should not be interpreted as a one-sided alignment, where ESRS simply adopts the wording and provisions of IFRS S1 and S2. Instead, the ISSB should give due consideration to the feedback from European preparers of sustainability statements. This is particularly important with regard to the quantification of anticipated financial effects, which we believe should be removed entirely from the IFRS framework.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	22.E2.	Comments on deleted datapoints in ESRS E2	I partially agree and partially disagree	VCI welcomes the proposed reduction in "shall disclose" data points under the materiality principle, as it represents a meaningful simplification and helps reduce the reporting burden, while still preserving the core information necessary to support the objectives of the EU Green Deal. However, we see further potential to eliminate data points that are either not relevant for financial users or not realistically collectible by companies. In this context, it is important to emphasize that reducing the overall length and complexity of the sustainability report is just as crucial as cutting the number of data points, given the significant variation in their complexity. Unfortunately, we do not anticipate a substantial reduction in reporting volume under the revised ESRS. While the number of data points has decreased, the underlying disclosure obligations largely remain unchanged. Some concerns persist, particularly with regard to environmental data points. Although simplifications have been introduced in certain areas such as financial effects and own workforce the environmental disclosures have only been partially streamlined. In many cases, requirements were not removed but merely merged or relocated, and in some instances, new obligations were added. We are also critical of the inclusion of Substances of Concern (SoCs) in the ESRS. These substances often overlap with existing categories such as Substances of Very High Concern (SVHC), leading to double counting and inconsistent data. Without a clear hazard category hierarchy, reporting on SoCs adds unnecessary complexity without delivering additional value. In global supply chains where only consumer articles are imported into the EU, chemical product information often differs from EU requirements. Suppliers outside Europe typically follow local chemical regulations, meaning EU-specific regulations are not legally recognized or applied. For the sake of simplification and consistency, SoCs should not be included as a general requirement for all stakeholders.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	The purpose of the simplification mandate is to reduce the number of data points to reduce the length of the report and to finally strengthen the meaningfulness of the report (and definitely not to increase the number of mandatory data points. Therefore, this is a step in the wrong direction. We therefore recommend to stick to the rule of no additional reporting obligations. Making E4 Biodiversity transition plans mandatory is not supporting its development but rather hindering development and innovation in this field. The decision to include Biodiversity TP information in reporting shall remain voluntary. Highlighting the training of procurement team within ESRS G1 is unnecessary detail and focus of one employee group. The addition shall be deleted.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	In general, we do not support the introduction of new data points, as they typically result in significant additional effort for reporting entities without a corresponding increase in decision-useful information. The cost-benefit ratio of expanding disclosure requirements must be carefully considered, and in our view, the current framework already places substantial demands on preparers. ESRS 1 provides the framework for preparation. Including a mandatory data point to state that ESRS 1 was considered will only increase the audit burden without improving the quality of sustainability statements. E2-4 secondary microplastics shall not be added as separate data point since only narrative information is available. E5-4 Addition of critical and strategic raw material shall be deleted. Reporting on "critical and strategic raw materials" is not about ESG/sustainability reporting. Reporting must not be used as vehicle for data collection related to the EU's geo-strategic interests. E5-5 Addition of "final destination unknown" shall be deleted as the stated goal of avoiding unreasonable estimations can be achieved without introducing new data points.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	The introduction of the concept of "fair presentation" raises significant concerns. While we acknowledge that this notion could enhance alignment with ISSB standards and offer reporting undertakings greater flexibility, we share the concerns expressed by some EFRAG SRB members. Specifically, it may impose additional obligations on companies, requiring not only compliance with the standards but also a demonstration that the reported information fairly represents the interests of all relevant stakeholders. This could also potentially increase the responsibilities of board members. The ESRS introduces impact materiality, which encompasses environmental and social dimensions beyond financial relevance. Applying a fair presentation requirement in this context risks exposing preparers to disproportionate legal, assurance, and reputational risks. Sustainability data is often forward-looking, qualitative, and based on judgment, lacking the evidentiary robustness of financial data. The absence of established practices and experience in applying impact materiality makes it difficult to define what constitutes a "complete and faithful" representation, thereby increasing uncertainty and inconsistency. Embedding fair presentation as a legal requirement may unintentionally trigger regulatory enforcement and audit complexity, without necessarily improving the quality of reporting. Assurance can already be effectively conducted using existing standards. Enforcement efforts should instead focus on the qualitative characteristics already embedded in the ESRS—namely relevance, comparability, verifiability, and understandability.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3				
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	EFRAG itself has explained in a good way that the simplification has occurred by deleting irrelevant indicators or by merging information required into one datapoint when possible.			
Survey	German Chemical Industry Association - VCI	Business association (other than association of financial institution)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	If the disclosure specifications and application requirements for E4-4 (targets) have largely been removed as part of the simplification process, it becomes essential to provide clear and accessible guidance elsewhere. If ESRS Set 1, E4 AR 26 is indeed outdated, it should be urgently revised. This would enable companies to set biodiversity and ecosystem targets that reflect their specific material impacts—where such impacts exist—rather than requiring adherence to a one-size-fits-all approach. The primary objective must remain simplification and reinforcement of the materiality principle, rather than introducing more complex target-setting rules. We have identified two key risks associated with overly prescriptive guidance: -Biodiversity metrics remain methodologically underdeveloped. Unlike climate-related metrics, there is no universally accepted methodology. Therefore, flexible target-setting options are essential. -Detailed guidance risks undermining the Double Materiality Assessment (DMA) by creating a "checklist" mentality. This can pressure companies to report on issues that their own assessments have deemed non-material.			
Survey	Neuberger Berman	Asset manager/Investor	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Neuberger Berman welcomes the clarifications provided on the double materiality assessment within the revised ESRS. The new guidance, which encourages a top-down approach centered on strategy, represents a positive step by reducing the burden of exhaustive bottom-up scoring. While we support this more pragmatic methodology, we recommend explicit recognition that companies should be able to refer to the SASB standards to identify industry-specific risks, opportunities, and outcomes (IROs) that are financially material as part of the double materiality assessment. We wish to emphasise the critical importance of maintaining a clear distinction between financial materiality—essential for investors' capital allocation decisions—and impact materiality. It is crucial that financially material information remains clearly presented and is not obscured by broader sustainability disclosures. The EFRAG draft simplified ESRS introduces the concept of non-obscuring information, which we support. However, enhanced alignment between ESRS and ISSB standards would be achieved if financially material disclosures intended for investors were required to be clearly identifiable and not obscured by other impact-related information reported to other stakeholders. This requirement is not yet explicitly included in the proposed changes. We encourage EFRAG to ensure that financially material information is kept distinct and accessible to investors, thereby supporting both robust interoperability and effective decision-making.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Neuberger Berman	Asset manager/Investor	United States	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Interoperability between the ESRS and ISSB standards is essential to ensure consistent, decision-useful sustainability disclosures for companies and investors. The ISSB's approach allows companies to exercise judgement in assessing sustainability-related risks, including how mitigation activities—planned or already in place—inform risk identification. This flexibility enables entities to consider both net and gross assessments depending on the circumstances, reflecting the complexity and specificity of real-world risk management. However, the new EFRAG proposal introduces mandatory, prescriptive guidance for impact materiality, dictating exactly how companies should consider mitigation, prevention, and remediation actions. By prescribing a fixed approach, EFRAG risks undermining the necessary judgement and flexibility that the ISSB standards encourage for financial materiality assessments. This rigidity may result in inconsistent identification and disclosure of sustainability-related risks, making it more difficult for companies reporting under both frameworks to reconcile their disclosures. We urge EFRAG to reconsider the prescriptive approach and instead align with the ISSB's principles-based methodology, which allows for professional judgement and is better suited to the realities of risk identification and reporting.			
Survey	Neuberger Berman	Asset manager/Investor	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Neuberger Berman supports the proposed amendments aimed at enhancing the readability, conciseness, and connectivity of the ESRS standards. As users of sustainability information, we recognise the inefficiency and limited value of duplicating content in companies' annual reports, particularly regarding policies, actions, and targets. The reduction of duplicative indicators, clearer presentation of connected information, and use of appendices for detailed metrics are all positive steps that can improve the usability and accessibility of sustainability disclosures for report users. However, we caution that conciseness and simplification should not compromise interoperability with the ISSB's global baseline. The ISSB standards are increasingly recognised as the international benchmark for sustainability reporting. It is essential that the ESRS maintains alignment and does not fall below this baseline, as lowering the reporting threshold would risk creating further fragmentation and diminish the comparability of sustainability information across jurisdictions. Furthermore, to ensure sustainability reports remain useful for investors, we recommend that the ESRS strengthen the non-obscuring requirement. Specifically, financially material information presented to investors should be clearly identifiable and not obscured by disclosures intended for a broader stakeholder audience. This clarity is critical for effective capital allocation decisions and supports nteroperability. We urge EFRAG to balance the goals of simplification and conciseness with the need for robust interoperability and clear investor-focused disclosures, ensuring the ESRS continues to meet the needs of all users without sacrificing alignment with the ISSB's global standards.			
Survey	Neuberger Berman	Asset manager/Investor	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree				
Survey	Neuberger Berman	Asset manager/Investor	United States	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As noted previously, introducing reliefs in the ESRS that go beyond the scope of those provided in the ISSB standards—beyond what was agreed in previous interoperability guidance—is not advisable, as it risks lowering the reporting requirements for companies subject to the CSRD below the global baseline. The EFRAG draft simplified ESRS includes proposals for additional reliefs not present in the ISSB standards, such as those for acquisitions and disposals within the reporting period, as well as extensions of existing reliefs—for example, applying the undue cost and effort exemption to the disclosure of metrics related to an entity's own operations. Expanding or introducing new reliefs that are not aligned with the ISSB standards will create further complexity for companies that are required or choose to report under both frameworks. This divergence increases the reporting burden and makes it more challenging for companies to ensure consistency and comparability in their sustainability disclosures. In particular, the proposed relief for acquisitions and disposals during the reporting period may result in inconsistencies between the sustainability reporting boundary and the financial statements. This could complicate compliance with both ESRS and ISSB standards, and potentially disrupt the alignment and connectivity between sustainability information and financial reporting for users of ESRS disclosures.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Neuberger Berman	Asset manager/Investor	United States	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Neuberger Berman firmly believes that disclosures of anticipated financial effects should be a mandatory element of sustainability reporting. Information about the expected impacts of sustainability-related risks and opportunities on a company's financial position, performance, and cash flows is essential for investors who rely on these disclosures to inform their capital allocation decisions and stewardship activities. We therefore support Option 1 in that it makes such qualitative and quantitative disclosures mandatory, but strongly recommend that EFRAG aligns the reasons for omission of quantitative information with those provided by the ISSB standards (i.e. when the company does not have the skills, capabilities or resources to provide that quantitative information). When disclosures on anticipated financial effects are optional, there is a significant risk that investors will lack access to material information necessary to assess how sustainability issues may influence the future prospects of a company. The absence of clear, quantitative data on these matters undermines the ability of investors to compare companies, evaluate management's strategy, and make informed investment decisions. Optional reporting introduces variability in the quality and completeness of sustainability disclosures, which can lead to confusion and reduce confidence in reported information. We are concerned that proposals to make disclosures of anticipated financial effects voluntary under Option 2 would lower the overall quality and comparability of sustainability reporting. Such measures could result in fragmented disclosures across companies and jurisdictions, making it harder for users to obtain reliable and consistent information. This risks diminishing the usefulness of sustainability reports and could ultimately impede the effectiveness of capital markets in directing resources toward companies that are best managing sustainability risks and opportunities.			
Survey	Neuberger Berman	Asset manager/Investor	United States	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We believe further steps are needed to ensure full interoperability between the ESRS and the ISSB standards. As the ISSB standards provide a global baseline for sustainability disclosures, we recommend adopting them as the foundation for CSRD reporting. This would streamline the reporting process, lower costs, and incentivise voluntary CSRD reporting by enabling companies to build on their ISSB disclosures and add CSRD-specific requirements on top, particularly on impact materiality. Without equivalence or alternative compliance mechanisms, companies will need to comply with both the CSRD/ESRS and ISSB standards. This dual compliance is inefficient and resource-intensive, running counter to the goals of simplification and cost reduction. We welcome the explicit reference to IFRS industry standards (i.e. SASB standards), which will help companies align their sector-specific material risks, opportunities, and outcomes (IROs) for the financial materiality component of the Double Materiality Assessment (DMA) . These can then be complemented by other frameworks for the impact materiality side of the DMA. Before EFRAG's recent proposals, the first set of ESRS and ISSB standards achieved a high degree of interoperability. We encourage EFRAG to uphold this level of ambition and not fall below the ISSB baseline. While simplifying reporting requirements is important, it should not result in the loss of financially material information valuable to investors. We are concerned that the draft simplified ESRS introduces amendments which may undermine interoperability. For example, making quantitative disclosures on anticipated financial effects voluntary, adopting reliefs similar to those in the ISSB standards but using different terminology, and introducing new reliefs beyond the ISSB framework, could all create inconsistencies.			
Survey	Neuberger Berman	Asset manager/Investor	United States	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	With the upcoming review of the SFDR and the potential changes to Annex I PAIs, it is essential that sustainability disclosures required by the SFDR are based on data that companies already report under the CSRD. In the interim, EFRAG should ensure that the ESRS continues to include all data points linked to the 14 mandatory PAIs. These indicators are vital for the effective implementation of the SFDR and must remain accessible to all users of sustainability reporting.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The table provides a useful overview. However the column titled 'How to assess and what to report in future years' may cause confusion, as each 'future year' will eventually become the current reporting year. Restructuring the table to reflect a more time-neutral approach could enhance clarity and usability.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	An executive summary at the beginning of the sustainability statement is valuable for stakeholders - providing a clear and accessible overview of the key messages, without having to navigate the whole report.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	It's positive that the 'may disclose' datapoints have been removed, as it was uncertain what their status and applicability was. We also appreciate language improvements which have enhanced clarity and readability.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We are deeply concerned that the NMIG risks creating confusion among preparers and auditors. The lack of clarity regarding whether NMIG content should be interpreted as optional, recommended, or expected may undermine consistency and legal certainty in sustainability reporting. To ensure a clear distinction between binding requirements and supporting materials, we strongly recommend that the NMIG not be included in the Delegated Act			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the relief provided in ESRS 1 Para 91, which allows undertakings to report metrics based on partial data coverage where reliable data is only available for part of the reporting boundary/value chain. However we believe this relief should also apply to ESRS E1-6 GHG emissions which are currently excluded. Companies subject to CSRD should not be required to justify a broader scope or additional data collection efforts beyond what is already mandated by their climate commitments under internationally recognised standards. We request Para 91 be redrafted in more plain English in the interests of accessibility. Our understanding is that the intention of paragraph 91 is to clarify that both direct data and estimates can be used equally in reporting.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	We welcome the reduction in data points. However, the majority of the removed data points are qualitative in nature or fall under the category of optional "may" disclosures. The quantitative data points, which typically require the most resources to collect and report, remain largely unchanged. The qualitative data points, which typically require the most resources to collect and report, remain largely unchanged. Therefore while the total number of disclosures has been reduced by 68%, this does not correspond to a proportional reduction in the reporting burden for companies.

Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I would like to skip this question and provide my feedback in Part 3				
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree				
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	See answer to Q18.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The ESRS E4 Biodiver transition plan is critical, but the impact on the value chain is less clear.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	E2-4 Secondary microplastics. The requirement to report on the amount of secondary is not meaningful as long as no harmonised methodology has been developed at EU level. Current methodologies are costly and often unreliable. The upcoming Regulation on preventing plastic pellet losses to reduce microplastic pollution explicitly states that a standardised methodology is necessary and Art. 13 of the proposal sets out requirements for development of such a standard. This reporting requirement should be postponed until a harmonised methodology is in place at EU level.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We believe that clear and practice guidance for auditors is essential to ensuring consistent and effective implementation of this principle, without which, there is a risk the concept could be interpreted as a need to include additonal information beyond what is material. A balance is needed to ensure fair presentation enhances the quality of reporting without adding unnecessary complexity.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The goal must be to reduce emissions per activity. However, this must not lead to a decline in the level of business ambition, for example, in lending to agricultural businesses.

Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	EFRAG should refrain from reintroducing the previous AR 26 or any revised application requirements that prescribe how measurable biodiversity targets should be expressed. Given that biodiversity target-setting is a rapidly evolving area, references to "latest trends" may quickly become outdated and risk reducing flexibility for undertakings.			
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Copa-Cogeca	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The ESRS must strive for greater coherence with existing environmental legislation to avoid double reporting, and reduced environmental burdens for companies. E.g. many quantitative data points (such as use of raw materials, water, chemicals, and energy; emissions to air, water and soil; and waste generation) are already required as part of environmental permits or must be made available on the Industrial Emissions Portal - therefore a 2nd review of this data should not be necessary. Moreover, building on existing business practices (such as leveraging certified ISO management systems which are internationally recognised) can significantly reduce the administrative burden for companies already applying them. Closer alignment of sustainability reporting with frameworks that rely on management systems (e.g. under the European accreditation regulation (EC) No. 765/2008) would streamline compliance and support broader EU policy objectives by reinforcing the role of verified sustainability data across regulatory domains. ESRS 1, Chapter 5 is of utmost importance and can even be further strengthened. We highly welcome that EFRAG highlights the possibility of using primary, secondary already existing data as well as estimates equally. It is also positive that EFRAG has focused on the "own operations" of undertakings. This could be strengthened even more to demonstrate that undertakings should first analyse their own operations before seeking information from the value chain.

Survey	Eumedion	Association of financial institutions	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	To better factor sustainability issues into the assessment of risks, institutional investors need qualitative, informative, comparable and assured corporate reporting, preferably delivered through an integrated report. The DMA is key in this respect. Qualitative and material sustainability information enables investors to make better informed long-term investment decisions (and is in turn also relevant for other stakeholders). Eumedion generally supports the proposed simplification and further guidance to diminish the reporting burden and enhance comparability and relevance of information. Notwithstanding our general support, Eumedion has concerns as to how the proposed top down strategy led approach - which provides businesses with a fair amount of flexibility in choosing how the DMA is performed - will affect the comparability of the disclosed information. In order to allow investors to make informed investment decisions taking sustainability information into account, it is necessary that the sustainability reports from different investee companies are based on a common approach. Such a common approach (and as a consequence comparable reports) can only be ensured if companies are required to perform the DMA in the same manner. Furthermore, it is important to note that the members of Eumedion are required by the EU Sustainable Finance Disclosure Regulation (SFDR) to report on the principal adverse impacts (PAIs) of their investment decisions on sustainability factors. For this, they rely in large part on the information disclosed pursuant to the CSRD. Inconsistent approaches may enlarge the data gap and create an extra burden for financial market participants to comply with their own reporting obligations stemming from the SFDR.			
Survey	Eumedion	Association of financial institutions	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	A materiality assessment on the basis of gross impact is in our view preferable over an assessment on the basis of net impact. First of all, this would be a simpler methodology as the analysis would be uniform, i.e. irrespective of when the impact occurred and whether it is an ongoing action. Secondly, users of the sustainability report would be better informed if, in the case of a (gross) negative impact both impacts and remediation measures are reported. Thirdly, the proposed approach does not align with the SFDR which requires that PAIs (e.g. GHG emissions) are reported on a gross basis. Furthermore, the starting point for reporting on strategic, operational, financial and compliance risks are all reported on a gross basis. There is no reason why the approach for sustainability risks should be different from all other risk analyses. The proposed method leaves too much room for interpretation, does not promote comparability or transparency and the simplification benefits (if any) do not weigh up against the diminished informational value for stakeholders.			
Survey	Eumedion	Association of financial institutions	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	Eumedion agrees that the amendments provide relief. The amended ESRS exposure drafts however also introduce reliefs that go beyond the reliefs included in the ISSB Standards (for example the introduction of a relief for acquisitions and disposals acquired in the reporting period). This will result in a higher degree of complexity for companies that intend to comply with both standards. Eumedion believes that the ISSB sustainability reporting standards should function as a starting point or global base line for review of European standards and building blocks can be added with additional specific disclosures for ESRS. Introducing additional reliefs is therefore not favourable. Eumedion does not support the relief under point 3 as there should always be a preference for direct data as this is the most informative. Estimations should only be used if direct data are not available. With regards to point 5, Eumedion suggests maintaining alignment with the ISSB standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Eumedion	Association of financial institutions	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	Eumedion agrees with the relief for lack of data quality on metrics but believes that the current proposal does not strike an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information. In order to restore that balance we believe that a time limit should be included.			
Survey	Eumedion	Association of financial institutions	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	As a general rule, Eumedion believes that alignment with international standards, in particular with the ISSB reporting standards, is the preferred option. Furthermore, such information is necessary for financial market participants to comply with their own obligations stemming from the SFDR, i.e. to providing information on how sustainability risks are integrated in the investment decision-making process and on principal adverse impacts of investment decisions on sustainability factors. Eumedion notes that the proposed changes in ESRS 2 do not fully align with IFRS S2 (the relief related to the skills, capabilities and resources available to the company). However, Eumedion assumes that the organisations which fall within the scope of the ESRS as amended, would not qualify for such relief.			
Survey	Eumedion	Association of financial institutions	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Eumedion has always been a strong proponent of alignment and interoperability between European and international sustainability reporting standards. Eumedion is pleased to see that the reference to the IFRS industry-based guidance and the SASB Standards as a source of possible disclosure when reporting entity-specific sector information is now a permanent feature. To enhance the level playing field for multinational companies and stimulate standardised information for investors, alignment and/or compatibility with international standards is essential. That is why Eumedion is pleased to see that EFRAG has aligned the language with the international standards as much as possible. With regard to point 7, the datapoint reduction resulting in the removal of the 7 voluntary datapoints does not have a material negative impact on interoperability. 3 of the datapoints regard information which is covered by other datapoints which are maintained and with regards to the remaining 4 datapoints the deletion is justified and interoperability guidance will be provided. With regard to point 4, a global baseline for sustainability reporting through reporting standards set by the International Sustainability Standards Board (ISSB) will reduce the reporting burden on companies, while at the same time contributing to addressing sustainability challenges on a global level. Eumedion believes that the ISSB sustainability reporting standards should function as a global base line or starting point for review of European standards. Eumedion strongly believes that the EU should follow the principle 'global reporting standards where possible, additional European reporting standards where needed'. Introducing additional reliefs as mentioned under point 4 in above question, is therefore not favourable as the ISSB reporting standards can be seen as the global baseline. Eumedion is not in favour of further reliefs.			
Survey	Eumedion	Association of financial institutions	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Eumedion supports the amendment clarifying that ESRS is a fair presentation reporting framework, consistent with IFRS S1 and S2, and not a compliance framework. Adopting the fair presentation standard will bring foundational qualitative concepts from accounting, such as faithful representation and relevance, into the realm of sustainability reporting. While perhaps initially challenging for preparers and assurance providers, Eumedion feels that in due course, this will result in more meaningful, relevant and credible reporting and will lead to better decision-making by stakeholders. In this regard, efforts must be made in the near future to provide the necessary guidance, especially to assurance providers, in order to create a practical framework for applying the fair presentation standard.

Survey	Eumedion	Association of financial institutions	Netherlands	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Eumedion opposes this exception. Intensity targets do not provide the entire picture as a decrease in intensity does not necessarily mean a decrease in emissions. Both absolute and intensity targets are needed for a proper understanding of the progress on climate and its ambition. Especially taking into account the financial sector's catalytic role in addressing global GHG emission reduction, absolute targets for financial institutions remain crucial.			
Survey	Eumedion	Association of financial institutions	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Eumedion agrees as this provides more information than the current threshold.			
Survey	Eumedion	Association of financial institutions	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	Eumedion	Association of financial institutions	Netherlands	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	Eumedion suggests maintaining all SFDR indicators. The burden relief realised by the very limited proposed deletions does not weigh up against the importance of fully aligning ESRS disclosures with SFDR requirements.			
Survey	Eumedion	Association of financial institutions	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Since it now appears that Biodiversity and Ecosystems AR has been removed entirely, Eumedion would strongly suggest to review AR 26 in Amended ESRS E4. Although Eumedion fully understands that biodiversity and ecosystems are still developing, there is a need for further guidance as otherwise undertakings will not report on these topics at all or not in a uniform manner.			
Survey	Eumedion	Association of financial institutions	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Eumedion does not agree with the deletion of the voluntary datapoint in ESRS S1 on the adjusted gender pay gap and solely including the unadjusted pay gap disclosure requirement. Eumedion is in favour of including the adjusted pay gap indicator in order to serve stakeholder information needs. There is a strong correlation between the unadjusted pay-gap and the gender diversity distribution throughout the various levels in a company. Therefore, this is an important metric. However, the adjusted pay gap disclosure metric, which accounts for various factors affecting pay, also has a high relevance for stakeholders since it can showcase whether a company's equal pay policy is actually effective. Since this metric is currently not required by the SFDR, as a result both the CSRD/ESRS and the SFDR are inadequately serving stakeholder information needs. Eumedion is aware that under the new structure of the ESRS, many of the previous "may" metrics have been moved to NMIG. However the relevant paragraph of NMIG (NMIG35), does not provide for a voluntary datapoint of the adjusted pay gap. It only provides for giving context with regards to the unadjusted pay gap.			
Survey	Eumedion	Association of financial institutions	Netherlands	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	Although Eumedion supports simplification efforts, the Governance disclosure requirements have been trimmed down extensively. It is however unclear whether this will meet the objective of the CSRD in respect to the protection of SMEs since the language used and the framing of the question does not necessarily state that separate information should be provided on the payment practices with respect to SME's. Information should be provided on payment practices with respect to suppliers including SME's. The proposed metric does not provide sufficient information on payment practices with regards to SMEs in practice.

Survey	Danish Institute for Human Rights	NGO	Denmark	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Chapter 3 is improved compared with set 1. Three observations and one concern however: In emphasising materiality of information it is essential to ensure it is essential to safeguard paragraph (para) 21b. This element of the definition is critical to balance impact and financial materiality dimensions and ensure alignment with international standards on sustainability due diligence (incl. UN Guiding Principles on Business and Human Rights (UNGPs)). The UNGPs clarify the responsibilities of business to communicate about their negative impacts and how they are managing them in a manner that sufficiently allows externals to evaluate the adequacy of the business' efforts (UNGP 21). DIHR is against making some users 'primary' and caution against any dilutions or deletions of para 21b. DIHR further welcomes the emphasis on the interrelation between companies' DMA and sustainability due diligence, engagement with affected stakeholders and the relevance of the severity criteria. This is key to ensuring alignment with the UNGPs as well as interoperability with the EU Corporate Sustainability Due Diligence Directive (CSDDD). We caution against any dilutions or deletions of such content. DIHR welcomes appendix A, and notes the importance clearly emphasising it's status as a non-exhaustive list and making the connection to entity specific reporting. Not all human rights impacted by companies or covered by the CSRD and CSDDD are captured by the list. DIHR cautions against further weakening the importance of the annex and recommend making clear that the previous sub-sub-topics for Social are non-exhaustive. Finally, para 22 allows entities to present sustainability information at topical level. DIHR is concerned with possible over-aggregation, resulting in very high-level disclosures that may undermine 'understandability' (para 21b) and comparability. The original focus on IRO level disclosure should be maintained, allowing still some flexibility for how to describe IROs.			
Survey	Danish Institute for Human Rights	NGO	Denmark	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	DIHR largely supports the substantive content of paras 34 to 36 and appendix C. However, the drafting is not sufficiently clear and consistent. For example, the reporting year aspect is clear in the Appendix, but not in the main body paras. Further para 34 and 35 can be read to imply 'default net', whereas the table mostly instructs gross for potential impacts. A 'default net' approach is problematic as. if abused, it may lead to underreporting of negative impacts, undermine transparency objectives of the CSRD and hinder information access by users. Elements of 'the gross approach' are likely to be necessary for users to understand the undertaking's material impacts and how it identifies and manages them and hence critical to para 21 b. DIHR recommends that a) appendix C is the benchmark for further adjustments to principled descriptions in paras 34-36; b) the gross approach is kept when impacts require significant ongoing actions OR where there is not supportable evidence of the effectiveness of actions; c) that the terms 'gross and net' are avoided; d) that interrelation with severity and likelihood assessment is considered. Assessing likelihood also involves considering preventative and mitigating actions and it is not clear how this interplays with the new gross vs net consideration and finally that e) the interrelation between a net approach and allowing disclosure of non-material information is considered.			
Survey	Danish Institute for Human Rights	NGO	Denmark	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	DIHR generally supports the approach taken to implement Lever 2.			
Survey	Danish Institute for Human Rights	NGO	Denmark	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	DIHR welcomes the significant reduction in overlap across the cross-cutting and topical standards. DIHR further welcomes that the four part stakeholder structure for the social topics have been maintained. DIHR however shares two specific comments: First, to ensure full consistency across GDRs and related topical level reporting for social as it relates to metrics, 'metrics' should be incorporated in SX-4 on targets across the four social standards, thereby making this disclosure requirement about 'targets and/or metrics' rather than just about targets. Metrics are mentioned in S2-S4 objectives and the heading before SX-4 reads 'metrics and targets', but metrics are not included in S2-S4 DRs. The AR in GDR-M specifying that entity-specific metrics can be developed for S2-S4 is insufficient. Instead, making explicit reference to metrics directly in S DRs can a) improve consistency across ESRS 2 PATM and topical; b) compensate for the lack of predetermined metrics in S2-S4 and the unlikely provision of such by sector standards; c) recognize emerging trends observed for S2-S4 in year-1 reports on entity specific metrics (see also BCG State of Play report p. 31-32); and d) acknowledge the use by companies of metrics in their social sustainability impact management and monitoring efforts (oftentimes more common that use of targets). Inspiration can be found in approach taken to metrics in E4-5 para 21. Secondly, DIHR regrets the shift from the original disclosure requirement in environmental standards related to materiality assessment concerning site and asset-level screening to an AR in draft ESRS 2 IRO-1. Context matters for environmental impacts such as polluted water streams and related impacts on local communities. DIHR recommends the site or location specific aspect of DMA is brought in as a direct datapoint in IRO-1 ideally not relevant to E standards only, due to its relevance to communities - S3.			
Survey	Danish Institute for Human Rights	NGO	Denmark	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	DIHR only partially agrees with the deletion of all may-disclose datapoints. For the social chapters, some may-disclose datapoints were of particular relevance to capturing impacts and efforts related to vulnerable stakeholders such as non-employees or part time workers. Several of these stem from GRI standards and hence can be useful to retain for interoperability with impact disclosure frameworks. Such may-disclose datapoints or ones that provide an illustration of emerging good practice, should be included directly in the Standards as examples, rather than in the NMIG where they risk being overlooked.			
Survey	Danish Institute for Human Rights	NGO	Denmark	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	DIHR finds that the NMIG contains helpful guidance and is concerned that the 'non-mandatory' framing may undermine its usage. For social, so-called ID-177 is a very useful guidance document, now sitting at NMIG level. This and other key elements of NMIG should be given appropriate authoritative status ideally within the delegate act.

Survey	Danish Institute for Human Rights	NGO	Denmark	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	DIHR is concerned with the cumulative or compounded effect of the different horizontal reliefs introduced. It is not clear how the different reliefs interact with one another or with other new elements in the amended ESRS around fair presentation or materiality of information. For example, what is the interaction between 'undue cost and effort' and 'fair presentation'? It is important that the standards promote an appropriate balance. DIHR also recommends that proportionality is required in relation to the 'undue costs or effort' relief, i.e. that its utilization is proportionate to related sustainability impacts. DIHR encourages EFRAG to further analyse the boundaries of the individual reliefs, their interrelations as well as their cumulative effect and consider whether they, alone or together, go too far. Such analysis should among other things consider the ultimate effect on metrics-reporting by companies, including in light of the EC's instruction for the ESRS review to emphasize quantitative reporting over qualitative. Concretely the relief in Para 90 will be read to mean that non-employee reporting is only required if non-employees, are a significant part of your workforce. This is a concern given the vulnerability of non-employees and how in big companies even a 'non-significant' proportion of the overall workforce can be a lot of people. Using this relief on S1-5 is not appropriate. In addition, DIHR is concerned that the reliefs may in practice undermine the standards' scope covering impacts across both own operations and upstream and downstream value chain, where oftentimes some of the more severe human rights impacts are to be found, due to the different reliefs related to value chain metrics. Where reliefs will remain, DIHR recommends further inclusion of time limits on their use along with explicit emphasis on how progressive improvement over time is expected.			
Survey	Danish Institute for Human Rights	NGO	Denmark	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	As declared in response to question 17, DIHR is concerned with both individual and joint effect of the different reliefs introduced. This includes the relief for metrics with poor data quality, in particular its extension to also cover metrics for own operations. Companies are typically well-positioned to access data of sufficient quality and/or have sufficient influence to improve data quality within a reasonable time period. As such, we support the SRB members' suggestion to include a time limit on the relief incentivizing progressive improvement and temporary use of this relief and improving interoperability with IFRS in this regard.			
Survey	Danish Institute for Human Rights	NGO	Denmark	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Estimating financial effects is a key lever for incentivizing companies to integrate sustainability into business strategy, planning, risk management and decision making. It is also key to investors, other financial market participants and 'primary users' of sustainability information. At the same time, estimating financial effects can be a challenging task for companies and can be methodologically difficult. Rather than not requiring disclosures as a result, stressing the need to disclose on methodology and information uncertainty is recommended to address the latter point. Option 2 goes too far in both ruling out quantification and making it a voluntary disclosure requirement without having to meet any related conditions. Diluting 'financial effects' to this extent is at risk of undermining the fundamental CSRD objective of putting sustainability reporting on the same level as financial reporting and better integrating the two reporting disciplines. Interoperability with IFRS is another reason to go for option 1.			
Survey	Danish Institute for Human Rights	NGO	Denmark	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	DIHR is not supportive of introducing reliefs in ESRS that go beyond already existing IFRS reliefs. This is to support interoperability, avoid double reporting concerns and increase comparability. In addition it will be important to avoid starting a 'race to the bottom' between ESRS and IFRS as it relates to aligning reliefs across the standards. The switch from a compliance approach to one of 'fair presentation' marks a big shift and an overall reliance on business judgement. With it comes heightened responsibility on the companies to act in good faith. If not, the framework will lose its ability to underpin the necessary exchanges between preparers and users and ultimately the much needed factoring in of sustainability in business decisions. The many reliefs combined with unclarity of what fair presentation entails in an impact context, brings the risk that the standard opens itself to abuse by those not acting in good faith or those with limited faith in the value of the reporting exercise, thereby ultimately hindering the ability of the measure to achieve its stated sustainability objectives. Therefore the importance of the fair presentation principle needs to be stressed and underpinned and further reliefs than IFRS should be avoided.			
Survey	Danish Institute for Human Rights	NGO	Denmark	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Danish Institute for Human Rights	NGO	Denmark	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	DIHR supports the retained "shall disclose" datapoints while noting that the Amended ESRS offers a significant reduction. Given the materiality principle one could have kept more datapoints whilst emphasizing the 'if material' aspect, which on some accounts would have been preferable to the blanket deletion. The amended ESRS represents the minimum necessary to ensure meaningful reporting meeting users' needs, allowing comparability and underpinning needed analysis and dialogue on companies' sustainability impacts and efforts crucial for the CSRD objectives and the Green Deal.			
Survey	Danish Institute for Human Rights	NGO	Denmark	22.S1	Comments on deleted datapoints in ESRS S1	I partially agree and partially disagree	A number of S1 datapoints have been deleted without sufficient reasoning. We recommend that the following elements are reinstated: S1-8: age distribution S1-10: parental leave instead of just maternity leave as well as retirement S1-14: employees that took family related leave			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Danish Institute for Human Rights	NGO	Denmark	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	DIHR finds these to be justifiable exceptions.			
Survey	Danish Institute for Human Rights	NGO	Denmark	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	DIHR finds these to be justifiable exceptions.			
Survey	Danish Institute for Human Rights	NGO	Denmark	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	DIHR welcomes overall the increased and explicit emphasis on 'fair presentation'. It does however recognize that 'fair presentation' is less established in the context of reporting on impact materiality and auditing impact materiality reporting than in the context of financial reporting. This is not a reason to reassess the utility of the concept, but rather a reason to address this in guidance efforts aimed at both preparers and auditors.			
Survey	Danish Institute for Human Rights	NGO	Denmark	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Granting an exemption would undermine the sector-agnostic approach of the standard. Other industries could equally argue for exceptions based on their own difficulties. Absolute targets are needed to ensure robustness of targets and that information disclosed is understandable and comparable. It is further aligned with SFDR.			
Survey	Danish Institute for Human Rights	NGO	Denmark	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	DIHR supports this changed threshold and finds it both simpler than the previous version as well as an improvement in substance as some companies, due to their business models, were disclosing employee information on very few countries despite being present in very many/ having very large employment numbers. The set 1 approach in other words allowed (some) companies to only disclose a fraction of their total employees. Country level breakdowns are helpful contextual information for users that can qualify the reading and interpretation of the remaining S1 disclosures.			
Survey	Danish Institute for Human Rights	NGO	Denmark	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The methodology for calculation of non-EU adequate wages is problematic and needs amendment. As a national human rights institution, DIHR is critically aware of the challenges for the millions of workers living in poverty notably because of the failure of wages, including in many jurisdictions statutory minimum wages, to constitute adequate or living wages. Workers in and outside EU have a human right to an adequate standard of living, meaning sufficient remuneration to support themselves and their families in a life of basic dignity. The draft introduces unequal treatment of workers within and outside EU, disadvantaging non-EU workers. There are two main issues with the suggested non-EU methodology: oit incentivises use of legal minimum wage, oftentimes much lower than an adequate wage oit puts the task on each company to assess whether a certain wage in a certain country meets different add-on requirements Re the first point: The ILO Wage setting principles quoted in AR 22 are not a sufficient 'adequacy check', given they focus on the process of setting wages, rather than on the result of whether the wage is adequate or not. The latter is at the heart of the objective of S1-9. Instead, the drafting should refer to the ILO Principles for Estimating a Living Wage as the relevant benchmark for both statutory minimum wages or any other living wage estimates. Re the second point: the drafting should put the burden on the public authorities or the living wage data providers to provide evidence on alignment with the ILO Principles for Estimating a Living Wage rather than leave this task with individual preparers.			
Survey	Danish Institute for Human Rights	NGO	Denmark	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	DIHR welcomes and supports the approach taken in relation to SFDR datapoints relevant to the social standards, including to consolidate human rights policy reporting in ESRS 2. It would encourage future review of the SFDR PAIs to take into account the amended ESRS, thereby improving consistency across disclosure regulations further.			
Survey	Danish Institute for Human Rights	NGO	Denmark	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	DIHR agrees to make the unadjusted mandatory. DIHR however suggests to specify in AR or in the NMIG that adjusted pay gap can be an important additional entity-specific disclosure to contextualise and enable improved understanding of the unadjusted pay gap disclosures thereby encouraging this additional disclosure. In practice many companies report both.

Survey	Danish Institute for Human Rights	NGO	Denmark	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	DIHR recognizes EFRAG's efforts for the amended ESRS to strike a balance between simplification and meeting the core objectives of the European Green Deal. However, in ESRS 1 DIHR is concerned with the effects of the many different reliefs when read in combination with a switch from a compliance approach to a principles based approach. Not least where reliefs go beyond those in the IFRS standards. Robust anchorage of the fair presentation principle and its implications is key to ensuring a balanced approach.			
Survey	Danish Institute for Human Rights	NGO	Denmark	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. I partially agree and partially disagree	For S1 DIHR has strong concerns on adequate wage methodology for non-EU employees and the related potential backstepping it can incentivize amongst companies otherwise committed to addressing concerns around in-work poverty as well as the potential greenwashing it may introduce by permitting companies to simply benchmark wages with minimum wages, including where these are not adequate. In addition, a number of S1 datapoints have been deleted without sufficient reasoning. We recommend that the following datapoints are reinstated in S1 metrics: S1-8: age distribution S1-10: parental leave instead of just maternity leave + retirement S1-14: employees that took family related leave

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Verisure	Preparer (non-financial preparing a sustainability report)	Switzerland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	This point then is not clear anymore. How could ESRS 2 be subject to the filter of materiality now as the rest of the topical standards? 2. We agree with both perspectives suggested in the new paragraph 28 3. Paragraph 36. So, should this be understood as meaning that, depending on where the negative impact originates and how it is mitigated, we may change the very nature of the impact itself? This seems a bit confusing. 4. AR 18 for para. 48 (Practical considerations) - useful			
Survey	Verisure	Preparer (non-financial preparing a sustainability report)	Switzerland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	(Paragraph 48) Anticipated financial effects remain a problem. This is still a complicated issue for companies to report on, given the lack of information and a high degree of uncertainty.			
Survey	Verisure	Preparer (non-financial preparing a sustainability report)	Switzerland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Major comment: 1. Paragraph 17. This point is still a problem in terms of disclosure - can we report goals regarding different pillars insted of a link to significant groups of products and/or services? 2. Paragraph 18. Value Chain's description tends to be broader - shall we guess we only have to report the main phases of the VC? 3. AR 7 for par. 17(b). what's the point of this? How would be this point audited?			
Survey	Verisure	Preparer (non-financial preparing a sustainability report)	Switzerland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	23 a - Even so, this is very complex information to disclose. From our point of view, it is better to remove it.			
Survey	Verisure	Preparer (non-financial preparing a sustainability report)	Switzerland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Verisure	Preparer (non-financial preparing a sustainability report)	Switzerland	22.E5.	Comments on deleted datapoints in ESRS E5	I agree	18 e. In case the undertaking cannot disclose this information because of unknown data from source of info (eg., recycling partners), what should we approach this?			
Survey	Verisure	Preparer (non-financial preparing a sustainability report)	Switzerland	22.S1	Comments on deleted datapoints in ESRS S1	I agree	23 d. is it possible to give different figures regarding the total number of employees during the FY?

Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We partly agree. The AFM would like to place critical remarks in relation to the proposed revisions to the DMA process. 1In the AFM's view, ESMA justifiably notes that the draft revision introduces a confusing difference in describing materiality, beyond the double materiality perspective. The revision states that information is material for 'primary users of financial reports' (e.g. investors) if the information may be capable of affecting their decisions. This is the standard view of material information. Oddly, the revision provides a wholly different criterion for material information for 'other users of general purpose sustainability statements' differently, namely that the information enables an understanding of the material impacts, risks and opportunities (IROs). This second criterion for assessing materiality constitutes a different threshold for identifying materiality. We suggest to avoid creating an artificial and rather complex distinction between two different layers of materiality of information, as well as avoid a conceptual conflict between the notion of materiality of information and the notion of relevance in the qualitative characteristics of information. Both financial materiality and impact materiality can be assessed by the single criterion that the information presented has the ability to affect the decision-making by the users of the sustainability report, regardless of whether these users are investors or other types of stakeholders.			
Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We partly agree. The AFM notes that improvements have been made in this respect. However, interactions between topics is not sufficiently explained. Such interactions are so common (not only within the E and S topical categories but also from E to S and vice versa), that we believe ESRS 1 or 2 should address such interactions. Currently - For the E standards it is not clear how the interaction should be approached and the interaction between E and S standards is very summarily and incompletely addressed (mostly restricted to E1 and S relating to 'just transition). We refer for instance to par 11 of ESRS E2 and par 10 of ESRS E4 – it is very unclear how this affects reporting. E2 – E 5 interact with social standards as well. Water flows and particles move (pfas has been detected in rainwater) and therefore E2 (pollution) does affect communities (and workers in the value chain, especially agriculture and mining. Biodiversity impacts (land use change, invasive species, threatened species) similarly affect communities. Products containing toxic materials may affect consumers. ESRS 1 or 2 should elaborate on these interactions.			
Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The AFM agrees in general that the proposed amendments improved the understandability, clarity and accessibility of the standards. We do however have two observations in this respect that we would like to share. Firstly, the AFM notes – as does ESMA – that some repetition is retained in the revised standard (e.g. in the application requirements AR 15 of S1-6 concerning the use of estimates, mandated by mandatory ESRS 1 requirements, when a company is not able to report exact figures on their non-employees, as well as in AR 39 of S1-16). Reminders can be useful, but not if they are placed seemingly 'randomly' throughout the standards. Placing a reminder about a general provision by a particular DR and not by many others to which the provision equally applies, can lead to confusion over where the provision can/should be applied elsewhere as well. We therefore recommend that either: i. an explanation is given why this general provision is particularly relevant to the particular DR's by which the reminder is placed; ii. the reminder is placed at the start of each topical standard; or iii. the reminder is removed completely. Secondly, again echoing ESMA, the AFM would like to see clarified the proposed par. 22-ESRS 1 which indicates that "information shall be presented either at topical or impacts level, risks and opportunities level, depending on what provides the most relevant information, such as reflecting their nature or the way they are managed". EFRAG should make clear unambiguously that the main aim is that companies provide material information on IRO's which pertain to different topical areas, rather than they simply report on sustainability topics related to material IROs. In general, identifying sustainability-related IRO's should be the starting point of sustainability reporting, regardless of the specific topics to which they may pertain.

Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We partly agree. In relation to Resilience to environmental risks: The AFM is of the view that the resilience of the company's operations and value chain to environmental risks is important for investors. Disclosure of resilience is included in ESRS E1 regarding risks associated with climate change, but a similar requirement is not present in other topical standards where they are relevant such as E3 (Water) and E4 (biodiversity and ecosystems). The AFM recommends that those topical standards also require a disclosure requirement on resilience.			
Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We agree with Option 1. The AFM supports quantitative reporting on anticipated financial effects. In par. 23 of ESRS 2 (SBM-3), ESMA offers 2 options concerning the reporting of anticipated financial effects of material sustainability impacts and opportunities. Only option 1 makes quantitative reporting on these effects mandatory (on condition of feasibility). The AFM strongly supports a requirement to provide quantitative information on anticipated financial effects, whenever feasible, and thus supports option 1. Quantifying this information is essential to investors. It is also necessarily for adequate alignment with ISSB standards. In our view, companies should start reporting quantitative information on these anticipated effects as soon as possible, as this is one of the key rationales of sustainability reporting from an investor's perspective. We therefore would not support any further delay of the application of such a requirement, beyond the delay already granted in the "quick fix" delegated act.			
Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We agree. Echoing ESMA, the AFM express strong support for the newly included paragraphs 16 and 18 in ESRS 1 that emphasize the importance of fair presentation. The strengthened framework on fair presentation will be beneficial to the overall assessment of investors and users regarding the undertaking's sustainability-related impact, performance and risk-opportunity balance. It furthermore aligns with standard financial reporting practice and with the ISSB reporting framework.			
Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The AFM commends EFRAG for the simplifications it proposed while keeping most key elements crucial to the Green Deal objectives in place. We do however see two important elements which are currently missing in the revised ESRS, relating to the environmental topics E1-E5 and one element for potential (Social Standards) further simplification.
